Calculus plays an integral role in many fields such as Science, Engineering, Navigation, and so on. Generally, calculus is used to develop a Mathematical model to get an optimal solution.

As far as I know, vector calculus is applied by financial analysts in exotic derivatives pricing. The Black-Scholes Model is actually a special form of Schrödinger equation. Thus, if you want to establish high precision models to price exotic derivatives, you will have the chance to apply vector calculus.

Similarly, if we have any body forces, such as gravity, we have to include them. It's traditional to use f as the body force per unit mass, so that $\mathbf{t} = \mathbf{V}$

Application of vector calculus in mechanical engineering

Vector calculus plays an important role in differential geometry and in the study of partial

differential equations. It is used extensively in physics and engineering, especially in the description of electromagnetic fields, gravitational fields, and fluid flow.

17. Vector Calculus with Applications

Vector calculus is the fundamental language of mathematical physics. It provides a way to describe physical quantities in three-dimensional space and the way in which these quantities vary. Many topics in the physical sciences can be analysed mathematically using the techniques of vector calculus.

This chapter provides a brief introduction to some of the many applications of vector calculus to physics. Each of these is a vast topic in itself and is the subject of numerous books and a great deal of current research, so it is not possible to go into any detail in this book. However, a number of important governing equations and results can be obtained using the methods described in the previous chapters.

In vector (or multivariable) calculus, we will deal with functions of two or three variables (usually x, y or x, y, z , respectively). The graph of a function of two variables, say, $z = f(x, y)$, lies in Euclidean space, which in the Cartesian coordinate system consists of all ordered triples of real numbers (a, b, c) .
