Widely praised, ARGUMENTATION AND DEBATE, 13E, uses a clear, concise, and engaging presentation that makes even complex material easy for students to understand. The authors have adapted the text over the years to match changing practices in debate and teaching while preserving classical and conventional approaches to learning debate. This edition retains its rhetorical roots with a flexible tone open to a diverse array of debate styles that is appropriate in the contemporary context. It values the importance of inclusion and sensitivity to differences of culture, gender, orientation, class and other factors as they impact communicative choices and argumentation. The authors have a preference for team topic evidence-based policy debate; however, the text strives to offer viable tools for a wide range of readers interested in improving their critical thinking for reasoned decision making. The book inquires into critical thinking through a cultural approach. Based on an ethnographic study, it compares Chinese postgraduate students' conceptualisations and applications of critical thinking in three different settings in China and the UK. From an insider's perspective, it analyses the intricate interplay of multiple cultural and individual factors that conditions students' critical thinking development as they learn to write an academic thesis and to manage postgraduate learning. The book offers insights into the nature of problems that Chinese students encounter with critical thinking and envisions possibilities for the ideas for critical thinking to have a transformative power in an intercultural space. The book will primarily be of interest to academics and educators who work on critical thinking and academic writing, especially those who work with Chinese students. This book covers arguments, belief and doubt, faulty reasoning, deductive and inductive reasoning, and inference; it also offers an introduction to the issues specific to both scientific and moral reasoning. The authors' presentation emphasizes the application of critical thinking skills in disciplines outside of philosophy. The colloquial and friendly tone makes a potentially difficult subject accessible to students. The addition of Canadian material has only enhanced this accessibility by providing students with examples and illustrations that will be familiar to them. Package

We are no longer used to critically examining the meaning of "design", which maintains an unexplored dimension in terms of the Power that can be exercised through the cyclic act of creation, preservation and disruption. This

assumption induce us focus on the contrast between the "visible" side of the act that involves all its conceptual and practical manifestations, and a hidden or "dark" side that deals with politics and power play, but that however has a major influence in the process and its hierarchical dynamics. This implies an order on the surface seems to be naturally stirred by the so-called "perceptions" that reflect the preferences of overall public opinions: however, looking deeper, all the production acts involves a carefully controlled disequilibrium influenced by social, ecological, economical and political interests. The power flow in the act of "design" takes into consideration the paradoxical contradiction between its potentiality and its preservation of power. *Critical Thinking* Routledge
