The Game Maker's Companion Gender Ideologies and Military Labor Markets in the U.S.

"In this profoundly moving memoir, Owita teaches Wall how to find grace amid heartbreak and to accept that beauty exists because it is fleeting—as in her garden, as in life." —People, 4 stars "A perfect spring awakening." —Good Housekeeping A true story of a unique friendship between two people who had nothing—and ultimately everything—in common. Carol Wall, a white woman living in a lily-white neighborhood in Middle America, was at a crossroads in her life. Her children were grown; she had successfully overcome illness; her beloved parents were getting older. One day she notices a dark-skinned African man tending her neighbor's yard. His name is Giles Owita. He bags groceries at the supermarket. He comes from Kenya. And he's very good at gardening. Before long Giles is transforming not only Carol's yard, but her life. Though they are seemingly quite different, a caring bond grows between them. But they both hold long-buried secrets that, when revealed, will cement their friendship forever.

Proteases are everywhere from prokaryotes to eukaryotes, from virus to bacteria and in all human tissues, playing a role in many biological functions. Among these functions, the inflammatory reaction is of particular interest. In inflamed tissues, proteases can have a microbial and/or host origin and are involved not only in tissue remodeling, but also in specific signaling to resident or inflammatory cells, thereby contributing to the innate immune response. This volume presents all advances in our knowledge of the role proteases and their inhibitors play in various diseases associated with inflammatory response. Mechanisms involved in protease signaling to cells are presented, and the different types of proteases that are present at inflammatory sites and their effects on the course of inflammation are discussed. Finally, the evidence for considering proteases and their receptors as potential molecular targets for therapeutic interventions in the treatment of inflammatory diseases is discussed in the context of specific organ inflammatory pathologies (the lung, gastrointestinal tract, skin, joints, etc.).

Kennewick Man, known as the Ancient One to Native Americans, has been the lightning rod for conflict between archaeologists and indigenous peoples in the United States. A decade-long legal case pitted scientists against Native American communities and

highlighted the shortcomings of the Native American Graves and Repatriation Act (NAGPRA), designed to protect Native remains. In this volume, we hear from the many sides of this issue—archaeologists, tribal leaders, and others—as well as views from the international community. The wider implications of the case and its resolution is explored. Comparisons are made to similar cases in other countries and how they have been handled. Appendixes provide the legal decisions, appeals, and chronology to allow full exploration of this landmark legal struggle. An ideal starting point for discussion of this case in anthropology, archaeology, Native American studies, and cultural property law courses. Sponsored by the World Archaeological Congress.
