The twelfth edition of this long-established textbook of clinical pharmacology (first published in 1960) continues its fine tradition of balancing science and practice for improved evidence-based drug therapy and good prescribing in therapeutic settings increasingly complicated by intercurrent disease and polypharmacy. Coverage

of all major therapeutic topics by body system. Introductory sections give brief chapter synopses. Case studies where relevant. Covers the needs of the developing world with a focus on practical prescribing and health technology assessment. Definition, tips, brief explanation boxes throughout. From reviews of the previous edition: 'This new edition of Clinical Pharmacy and Therapeutics was really very helpful when I was doing an MSc course in

Advancing Pharmacy Practice and it was really very helpful in all the clinical diseases I have to read for my PBL. I also used it as one of my most reliable reference books for the in-course simulation ward rounds and other clinical case studies. It is a great book to have as a practising clinical or hospital pharmacist or even community pharmacist. It will also be of great use to anyone doing a course in pharmacotherapy. This book will always be of use to you throughout your studentship or when practising after graduation. It is also more portable than most other pharmacotherapy textbooks with the same amount of information.' Now in its sixth edition, this best-selling, multi-disciplinary textbook continues to draw on the skills of pharmacists, clinicians and nurses to present optimal drug regimens. The authors integrate an understanding of the disease processes with an appreciation of the pathophysiological processes, clinical pharmacy and the evidence base. Each chapter is co-written by a pharmacist and a clinician, and each

chapter begins with key points and ends with cases to test understanding. The sixth edition is now on StudentConsult for the first time, giving online access to the full text. Key points boxes at the beginning of each chapter Case-study boxes throughout the chapters Each chapter co-written by a pharmacist and a clinician In-depth treatment of therapeutics to support pharmaceutical prescribing Logical order and format: key points, epidemiology, aetiology, disease, clinical manifestations, investigations and treatment, drugs used in treatment.
