To calculate the mean, we just add up all 7 values, and divide by 7. In fancy statistical notation, $\sum_{i=1}^7 x_i = 10.2 + 12.0 + 9.5 + 13.5 + 7.2 + 10.5 + 6.3 + 12.5 = 77.2$ years. b. To calculate the sample median, first rank the values from lowest to highest: 6.3 7.2 9.5 10.5 12.0 12.5 13.5 SOLUTIONS TO BIOSTATISTICS PRACTICE PROBLEMS mean 90 mg/dL and standard deviation 38 mg/dL. a. Suppose the "abnormal range" were defined to be glucose levels outside of 1 standard deviation of the mean (i.e., either at least 1 standard deviation above the mean, or at least 1 standard deviation below mean). Individuals with abnormal levels will be retested. PRACTICE PROBLEMS FOR BIOSTATISTICS Mean, median, and mode. Example: The median of 4, 1, and 7 is 4 because when the numbers are put in order (1, 4, 7), the number 4 is in the middle. Mode: The most frequent number—that is, the number that occurs the highest number of times. Example: The mode of {4, 2, 4, 3, 2, 2} is 2 because it occurs three times, ... Mean, median, and mode review (article) | Khan Academy Remember, the mean is the arithmetic average of a data set. You can find the mean by adding the numbers in a data set and dividing by how many numbers there are. The median is the middle number in a data set when the numbers are listed in either ascending or descending order, and the mode is the value that occurs the most often in a data set. Sample Problems on Mean, Median and Mode - Shodor In statistics, the mode in a list of numbers refers to the integers that occur most frequently. Unlike the median and mean, the mode is about the frequency of occurrence. There can be more than one mode or no mode at all; it all depends on the data set itself. For example, let's say you have the following list of numbers: Calculating the Mean, Median, and Mode Mean, median, and mode are three kinds of "averages". There are many "averages" in statistics, but these are, I think, the three most common, and are certainly the three you are most likely to encounter in your pre-statistics courses, if the topic comes up at all.

Remember, the mean is the arithmetic average of a data set. You can find the mean by adding the numbers in a data set and dividing by how many numbers there are. The median is the middle number in a data set when the numbers are listed in either ascending or descending order, and the mode is the value that occurs the most often in a data set.
