Are our lives already predetermined from the moment we're born or do we have to find our own destiny? You're invited to read the testimony, observe the evidence, consider the summary, and decide your own verdict. Get ready to embark on the most amazingly true story ever told.

Introduction to Industrial/organizational Psychology Springer Science & Business Media
 Only trust can save her.... Sailing to London, Sophia Braighton only hopes to escape certain ruin. But when she arrives, her Great Aunt Daphne has other plans for the American-born beauty. Determined to marry off her niece to a man of means, she propels Sophia into London society, not knowing that the young woman's trust in men is shattered. In fact, Sophia never expects to ever feel anything for a man. Then again, she never expects to find herself in the company of the dashing earl of Marlton.... From the moment he sees Sophia, Daniel Fallon feels alive in a way he

has not since his broken engagement. Though the vulnerable beauty shies from the passion burning bright between them, Daniel is determined to court her and make her his bride. And when he learns of the painful secret she harbors, he is equally determined to take revenge on the man responsible. But will the quest destroy him-and his future with his beloved?

This monograph by Professor Alexandridis continues the proud tradition of German ophthalmology in its discussion of the pupil and its importance in the diagnosis of ocular, neurologic, and systemic diseases. The first encyclopedic work on the pupil was written by Wilbrand and Saenger at the end of the 19th century. This redoubtable pair of physicians collected, analyzed, and clas sified all the material available at that time, bringing order into the previous chaos. The second major work was the book by C. v. Behr shortly after World War 1. At that time, syphilis had been accurately diagnosed with the aid of serologic tests, and pharmacologic effects on the pupil had become well known. The third significant development was initiated before World War II by the neurologist Otto

Lowenstein, whose work was later brilliantly continued by his pupil and niece Irene Lowenfeld. The introduction of their clinically useful pupillograph made quantitative analysis possible. There followed a number of important contributions to the knowledge of pupillary physiology and pathology, especially by Harms in Tiibingen and Thompson in Iowa City. But the next decisive contribution is this monograph by Alexandridis.

Do cats worry about retirement? Nope. Do cats do things they don't want to do? Definitely not. Do cats rush around at all hours of the day when they'd rather be licking their paws and looking out a window? Please. Calm, free, charismatic, wise, elegant, self-assured—our beloved feline pets strut those traits that we humans spend a lifetime aspiring to. No wonder everybody wants to be more like a cat. After observing his own cat, Ziggy, for years, bestselling French author Stéphane Garnier decided that he would be much happier if he could just live more like Ziggy. Closer study only confirmed his suspicion that cats have that je ne sais quoi, and he set out to share Ziggy's innate wisdom with the world. Whether at work, at home, or in your social life, your cat can teach you how to manage stress, cultivate independence, and live life on your terms. Peppered with humorous yet inspiring tips for living a day in the life of a cat, cat secrets from Ziggy, and a quiz to assess your "cat quotient," How to Think Like a Cat is an inspiring, humorous, and remarkably insightful guide to the subtle art of living like a feline.

In Control in an Age of Empowerment, Robert Simons explains how to give employees the freedom to innovate while protecting your firm from loose cannons. Using powerful examples, Simons shows how to apply four powerful management "levers" to balance autonomy with control:

Traditional diagnostic control systems, Belief systems, Boundary systems, and Interactive control systems. Used in concert, these four levers give you the control you need—without sacrificing the creative thinking your company can't do without. Since 1922, Harvard Business Review has been a leading source of breakthrough ideas in management practice. The Harvard Business Review Classics series now offers you the opportunity to make these seminal pieces a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world.

A PROPOSAL FROM A SCOUNDREL Daphne Swift has not laid eyes on her devilishly charming husband, Captain Rafferty Cavendish, in quite some time. As a matter of fact, she wants the rogue to annul their brief marriage so that she can marry the reliable and estimable Lord Fitzwell. But the breathtakingly handsome Rafe is not interested in letting Daphne go—at least not without paying his scandalous price... THE SEDUCTION OF HIS WIFE Rafe prefers to face the dangers of spying alone, but this time he needs his innocent, fiery wife to uncover the information he seeks. He has even agreed to release her from their marriage if she submits completely to his plan. However, Daphne's alluring combination of courage and curves makes her a dangerous distraction, and it is not long before Rafe is trading subterfuge for seduction in order to prove that Daphne is meant to

Whenever radioactivity is released to the atmosphere, for example by the detonation of nuclear weapons or the testing of nuclear weapons or from nuclear reactor accidents that fraction of it which remains airborne for more than a few hours is liable to be attached to aerosol particles. The resulting radioactive aerosols are carried by atmospheric mixing processes until they settle out or are scavenged by precipitation. The radiation exposure pathway of maximum concern to humans is by inhalation of aerosols and their deposition in the respiratory tract. In this context, it is important to note that radioactive aerosols are commonly of natural origin alos. In particular, the associated radionuclides can be of natural terrestrial origin, such as the decay products of radon gas, or they can be cosmogenic, such as beryllium-7. The exposure of miners of uranium and other ores and minerals to radon and its aerosol-borne decay products is of major significance. The book describes the formation of aerosols, their aerodynamic size distribution, their atmospheric residence time, their sampling and measurement, the range of radioactive aerosols found and studied thus far, including man-made nuclides and radon decay products and their interaction with man, including deposition in the lung and subsequent health effects. Advanced level science handbook for researchers, scientists and academics Covers all aspects of radiation exposure in humans, including subsequent health implications Presents the latest findings and analysis in this highly topical area

Making, amending, and interpreting constitutions is a political game that can yield widespread suffering or secure a nation's liberty and prosperity. Given these high stakes, Robert Cooter argues that constitutional theory should trouble itself less with literary analysis and arguments over founders' intentions and focus much more on the real-world consequences of various constitutional provisions and choices. Pooling the best available theories from economics and political science, particularly those developed from game theory, Cooter's economic analysis of constitutions fundamentally recasts a field of growing interest and dramatic international importance. By uncovering the constitutional incentives that influence citizens, politicians, administrators, and judges, Cooter exposes fault lines in alternative forms of democracy: unitary versus federal states, deep administration versus many elections, parliamentary versus presidential systems, unicameral versus bicameral legislatures, common versus civil law, and liberty versus equality rights. Cooter applies an efficiency test to these alternatives, asking how far they satisfy the preferences of citizens for laws and public goods. To answer Cooter contrasts two types of democracy, which he defines as competitive government. The center of the political spectrum defeats the extremes in

"median democracy," whereas representatives of all the citizens bargain over laws and public goods in "bargain democracy." Bargaining can realize all the gains from political trades, or bargaining can collapse into an unstable contest of redistribution. States plagued by instability and contests over redistribution should move towards median democracy by increasing transaction costs and reducing the power of the extremes. Specifically, promoting median versus bargain democracy involves promoting winner-take-all elections versus proportional representation, two parties versus multiple parties, referenda versus representative democracy, and special governments versus comprehensive governments. This innovative theory will have ramifications felt across national and disciplinary borders, and will be debated by a large audience, including the growing pool of economists interested in how law and politics shape economic policy, political scientists using game theory or specializing in constitutional law, and academic lawyers. The approach will also garner attention from students of political science, law, and economics, as well as policy makers working in and with new democracies where constitutions are being written and refined.

In many areas of mathematics some "higher operations" are arising. These have become so important that several research projects refer to such expressions. Higher operations form new types of algebras. The key to understanding and comparing them, to creating invariants of their action is operad theory. This is a point of view that is 40 years old in algebraic topology, but the new trend is its appearance in several other areas, such as algebraic geometry, mathematical physics, differential geometry, and combinatorics. The present volume is the first comprehensive and systematic approach to algebraic operads. An operad is an algebraic device that serves to study all kinds of algebras (associative, commutative, Lie, Poisson, A-infinity, etc.) from a conceptual point of view. The book presents this topic with an emphasis on Koszul duality theory. After a modern treatment of Koszul duality for associative algebras, the theory is extended to operads. Applications to homotopy algebra are given, for instance the Homotopy Transfer Theorem. Although the necessary notions of algebra are recalled, readers are expected to be familiar with elementary homological algebra. Each chapter ends with a helpful summary and exercises. A full chapter is devoted to examples, and numerous figures are included. After a low-level chapter on Algebra, accessible to (advanced) undergraduate students, the level increases gradually through the book. However, the authors have done their best to make it suitable for graduate students: three appendices review the basic results needed in order to understand the various chapters. Since higher algebra is becoming essential in several research areas like deformation theory, algebraic geometry, representation theory, differential geometry, algebraic combinatorics, and mathematical physics, the book can also be used as a reference work by researchers.
