A look at engineering

education today? with an  
eye to tomorrow

Engineering education is

in flux. While it is

increasingly important

that engineers be

innovative,

entrepreneurial,

collaborative, and able to

work globally, there are

virtually no programs that

prepare students to meet

these new challenges.

Shaping Our World:

Engineering Education for

the 21st Century seeks to

fill this void, exploring

revolutionary approaches

to the current engineering

curriculum that will bring

it fully up to date and

prepare the next

generation of would-be

engineers for real and

lasting professional

success. Comprised of

fourteen chapters written

by respected experts on

engineering education,

the book is divided into

three parts that address

the need for change in the way engineering is taught; specific innovations that have been tested, why they matter, and how they can be more broadly instituted; and the implications for further changes. Designed to aid engineering departments in their transition towards new modes of learning and leadership in engineering education, the book describes how to put into practice educational programs that are aligned with upcoming changes, such as those proposed in the NAE's Engineer of 2020 reports. Addressing the need to change engineering education to meet the demands of the 21st century head on, *Shaping Our World* condenses current discussions, research, and trials regarding new methods into specific, actionable calls for change.
