**FieldWorking** OUP  
Oxford  
Play is one of humanity's  
straightforward yet  
deceitful ideas: though  
the notion is unanimously  
agreed upon to be  
universal, used for man

and animal alike, nothing  
defines what all its  
manifestations share,  
from childish playtime to  
on stage drama, from  
sporting events to market  
speculation. Within the  
author's anthropological  
field of work (Mongolia  
and Siberia), playing holds  
a core position: national  
holidays are called  
"Games," echoing in that  
way the circus games in

Ancient Rome and today's  
Olympics. These games  
convey ethical values and  
local identity. Roberte  
Hamayon bases her  
analysis of the playing  
spectrum on their  
scrutiny. Starting from  
fighting and dancing,  
encompassing learning,  
interaction, emotion and  
strategy, this study heads  
towards luck and belief as  
well as the ambiguity of

the relation to fiction and reality. It closes by indicating two features of play: its margin and its metaphorical structure. Ultimately revealing its consistency and coherence, the author displays play as a modality of action of its own. "Playing is no 'doing' in the ordinary sense" once wrote Johan Huizinga. Isn't playing doing something else, elsewhere and otherwise ? *Purity and Danger* John Murray  
 "A brilliant, witty, and altogether satisfying

book." — New York Times Book Review The classic work on the development of human language by the world's leading expert on language and the mind In *The Language Instinct*, the world's expert on language and mind lucidly explains everything you always wanted to know about language: how it works, how children learn it, how it changes, how the brain computes it, and how it evolved. With deft use of examples of humor and wordplay, Steven Pinker weaves our vast knowledge of language

into a compelling story: language is a human instinct, wired into our brains by evolution. *The Language Instinct* received the William James Book Prize from the American Psychological Association and the Public Interest Award from the Linguistics Society of America. This edition includes an update on advances in the science of language since *The Language Instinct* was first published. [Steps to an Ecology of Mind](#) Createspace Independent Publishing

### Platform

This book emphasizes the major concepts of both anthropology and the anthropology of religion and examines religious expression from a cross-cultural perspective while incorporating key theoretical concepts. It is aimed at students encountering anthropology for the first time.

### The Anthropology of the State Routledge

Hallucinations, for most people, imply madness. But there are many different types of non-

psychotic hallucination caused by various illnesses or injuries, by intoxication--even, for many people, by falling sleep. From the elementary geometrical shapes that we see when we rub our eyes to the complex swirls and blind spots and zigzags of a visual migraine, hallucination takes many forms. At a higher level, hallucinations associated with the altered states of consciousness that may come with sensory deprivation or certain brain disorders can lead

to religious epiphanies or conversions. Drawing on a wealth of clinical examples from his own patients as well as historical and literary descriptions, Oliver Sacks investigates the fundamental differences and similarities of these many sorts of hallucinations, what they say about the organization and structure of our brains, how they have influenced every culture's folklore and art, and why the potential for hallucination is present in us all.

*Is Mars Habitable? A Critical Examination of Professor Percival Lowell's Book "Mars and its Canals," with an Alternative Explanation*  
HAU

In *Placing Outer Space* Lisa Messeri traces how the place-making practices of planetary scientists transform the void of space into a cosmos filled with worlds that can be known and explored. Making planets into places is central to the daily practices and professional identities of the astronomers,

geologists, and computer scientists Messeri studies. She takes readers to the Mars Desert Research Station and a NASA research center to discuss ways scientists experience and map Mars. At a Chilean observatory and in MIT's labs she describes how they discover exoplanets and envision what it would be like to inhabit them. Today's planetary science reveals the universe as densely inhabited by evocative worlds, which in turn tells us more about Earth, ourselves, and our

place in the universe. The River of Consciousness An Anthropologist on Mars An Anthropologist on MarsVintage *Musicophilia* Vintage The first comprehensive guide to anthropological studies of complex organizations Offers the first comprehensive reference to the anthropological study of complex organizations Details how organizational theory and research in business has adopted anthropology's key concept of culture,

inspiring new insights into organizational dynamics and development  
Highlights pioneering theoretical perspectives ranging from symbolic and semiotic approaches to neuroscientific frameworks for studying contemporary organizations  
Addresses the comparative and cross-cultural dimensions of multinational corporations and of non-governmental organizations working in the globalizing economy  
Topics covered include organizational dynamics,

entrepreneurship, innovation, social networks, cognitive models and team building, organizational dysfunctions, global networked organizations, NGOs, unions, virtual communities, corporate culture and social responsibility  
Presents a body of work that reflects the breadth and depth of the field of organizational anthropology and makes the case for the importance of the field in the anthropology of the twenty-first century  
*On the Move* Springer

Nature

More than 50 years after the Mariner 4 flyby on 15 July 1965, Mars still represents the next frontier of space explorations. Of particular focus nowadays is crewed missions to the red planet. Over three sections, this book explores missions to Mars, in situ operations, and human-rated missions. Chapters address elements of design and possible psychological effects related to human-rated missions. The information contained

herein will allow for the development of safe and efficient exploration missions to Mars.

Between Two Worlds

Vintage

Purity and Danger is acknowledged as a modern masterpiece of anthropology. It is widely cited in non-anthropological works and gave rise to a body of application, rebuttal and development within anthropology. In 1995 the book was included among the Times Literary Supplement's hundred most influential non-

fiction works since WWII. Incorporating the philosophy of religion and science and a generally holistic approach to classification, Douglas demonstrates the relevance of anthropological enquiries to an audience outside her immediate academic circle. She offers an approach to understanding rules of purity by examining what is considered unclean in various cultures. She sheds light on the symbolism of what is considered clean and dirty

in relation to order in secular and religious, modern and primitive life.

**Anthropology: The**

**Basics** Vintage Canada

Approaching the

settlement of our Moon from a practical perspective, this book is well suited for space program planners. It addresses a variety of human factor topics involved in colonizing Earth's Moon, including: history, philosophy, science, engineering, agriculture, medicine, politics & policy, sociology, and

anthropology. Each chapter identifies the complex, interdisciplinary issues of the human factor that arise in the early phases of settlement on the Moon. Besides practical issues, there is some emphasis placed on preserving, protecting, and experiencing the lunar environment across a broad range of occupations, from scientists to soldiers and engineers to construction workers. The book identifies utilitarian and visionary factors that

shape human lives on the Moon. It offers recommendations for program planners in the government and commercial sectors and serves as a helpful resource for academic researchers. Together, the coauthors ask and attempt to answer: “How will lunar society be different?”  
Mars Life Simon and Schuster  
NATIONAL BESTSELLER • A “wonderful memoir” (Los Angeles Times) about a brilliantly unconventional physician

and writer, a man who has illuminated the many ways that the brain makes us human. • “Intimate.... Brim[s] with life and affection.” —The New York Times When Oliver Sacks was twelve years old, a perceptive schoolmaster wrote: “Sacks will go far, if he does not go too far.” It is now abundantly clear that Sacks has never stopped going. With unbridled honesty and humor, Sacks writes about the passions that have driven his life—from motorcycles and weight lifting to

neurology and poetry. He writes about his love affairs, both romantic and intellectual; his guilt over leaving his family to come to America; his bond with his schizophrenic brother; and the writers and scientists—W. H. Auden, Gerald M. Edelman, Francis Crick—who have influenced his work.

*Uncle Tungsten* University of Illinois Press

In a new approach to philosophical anthropology, Bruno Latour offers answers to questions raised in *We Have Never Been Modern*:

If not modern, what have we been, and what values should we inherit? *An Inquiry into Modes of Existence* offers a new basis for diplomatic encounters with other societies at a time of ecological crisis.

**Awakenings** Duke University Press

The classic account of survivors of the sleeping-sickness during the great epidemic just after World War I—and their return to the world after decades of “sleep.” • “One of the most beautifully composed and moving

works of our time” (The Washington Post) from the distinguished neurologist and the national bestselling author of *The Man Who Mistook His Wife for a Hat*. *Awakenings*—which inspired the major motion picture starring Robert DeNiro and Robin Williams—is the remarkable story of a group of patients who contracted sleeping-sickness during the great epidemic just after World War I. Frozen for decades in a trance-like state, these men and women

were given up as hopeless until 1969, when Dr. Oliver Sacks gave them the then-new drug L-DOPA, which had an astonishing, explosive, "awakening" effect. Dr. Sacks recounts the moving case histories of his patients, their lives, and the extraordinary transformations which went with their reintroduction to a changed world.

Anthropology of the Brain  
Routledge

In this unique exploration of the mysteries of the human brain, Roger

Bartra shows that consciousness is a phenomenon that occurs not only in the mind but also in an external network, a symbolic system. He argues that the symbolic systems created by humans in art, language, in cooking or in dress, are the key to understanding human consciousness. Placing culture at the centre of his analysis, Bartra brings together findings from anthropology and cognitive science and offers an original vision of the continuity between

the brain and its symbolic environment. The book is essential reading for neurologists, cognitive scientists and anthropologists alike.

Hallucinations Harper Collins

Peter Metcalf explains and explores anthropological ideas, key anthropologist thinkers, concepts and themes, and the history of anthropological ideas.

*Introducing Cultural Anthropology* Simon and Schuster

While today's business world is dominated by technology and data

analysis, award-winning financial journalist and anthropology PhD Gillian Tett advocates thinking like an anthropologist to better understand consumer behavior, markets, and organizations to address some of society's most urgent challenges. Amid severe digital disruption, economic upheaval, and political flux, how can we make sense of the world? Leaders today typically look for answers in economic models, Big Data, or artificial intelligence platforms.

Gillian Tett points to anthropology—the study of human culture. Anthropologists learn to get inside the minds of other people, helping them not only to understand other cultures but also to appraise their own environment with fresh perspective as an insider-outsider, gaining lateral vision. Today, anthropologists are more likely to study Amazon warehouses than remote Amazon tribes; they have done research into institutions and companies such as

General Motors, Nestlé, Intel, and more, shedding light on practical questions such as how internet users really define themselves; why corporate projects fail; why bank traders miscalculate losses; how companies sell products like pet food and pensions; why pandemic policies succeed (or not). Anthropology makes the familiar seem unfamiliar and vice versa, giving us badly needed three-dimensional perspective in a world where many executives are plagued by

tunnel vision, especially in fields like finance and technology. "Fascinating and surprising" (Fareed Zararia, CNN), *Anthro-Vision* offers a revolutionary new way for understanding the behavior of organizations, individuals, and markets in today's ever-evolving world.

"Chess gets a hold of

some people, like a virus or a drug," writes Robert Desjarlais in this absorbing book. Drawing on his lifelong fascination with the game, Desjarlais guides readers into the world of twenty-first-century chess to help us understand its unique pleasures and challenges, and to advance a new "anthropology of passion." Immersing us directly in chess's intricate culture, he interweaves small dramas, closely observed details, illuminating insights, colorful anecdotes, and

unforgettable biographical sketches to elucidate the game and to reveal what goes on in the minds of experienced players when they face off over the board. *Counterplay* offers a compelling take on the intrigues of chess and shows how themes of play, beauty, competition, addiction, fanciful cognition, and intersubjective engagement shape the lives of those who take up this most captivating of games.

"A powerful and  
 provocative testament to  
 the diverse coalition of  
 minds we'll need to face  
 the mounting challenges  
 of the twenty-first  
 century." —Steve  
 Silberman "An absolute

eye-opener.” —Frans de Waal A landmark book that reveals, celebrates, and advocates for the special minds and contributions of visual thinkers A quarter of a century after her memoir, *Thinking in Pictures*, forever changed how the world understood autism, Temple Grandin— “an anthropologist on Mars,” as Oliver Sacks dubbed her—transforms our awareness of the different ways our brains are wired. Do you have a keen sense of direction, a love of puzzles, the ability to

assemble furniture without crying? You are likely a visual thinker. With her genius for demystifying science, Grandin draws on cutting-edge research to take us inside visual thinking. Visual thinkers constitute a far greater proportion of the population than previously believed, she reveals, and a more varied one, from the photo-realistic “object visualizers” like Grandin herself, with their intuitive knack for design and problem solving, to the abstract, mathematically

inclined “visual spatial” thinkers who excel in pattern recognition and systemic thinking. She also makes us understand how a world increasingly geared to the verbal tends to sideline visual thinkers, screening them out at school and passing over them in the workplace. Rather than continuing to waste their singular gifts, driving a collective loss in productivity and innovation, Grandin proposes new approaches to educating, parenting, employing, and

collaborating with visual thinkers. In a highly

competitive world, this important book helps us

see, we need every mind on board.
