E-commerce offers immense challenges to traditional dispute resolution methods, as it entails parties often located in different parts of the world making contracts with each other at the click of a mouse. The use of traditional litigation for disputes arising in this forum is often inconvenient, impractical, time-consuming and expensive due to the low value of the transactions and the physical distance between the parties. Thus modern legal systems face a crucial choice: either to adopt traditional dispute resolution methods that have served the legal systems well for hundreds of years or to find new methods which are better suited to a world not anchored in territorial borders. Online Dispute Resolution (ODR), originally an off-shoot of Alternative Dispute Resolution (ADR), takes advantage of the speed and convenience of the Internet, becoming the best, and often the only option for enhancing consumer redress and strengthening their trust in e-commerce. This book provides an in-depth account of the potential of ODR for European consumers, offering a comprehensive and up to date analysis of the development of ODR. It considers the current expansion of ODR and evaluates the challenges posed in its growth. The book proposes the creation of legal standards to close the gap between the potential of ODR services and their actual use, arguing that ODR, if it is to realise its full potential in the resolution of e-commerce disputes and in the enforcement of consumer rights, must be grounded firmly on a European regulatory model.

E-Commerce Law in Europe and the USA Springer
 This book provides an overview of recent and future legal developments concerning the digital era, to examine the extent to which law has or will further evolve in order to adapt to its new digitalized context. More specifically it focuses on some of the most important legal issues found in areas directly connected with the Internet, such as intellectual property, data protection, consumer law, criminal law and cybercrime, media law and, lastly, the enforcement and application of law. By adopting this horizontal approach, it highlights - on the basis of analysis and commentary of recent and future EU legislation as well as of the latest CJEU and ECtHR case law - the numerous challenges faced by law in this new digital era. This book is of great interest to academics, students, researchers, practitioners and policymakers

specializing in Internet law, data protection, intellectual property, consumer law, media law and cybercrime as well as to judges dealing with the application and enforcement of Internet law in practice.

 With the ongoing evolution of the digital society challenging the boundaries of the law, new questions are arising - and new answers being given - even now, almost three decades on from the digital revolution. Written by a panel of legal specialists and edited by experts on EU Internet law, this book provides an overview of the most recent developments affecting the European Internet legal framework, specifically focusing on four current debates. Firstly, it discusses the changes in online copyright law, especially after the enactment of the new directive on the single digital market. Secondly, it analyzes the increasing significance of artificial intelligence in our daily life. The book then addresses emerging issues in EU digital law, exploring out of the box approaches in Internet law. It also presents the last cyber-criminality law trends (offenses, international instrument, behaviors), and discusses the evolution of personal data protection. Lastly, it evaluates the degree of consumer and corporate protection in the digital environment, demonstrating that now, more than ever, EU Internet law is based on a combination of copyright, civil, administrative, criminal, commercial and banking laws.

 With the massive explosion of e-commerce, and especially the use of the Internet as a transnational and instant medium for business transactions, has come a whole range of new laws and regulations - and, inevitably, a minefield of accompanying uncertainties and potential pitfalls. So what exactly are the legal issues companies need to address, and what are their implications in real terms for the business world? Find the answers in this groundbreaking study undertaken for the European Commission within the framework of the ECLIP project. With a brief to provide practical help for businesses and e-commerce initiatives, this series of cutting-edge reviews examines and evaluates the special rules designed to regulate the Internet - both at a European and at national level in the Member States. It also explains the relevant technological developments and evaluates them against the legal background. This is an essential guide for legal and corporate practitioners alike, as well as software developers and the consultancy community internationally. A publication of the ECLIP network

 In step with its rapid progress to the centre of modern social, political, and economic life, the internet has proven a convenient vehicle for the commission of unprecedented levels of copyright infringement. Given the virtually insurmountable obstacles to

successful pursuit of actual perpetrators, it has become common for intermediaries - providers of internet-related infrastructure and services - to face liability as accessories. Despite advances in policy at the European level, the law in this area remains far from consistently applicable. This is the first book to locate and clarify the substantive rules of European intermediary accessory liability in copyright and to formulate harmonised European norms to govern this complicated topic. With a detailed comparative analysis of relevant regimes in three major Member State jurisdictions - England, France, and Germany - the author elucidates the relationship between these rules and the demands of EU law on fundamental rights and the principles of European tort law. She clearly presents the interrelations between such areas as the following: - accessory liability in tort; - joint tortfeasance; - European fault-based liability: fault, causation, defences; - negligence; - negligence balancing: rights-based or utility-based?; - Germany's "disturbance liability" (Störerhaftung); - fair balance in human rights; - end-users' fundamental rights; - The European Commission's 2015 Communication on a Digital Single Market Strategy for Europe; - The E-Commerce Directive and other relevant provisions; - Safe harbours: mere conduit, caching, hosting; - Intermediary actions: monitoring, filtering, blocking, removal of infringing content; and - application of remedies: damages and injunctions. The strong points of each national system are highlighted, as are the commonalities between them, and the author uses these to build a proposed harmonised European framework for intermediary liability for copyright infringement. She concludes with suggestions for the future possible integration of the proposed framework into EU law. The issue of the liability of internet intermediaries for third party copyright infringement has entered into the political agenda across the globe, giving rise to one of the most complex, contentious, and fascinating debates in modern copyright law. This book offers an opportunity for a re-conceptualisation and rationalisation of the applicable law, in a way which additionally better accounts for the cross-border nature of the internet. It will be of inestimable value to many interested parties - lawyers, internet intermediaries, NGOs, policymakers, universities, libraries, researchers, lobbyists - in matters regarding the information society.

Customs Law of the European Union Elsevier
 Retail is 'going digital,' and grocery shopping is no exception. While some businesses are relying on their corporate website to make the sale, both traditional brick-and-mortar and new disruptive business models are increasingly using online marketplaces to offer their products online. European Union law has been gradually updated to reflect this new reality, with Intellectual Property Rights legislation and Consumer Law leading the way toward a suitable regulatory framework in the Platform

Economy. However, the EU has not devised a comprehensive strategy for tackling the challenges posed by the online sale of physical consumer goods, such as effective public enforcement in online environments. In fact, sector-specific legislation, including Food Law, largely ignores online transactions. In this context, the book evaluates the impact that online marketplaces are having on European Union sector-specific legislation and its enforcement. The goal is to assess whether the existing regulatory and policy framework are sufficient for promoting compliance and bridging the enforcement gap in the digital single market. Focusing on the e-food market, the book presents a state-of-the-art overview of how online marketplaces are altering EU law and its enforcement by public authorities.

EU data protection law is of great practical relevance for any company doing business in today's global information economy. This book provides a detailed and practical exposition of European data protection law in the context of the issues that arise in electronic commerce and dataprocessing. It analyses the relevant EU legislation and case-law, and makes particular reference to the EU Data Protection Directives as well as to the national regulatory systems in Europe and the US. Numerous examples are taken from practice, and advice is given on how the relevant data protection laws apply to and impact upon business in Europe, the US, and worldwide. Beginning with a detailed description of the legislative process, the book goes on to discuss the basic legal concepts underlying data protection law. It then focuses on how to determine whether EU law applies to particular electronic commerce and online activities, and how to transfer personal data outside Europe so as to comply with EU law. The book also includes a comprehensive analysis of how to deal with complex compliance challenges, including notification of databases, processing of employee data, privacy policies, and website compliance and standardization. The key legislative texts needed to deal with complex data protection issues are included in the appendices, along with forms and precedents, contact information for data protection authorities, and links to useful websites. The book is fully up-to-date with the amendments to the Telecommunications Data Protection Directive passed in the summer of 2002.

Electronic Contracting in Europe Bloomsbury Publishing

All are agreed that the digital economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines, social networks, and e-commerce platforms – commonly referred to as the 'gatekeepers' of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a 'refusal to deal' and lead to competition law liability under the so-called 'essential facilities doctrine', according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals. Building on the refusal to deal concept, and using a multidisciplinary approach, the analysis covers such issues and topics as the following: – data portability; – interoperability; – data as a competitive advantage or entry barrier in digital markets; – market definition and dominance with respect to data; – disruptive versus sustaining innovation; – role of intellectual property regimes; – economic trade-off in essential facilities cases; – relationship of competition enforcement with data

protection law and – data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject. *Regulation, Financial Integration and Electronic Commerce* Stanford Law & Politics

The book provides a detailed overview and analysis of important EU Internet regulatory challenges currently found in various key fields of law directly linked to the Internet such as information technology, consumer protection, personal data, e-commerce and copyright law. In addition, it aims to shed light on the content and importance of various pending legislative proposals in these fields, and of the Court of Justice of the European Union's recent case law in connection with solving the different problems encountered. The book focuses on challenging legal questions that have not been sufficiently analyzed, while also presenting original thinking in connection with the regulation of emerging legal questions. As such, it offers an excellent reference tool for researchers, policymakers, judges, practitioners and law students with a special interest in EU Internet law and regulation.

Since the second edition (2010) of this invaluable book – primary texts with expert article-by-article commentary on European data protection, e-commerce and information technology (IT) regulation, including analysis of case law – there has been a marked shift in regulatory focus. It can be said that, without knowing it, EU citizens have migrated from an information society to a digital single market to a data-driven economy. This thoroughly revised and updated third edition pinpoints, in a crystal-clear format, the meaning and application of currently relevant provisions enacted at the European and Member State levels, allowing practitioners and other interested parties to grasp the exact status of such laws, whether in force, under construction, controversial or proposed. Material has been rearranged and brought into line with the vibrant and constantly shifting elements in this field, with detailed attention to developments (most new to this edition) in such issues as the following: · cybersecurity; · privacy rights; · supply of digital content; · consumer rights in electronic commerce; · Geo-blocking; · open Internet; · contractual rules for online sale of (tangible) goods; · competition law in the IT sectors; · consumer online dispute resolution; · electronic signatures; and · reuse of public sector information. There is a completely new section on electronic identification, trust and security regulation, defining the trend towards an effective e-commerce framework protecting consumers and businesses accessing content or buying goods and services online. The contributors offer a very useful and practical review and analysis of the instruments, taking into account the fluidity and the transiency of the regulation of these very dynamic phenomena. This book will be quickly taken up by the myriad professionals – lawyers, officials and academics – engaged with data protection, e-commerce and IT on a daily basis.

The historic European Union Directive on Data Protection will take effect in October 1998. A key provision will prohibit transfer of personal information from Europe to other countries if they lack "adequate" protection of privacy. If enforced as written, the Directive could create enormous obstacles to commerce between Europe and other countries, such as the United States, that do not have comprehensive privacy statutes. In this book, Peter Swire and Robert Litan provide the first detailed analysis of the sector-by-sector effects of the Directive. They examine such topics as the text of the Directive, the tension between privacy laws and modern information technologies, issues affecting a wide range of businesses and other organizations, effects on the financial services sector, and effects on other prominent sectors with large transborder data flows. In light of the many and significant effects of the Directive as written, the book concludes with detailed policy recommendations on how to avoid a coming trade war with

Europe. The book will be of interest to the wide range of individuals and organizations affected by the important new European privacy laws. More generally, the privacy clash discussed in the book will prove a major precedent for how electronic commerce and world data flows will be governed in the Internet Age.

ICT Law and Internationalisation: A Survey of Government Views Edward Elgar Publishing

Electronic commerce is here to stay. No matter how big the dot-com crisis was or how far the e-entrepreneurs' shares fell in the market, the fact remains that there is still confidence in electronic trading. At least it would appear that investors are confident in e-companies again. However, not only trust of venture capitalists is of importance -- consumers also have to have faith in on-line business. After all, without consumers there is no e-business. Interacting lawyers, technicians and economists are needed to create a trustworthy electronic commerce environment. To achieve this environment, thorough and inter-disciplinary research is required and that is exactly what this book is about. Researchers of the project *Enabling Electronic Commerce* from the Dutch universities of Tilburg and Eindhoven have chosen a number of e-topics to elaborate on trust from their point of view. This volume makes clear that the various disciplines can and will play a role in developing conditions for trust and thus contribute to a successful electronic market.

The exponential growth of e-commerce has intensified the requirement for secure electronic verification systems. This ground-breaking study, undertaken for the European Commission by the Interdisciplinary Centre for Law and Information Technology of the Katholieke Universiteit Leuven, provides a country-by-country review of the technology and deployment of electronic signatures. Legal and regulatory issues are examined in the context of the legal framework relating to their use in Europe and beyond. No-one involved in e-commerce, company and contract law, or the provision of information technology systems can afford to ignore its findings.

Is Europe on the Right Track to Becoming Ready for E-Commerce? How Effective is Recent Regulation? EU Regulation of E-Commerce A Commentary

The year 2000 was when the European Union issued its E-commerce Directive. This directive regulates and facilitates e-commerce in the internal market by laying down a clear and general legal framework favorable for business organizations as well as protecting the interests of consumers. This book analyzes the consequences of the legal framework for business organizations involved with e-commerce in Europe.

Featuring foreword from Maciej Szpunar, First Advocate General at the Court of Justice of the European Union and Professor at the University of Silesia in Katowice This book delivers a comprehensive examination of the legal systems that regulate the responsibilities of intermediaries for illegal online content in both the EU and the US. It assesses whether existing systems are capable of tackling modern challenges, ultimately advocating for the introduction of a double-sided duty of care, requiring online intermediaries to do more to tackle illegal content whilst also better protecting their users' rights.

E-commerce and EU VAT: Theory and Practice Rosamund Barr, Jeroen Bijl, Nils Bleckman, Gijsbert Bulk, Ethan Ding & Matthias Luther The new EU rules governing online sales of goods and services affect all businesses that sell online to EU customers, no matter where the seller is based. This timely book, written by leading tax professionals from various EU countries, is the first to clearly explain the VAT compliance obligations and options that businesses and tax practitioners worldwide must understand in order to adapt to the new system. In addition to describing the legal framework, the authors provide examples of how the rules work in practice and illustrate available choices for businesses, with particular attention to avoiding pitfalls. Thoroughly describing the rules affecting place of supply, liability, and accounting procedures in all relevant contexts, the book covers such areas of VAT compliance as the following: • distinction between goods and services; • differences between imported goods and goods sold intra-EU; • filing and invoicing obligations under the new one-stop shop scheme; • reclaiming foreign VAT; • mitigating fears of fraud and hijacking; • distinction between business-to-customer and business-to-business transactions; and • navigating through appeals, mistakes, and adjustments. Also covered are the particular VAT variations applicable to transactions involving the major European non-EU states – Norway, Switzerland, and the United Kingdom. The important

distinction between the concept of 'nexus' in the United States state and local tax rules and 'place of supply' under EU law is also fully explored. Because a very large number of remote sellers of goods and services will need to understand and comply with the changes in the EU VAT e-commerce rules, it goes without saying that this book is indispensable to in-house corporate counsel worldwide. Tax administration officials, professionals in indirect tax management, corporate tax and finance directors and other tax professionals, and academics concerned with indirect tax law

are sure to welcome this essential resource.

Producers and Consumers in EU E-Commerce Law argues that the European Union is failing adequately to protect consumers' critical interests in the area of e-commerce. The book compares the Union's close protection of producers' critical interests in e-commerce, considered in terms of authorship and of 'domain-

identity', with its faltering steps towards protection of consumers' corresponding interests, considered in terms of fair trading, privacy and (on behalf of children) morality. The book assesses the threats posed to those interests, the extent to which self-help can and does neutralise those threats and, as regards any gaps left, the extent to which the Union has stepped into the breach. The argument is important given that surveys show low levels of consumer confidence in European cross-border e-commerce, a motor of integration par excellence.
