This brand new edition of *The US Military Profession into the Twenty-First Century* re-examines the challenges faced by the military profession in the aftermath of the international terrorist attack on the United States on September 11, 2001. While many of the issues facing the military profession examined in the first edition remain, the 'new war' and international terrorism have compounded the challenges. The US military must respond to the changed domestic and strategic landscapes without diminishing its primary function—a function that now many see that goes beyond success

on the battlefield. Not only has this complicated the problem of reconciling the military professional ethos and *raison d'être* with civilian control in a democracy, it challenges traditional military professionalism. This book also studies the notion of a US military stretched thin and relying more heavily on the US Federal Reserves and National Guard. These developments make the US military profession increasingly linked to public attitudes and political perspectives. In sum, the challenge faced by the US military profession can be termed a dual dilemma. It must respond effectively to the twenty-first century strategic landscape while undergoing the revolution in military affairs and transformation. At the same time, the military profession must insure that it remains compatible with civilian cultures and the US political-social system without eroding its primary function. This is an invaluable book for all students with an interest in the US Military, and of strategic studies and military history in general.

An unflinching portrait of modern conflict by renowned photographer Sean Smith Working both

independently and embedded with the U. S. and British militaries, Sean Smith has compiled a shocking and unique portrait of modern combat and its aftermath. These pictures take us right into the midst of contemporary war zones and offer a unique insight into the reality of life in the crossfire. "Frontlines" begins with violence on the streets of Bethlehem in 2000 as Palestinian youths clash with Israeli soldiers. Smith catches fascinating glimpses of life in Afghanistan before the U. S.-led invasion as well as the faltering attempts of Afghan police and the U. S. military to maintain a fragile peace in the face of Taliban insurgency. He takes us into the utter devastation of Lebanon in the wake of Israel's brutal bombardment in 2006. And in Kiwanja in the Congo, thousands of refugees struggle on the edge of survival and civilian bodies litter the streets amid bitter clashes between the government and Tutsi renegades. But it is to Iraq, the most divisive of conflict of modern times, that Smith's work most often returns. He shows us a society nervously holding itself together under the shadow of U. S. assault in 2002. The images follow a crescendo of violence building through the Sunni uprisings of 2007 and the consequent surge as the U. S. army

attempts to regain control over an increasingly desperate and violent rebellion. Smith's pictures are both a vivid contemporary document and a worthy contribution to the great tradition of war photography, laying bare the reality of modern conflict with a clarity that is impossible to ignore.

"Captain Paul K. Chappell has given us a crucial look at war and peace from the unique perspective of a soldier, and his new ideas show us why world peace is both necessary and possible in the 21st century." Nobel Laureate Archbishop Desmond Tutu "Paul K. Chappell has transformed my way of thinking about war and peace." -Lt. Col. (ret.) Dave Grossman, author of *On Killing*, and Director of the Warrior Science Group Once in a great while, a book is written that substantially changes the way people think about a particular subject. *Will War Ever End?* is such a book. Written as a "manifesto for waging peace" by an active duty captain in the US Army, *Will War Ever End?* challenges readers to think about peace, war and violence in radically new ways. "Are human beings naturally violent?" "What is hatred?" "How can love overcome the power of hatred?" "How does nonviolence overcome the power of violence?" "How can we prove that unconditional love makes us psychologically healthy and that hatred, just like an illness, occurs when something has gone wrong?" "How does violence against the natural world relate to violence between human beings?" These are all questions that Captain Paul K. Chappell leads us to consider in a strikingly new way. In *Will War Ever End?*, Chappell demonstrates that human beings are naturally peaceful and that world peace can become more than a cliché. He lays out a practical framework for transforming the way we think about war and violence, enabling us to begin the real work we must do in order to achieve true peace for mankind. *Will War Ever End?* is a deeply personal story of a soldier's search for human understanding that will lead to universal transformation. Its message is one of hope, offering practical solutions to help us build a better world. We can all make change. Now is the time to begin.

This new work defines national security strategy, its objectives, the problems it confronts, and the influences that constrain and facilitate its development and implementation in a post-Cold War, post-9/11 environment. The authors note that making and implementing national strategy centers on risk management and present a model for assessing strategic risks and the process for allocating limited resources to reduce them. The major threats facing the United States now come from its unique status as "the sole remaining superpower" against which no nation-state or other entity can hope to compete through conventional means. The alternative is what is now called asymmetrical or fourth generation warfare. Drew and Snow discuss all these factors in detail and bring them together by examining the continuing problems of making strategy in a changed and changing world. Originally published in 2006.

Following on from *Custom Maid Spin*, Peter de Krassel turns his unique international perspective and controversial pen onto the business of war. In the course of reviewing the conflicts of the 20th century and today, he argues that to end, or at least minimize, the cycle of 21st century violence humanity is inflicting on itself, America must lead the peaceful charge for change. To do so Americans need to learn and understand the reasons for war and how future wars can be stopped. War is no the answer as hunger, oil, territorial expansion, ethnic cleansing or the survival of America. On the contrary it is its escalating destructive downfall. He points to China's re-emergence as a global power as America's greatest challenge - and one that must be resolved peacefully. America must keep in mind the warning by the Greek historian Thucydides, more than 2,000 years ago, that belief in the inevitability of conflict can become one of its main causes. In other words, America cannot afford to become a victim of its own political spin " Peter de Krassel's treatment on war reads like a journalistic account of *Heart of Darkness*. We are like Marlow, journeying down a political river, with each chapter forcing us to shed another layer of ignorance in order to acquire new insight. But this work also brings with it a sense of hope, for we the people are capable of molding our own destiny, as long as we have the wisdom and courage to change things." Brandon Royal, Author, *The Little Red Writing Book* "An anecdotal and passionate polemic on modern history. An unabashed racy weltanschauung that would not sit well on a White House shelf." Stuart Wolfendale, Columnist, *The Standard* Peter deKrassel was born in England of a Russian father and Palestinian Jewish mother. He has lived all over the world, including Switzerland, Israel and the United States. Currently he lives in Hong Kong. He has a unique perspective on world events both from the influences of the places he's lived in and the people he

has met, as well as from his varied career in the law and the media.

Today, war is more complicated than it has ever been. When considering military strategy, a commander must be aware of several theaters of war. There's ground strength, air power, naval combat and even cyber warfare. In the late 19th century, however, the true military might of a nation rested primarily on the strength of its navy. In 1890, United States Navy Captain Alfred Thayer Mahan published a book titled "The Influence of Sea Power Upon History." The monumental text addressed the importance of both military and commercial fleets in the success of a nation in war and peacetime. Mahan begins with a discussion of the elements he considers to be the key to a nation's success on the seas. He theorizes that a ground force could not sustain the pressure of a naval blockade. Mahan then applies his principles to wars of the past. He analyzes the use of a navy in various engagements and considers the resulting influence on the outcome of the wars. The book was readily accepted by commanders and tacticians all over the world and his principles and theories were utilized throughout the 20th century. His arguments, along with technological advances, were influential in the strengthening of the United States Navy. Presently, Mahan's work is considered the most important work on naval strategy in history.

This is the latest edition of a U.S. Army field manual (FM 23-10) covering sniper training. The introduction states: "The sniper has special abilities, training and equipment. His job is to deliver discriminatory highly accurate rifle fire against enemy targets, which cannot be engaged successfully by the rifleman because of range, size, location, fleeting nature, or visibility. Sniping requires the development of basic infantry skills to a high degree of perfection. A sniper's training incorporates a wide variety of subjects designed to increase his value as a force multiplier and to ensure his survival on the battlefield. The art of sniping requires learning and repetitiously practicing these skills until mastered. A sniper must be highly trained in long-range rifle marksmanship and field craft skills to ensure maximum effective engagements with minimum risk. The primary mission of a sniper in combat is to support combat operations by delivering precise long-range fire on selected targets. By this, the sniper creates casualties among enemy troops, slows enemy movement, frightens enemy soldiers, lowers morale, and adds confusion to their operations. The secondary mission of the sniper is collecting and reporting battlefield information. A well-trained sniper, combined with the inherent accuracy of his rifle and ammunition, is a versatile supporting arm available to an infantry commander. The importance of the sniper cannot be measured simply by the number of casualties he inflicts upon the enemy. Realization of the sniper's presence instills fear in enemy troop elements and influences their decisions and actions. A sniper enhances a unit's firepower and augments the varied means for destruction and harassment of the enemy. Whether a sniper is organic or attached, he will provide that unit with extra supporting fire."

This book examines the use of military force as a coercive tool by the United States, using lessons

drawn from the post-Cold War era (1991–2018). The volume reveals that despite its status as sole superpower during the post-Cold War period, US efforts to coerce other states failed as often as they succeeded. In the coming decades, the United States will face states that are more capable and creative, willing to challenge its interests and able to take advantage of missteps and vulnerabilities. By using lessons derived from in-depth case studies and statistical analysis of an original dataset of more than 100 coercive incidents in the post-Cold War era, this book generates insight into how the US military can be used to achieve policy goals. Specifically, it provides guidance about the ways in which, and the conditions under which, the US armed forces can work in concert with economic and diplomatic elements of US power to create effective coercive strategies. This book will be of interest to students of US national security, US foreign policy, strategic studies and International Relations in general.

Two Centuries of US Military Operations in Liberia Xlibris Corporation

The United States is at a crossroads. Despite a defense budget that dwarfs that of any of the nation's rivals, the marginal return on this investment has decreased dramatically since the end of World War II. Why? Why have America's rivals, despite inferior resources, increasingly set the terms of international competition? How might America's leaders reconsider the application of power to ensure a favorable place on an increasingly crowded global stage? By tracing the geographic and historical development of four global actors—Russia, Iran, China, and the United States—Phillip T. Lohaus illuminates four equally distinct approaches to competition outside of warfare. He argues that while America's actions may have birthed information as a currency of power, the nation's failure to fully grasp the implications of this transition has created critical opportunities for its rivals to increase their power at the expense of the United States. The American way of competition, rooted in a scientific understanding of warfare, may impede effectiveness in the amorphous and unscientific landscape of twenty-first-century competition. From Rome to Britain, complacency has contributed to the downfall of many empires. Yet the slow bleed of American power may still be stanching by an approach to competition that emphasizes subtlety, diffusion, and ubiquity. America has developed and used these tools in the past—its very survival may hinge on returning to them. Power and Complacency defines the differing perspectives of America's international conflicts and offers possible solutions for reformulating its superpower strengths.

The purpose of this research paper is to introduce a new national security strategy and military force structure for the 21st century. The strategy, called 'Dynamic Response', is based on defending clear and unequivocal national interests which are defined in the paper's discussion of America's 'national security estate'. The authors contend that decisions on the size and shape of the US forces must rest on an enduring logic which is both clearly understood and endorsed by government institutions and the public. Without this logic--provided by the strategy of Dynamic Response--support for the military could erode, contributing to the gradual hollowing out of American forces and fostering an international environment that invites aggression. The proposed strategy of Dynamic Response is placed firmly within the context of the evolving geopolitical landscape. The paper examines four of the most significant post Cold War forces that are fundamentally reshaping this landscape: the demise of ideology; the impact of the domestic economy on military power; the cartelization of geopolitical structures; and the acceleration of global socio-cultural change. To deal with these forces. a new national security strategy is required, grounded in the defense of the 'national security estate'. This estate is made up of those regions of the world which are necessary to the survival of the US as a free and economically viable nation.

The Information Revolution and Post-modern Warfare 21st Century U.S. Military Manuals U.S. Coast Guard (USCG) Rescue and Survival Systems Manual--Surviving Without a Raft, Skills, Swimmer Equipment, PFDs, Vests, Clothing, Beacons, Buoys Part of our value-added professional format

series of U.S. military manuals, this U.S. Coast Guard (USCG) rescue and survival systems manual covers survival skills and equipment for water survival. It has specific, detailed information about survival skills (what to eat, how to survive without a raft) and equipment, including buoys, beacons, clothing, vests, and more. This manual contains the information necessary for the proper administration of the unit's rescue and survival systems program. It defines operational requirements, and directs specific policies related to procurement, required maintenance, procedures, and documentation necessary to meet Coast Guard personnel survivability and operational safety needs. Survival is the "preservation of one's own life under conditions of immediate peril." To preserve one's own life at sea requires the ability to live through extreme conditions of emotional and physical shock, and hardship for an indefinite period of time. When faced with an open water survival situation, it is important to remember that environmental obstacles are as much mental as physical. Before accumulating information on the use and operation of survival systems, it is important to first understand the psychological barriers to the will to survive that must be overcome. The most predominant psychological barrier to survival is fear: fear of the unknown, fear of discomfort, and fear of one's own weakness. Fear of the environment in an open water situation leads us to fear our own chances of survival, and even though we overcome these fears to some extent, a lack of confidence in our ability may weaken our will to survive. Studies of survivors and their experiences show that the successful survival of any situation depends on several factors. As a bonus, this reproduction includes the Marine Corps Manual, the basic publication of the United States Marine Corps issued by the Commandant of the Marine Corps and approved by the Secretary of the Navy - sold separately for \$7.99. It is a regulatory publication for the Department of the Navy as defined in U.S. Navy Regulations. The Marine Corps Manual is designed primarily for use by Marine Corps commanders and their staffs, Navy officers exercising command over Marines, the staff of the Commandant of the Marine Corps, and the staffs of the bureaus and offices of the Navy Department. Contents: Chapter 1 - General Administration And Management * Chapter 2 - Manpower * Chapter 3 - Operations And Readiness * Chapter 4 - Logistics 21st Century U.S. Military Manuals Afoot in the Desert Field Manual, Desert Survival, Deserts of the World U.S. Marine Corps - FMFRP 0-53 Afoot in the Desert, Desert Survival, Deserts of the World Marine Corps Field Manual (FMFRP 0-53) provides information about individual survival in desert theaters of operation. This manual explains some scientific theories on how plants, animals, and humans adapt to dry climates. It deepens understanding of how individuals may live, travel, and conduct themselves with others they may meet in the deserts. A survival expert once said, "The Arabs don't know much about survival in the desert." Of course not! They just live there! You can live there too if you get rid of fear, forget the superstitions and popular fallacies you learned from desert adventure romances, and know a few of the facts of life about deserts. Respect the desert but don't be afraid of it. Don't keep water in your canteen and weaken yourself when you can drink that water and maintain your efficiency. Would you be so foolish as to sap your strength by purposely cutting an artery just so you could practice using a tourniquet? Of course not. Learn the facts about your body needs of water and practice the horse sense those facts will give you. Separate truth from the old wives' tales about the lands of little water. If you do that, you may get to like the desert instead of fearing it. Battlefield of the Future - 21st Century Warfare Issues

You're never a true soldier until you have tasted guerilla warfare! The art has been welcomed throughout the ages; the knowledge are immortalized and transformed through decadence of participatory spirits. Gone but not forgotten are those remnants in history who have captured its essence and use it profusely within their specter for whatever their causes possess. Guerilliarism science is a combine study of all elements surrounding its attributes. Both study of societal behaviors and ones deemed by military prowess were combined formidably for the uses of individuals who participate or are now learning its traits. It covers the most highly doctrinated academia and was summarized to the basics for greater understanding to the participants. The

arts and sciences yet again are immortal and used frequently throughout time. These times are no exceptions for its usage. No need to wear a uniform and pledge allegiance to an oat to country but an oat to oneself to survive any calamity within your space and provide a place of sanctuary to protect the space; is an intrinsic, basic and a form of normality. No need to be learnt about the subject matter of guerilla, it's in all essential beings to harness the within to the outer. This book would introduce to the reader an inceptive thought to gather the power within knowledge, thereof are possessive in the field of study in academics theory, manipulated to adjust to the environmental study of human behavior. Human behavioral science of accepting the throne of mathematics in warfare, geography planning and coordinates, spiritual sciences, warfare and gathering intelligence, the skills to combat in close quarters engagement and music to fill the spirit of aggression. These are just some of the feeding programmed of aggression and sciences this book portrays. Read and declare perfect understanding to what a guerilliarist is mentioning and further your thoughts and intellect to survive the "21st century aggressions" of world powers and societal powers fighting to emanate the diverse of powers. A son of guerilla no doubt, had to do my own profession to enlighten the 21st century populist that guerilla warfare can be adapted to any ones particular lifestyle. Be one of them who shall survive and continue to the future! The more guerilla fighters we have the better!

The New Total War of the 21st Century Rand Corporation

For more than a century, no US adversary or coalition of adversaries - not Nazi Germany, Imperial Japan, or the Soviet Union - has ever reached sixty percent of US GDP. China is the sole exception, and it is fast emerging into a global superpower that could rival, if not eclipse, the United States. What does China want, does it have a grand strategy to achieve it, and what should the United States do about it? In *The Long Game*, Rush Doshi draws from a rich base of Chinese primary sources, including decades worth of party documents, leaked materials, memoirs by party leaders, and a careful analysis of China's conduct to provide a history of China's grand strategy since the end of the Cold War. Taking readers behind the Party's closed doors, he uncovers Beijing's long, methodical game to displace America from its hegemonic position in both the East Asia regional and global orders through three sequential "strategies of displacement." Beginning in the 1980s, China focused for two decades on "hiding capabilities and biding time." After the 2008 Global Financial Crisis, it became more assertive regionally, following a policy of "actively accomplishing something." Finally, in the aftermath populist elections of 2016, China shifted to an even more

aggressive strategy for undermining US hegemony, adopting the phrase "great changes unseen in century." After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response. Ironically, his proposed approach takes a page from Beijing's own strategic playbook to undermine China's ambitions and strengthen American order without competing dollar-for-dollar, ship-for-ship, or loan-for-loan.

The New Total War of the 21st Century and the Trigger of the Fear Pandemic, by Gregory R. Copley, AM (Melbourne, 2020: Sid Harta Publishers) is a work of philosophy and analysis on the transformed nature of human society and the way it goes about the business of survival in the 21st Century. Copley, an Australian, but working with governments around the world, notes in this, his 36th book, that "war is complex, and became exponentially more complex as the 21st Century grew". He says that a simmering conflict became a "total war" of a new type, erupting in 2020, openly and irrevocably from a Beijing epicenter. The opening volleys of this war came to most of the world as a barrage of fear "heard 'round the world". It was the most effective opening salvo of any offensive, 1941's Pearl Harbor included. Fear was the initial weapon and doctrine of the new total war; and coronavirus was the gunpowder which fueled it. Fear can change everything: economics, politics, love and hate, and the balance of power. Life itself. The world had begun moving toward this amorphous new, global "total war" even as the Cold War ended three decades earlier. A basic premise of this book is that the "new total war of the 21st Century" began when the "last total war of the 20th Century" - the Cold War - ended. The Cold War, although total, was predominantly in the social, economic, and technological space, and had only moments of formal or informal armed conflict. The Cold War resulted in the defeat of the USSR and the Warsaw Treaty bloc, partly because the West was able to split the People's Republic of China from the USSR. The PRC, undefeated, did not then become an ally of the West, but rather a key victor of the Cold War. The PRC knows that to succeed in the new total war, it must continue to ensure that grand strategic maneuver dominates, and military contact is minimized and only used to nudge trends or deliver decisive culmination. In all this, military prestige must remain high. US Pres. Donald Trump, like Xi, intrinsically understood that the actual use of military force in total war holds the greatest risk of strategic decline, rather than success. Comprehensive, total maneuver is the game. The book analyzes how the PRC became locked, more than a decade before the 2020 "trigger" of the fear pandemic (which was itself a pivotal point which the COVID-19 crisis brought to a head), into an existential struggle for strategic existence. China's real economy, disguised by formal statistics, had already begun to decline. The world's population had also begun its transformation from population growth to population decline. Everything had changed. In order for the PRC to survive, let alone attain its goal of global dominance, it needed to ensure that its rivals, particularly the US and its allies, faced economic and therefore strategic decline. Beijing needed to level the playing field. PRC Pres. Xi Jinping, in September 2018, set the Communist Party of China's goal as the achievement of "global hegemony" by 2049, the centenary of the Party's achievement of control over mainland China. To do this, he told his senior Party and military leaders, the PRC had begun "a New Thirty Years War" against the US, an historical illusion to Europe's Thirty Years War which ended in 1648 with the Peace of Westphalia. And just as the Peace of Westphalia created a new "rules-based world order" - the foundation of the global geo-strategic framework for the next four centuries - so the "new Peace of Westphalia" determined by a Communist Party of China victory would determine the "new rules-based world order". But even then, as he declared this, Xi knew that the PRC economy was in decline, and that mainland China suffered from critical challenges which had to be overcome.
