The Examinations of Anne Askew Hodder Arnold

Warren Buffett built Berkshire Hathaway into something remarkable—and Fortune journalist Carol Loomis had a front-row seat for it all. When Carol Loomis first mentioned a little-known Omaha hedge fund manager in a 1966 Fortune article, she didn't dream that Warren Buffett would one day be considered the world's greatest investor—nor that she and Buffett would quickly become close personal friends. As Buffett's fortune and reputation grew over time, Loomis used her unique insight into Buffett's thinking to chronicle his work for Fortune, writing and proposing scores of stories that tracked his many accomplishments—and also his occasional mistakes. Now Loomis has collected and updated the best Buffett articles Fortune published between 1966 and 2012, including thirteen cover stories and a dozen pieces authored by Buffett himself. Loomis has provided commentary about each major article that supplies context and her own informed point of view. Readers will gain fresh insights into Buffett's investment strategies and his thinking on management, philanthropy, public policy, and even parenting. Some of the highlights include: The 1966 A. W. Jones story in which Fortune first mentioned Buffett. The first piece Buffett wrote for the magazine, 1977's "How Inflation Swindles the Equity Investor." Andrew Tobias's 1983 article "Letters from Chairman Buffett," the first review of his Berkshire Hathaway shareholder letters. Buffett's stunningly prescient 2003 piece about derivatives, "Avoiding a Mega-Catastrophe." His unconventional thoughts on inheritance and philanthropy, including his intention to leave his kids "enough money so they would feel they could do anything, but not so much that they could do nothing." Bill Gates's 1996 article describing his early impressions of Buffett as they struck up their close friendship. Scores of Buffett books have been written, but none can claim this work's combination of trust between two friends, the writer's deep understanding of Buffett's world, and a very long-term perspective.

Second-person storytelling is a continually present and diverse technique in the history of literature that appears only once in the oeuvre of an author. Based on key narratives of the post-war period, Evgenia Iliopoulou approaches the phenomenon in an inductive way, starting out from the essentials of grammar and rhetoric, and aims to improve the general understanding of second-person narrative within literature. In its various forms and typologies, the second person amplifies and expands the limits of representation, thus remaining a narrative enigma: a small narrative gesture - with major narrative impact.

The Sounds of Early Cinema is devoted exclusively to a little-known, yet absolutely crucial phenomenon: the ubiquitous presence of sound in early cinema. "Silent cinema" may rarely have been silent, but the sheer diversity of sound(s) and sound/image relations characterizing the first 20 years of moving picture exhibition can still astonish us. Whether instrumental, vocal, or mechanical, sound ranged from the improvised to the pre-arranged (as in scripts, scores, and cue sheets). The

practice of mixing sounds with images differed widely, depending on the venue (the nickelodeon in Chicago versus the summer Chautauqua in rural Iowa, the music hall in London or Paris versus the newest palace cinema in New York City) as well as on the historical moment (a single venue might change radically, and many times, from 1906 to 1910). Contributors include Richard Abel, Rick Altman, Edouard Arnoldy, Mats Björkin, Stephen Bottomore, Marta Braun, Jean Châteauevert, Ian Christie, Richard Crangle, Helen Day-Mayer, John Fullerton, Jane Gaines, André Gaudreault, Tom Gunning, François Jost, Charlie Keil, Jeff Klenotic, Germain Lacasse, Neil Lerner, Patrick Loughney, David Mayer, Domi-nique Nasta, Bernard Perron, Jacques Polet, Lauren Rabinovitz, Isabelle Raynauld, Herbert Reynolds, Gregory A. Waller, and Rashit M. Yangirov.

With nearly 400 scores to his credit, Ennio Morricone is one of the most prolific and influential film composers working today. He has collaborated with many significant directors, and his scores for such films as *The Good, the Bad, and the Ugly*; *Once Upon a Time in America*; *Days of Heaven*; *The Mission*; *The Untouchables*; *Malèna*; and *Cinema Paradiso* leave moviegoers with the conviction that something special was achieved—a conviction shared by composers, scholars, and fans alike. In *Composing for the Cinema: The Theory and Praxis of Music in Film*, Morricone and musicologist Sergio Miceli present a series of lectures on the composition and analysis of film music. Adapted from several lectures and seminars, these lessons show how sound design can be analyzed and offer a variety of musical solutions to many different kinds of film. Though aimed at composers, Morricone's expositions are easy to understand and fascinating even to those without any musical training. Drawing upon scores by himself and others, the composer also provides insight into his relationships with many of the directors with whom he has collaborated, including Sergio Leone, Giuseppe Tornatore, Franco Zeffirelli, Warren Beatty, Ridley Scott, Roland Joffé, the Taviani Brothers, and others. Translated and edited by Gillian B. Anderson, an orchestral conductor and musicologist, these lessons reveal Morricone's passion about musical expression. Delivered in a conversational mode that is both comprehensible and interesting, this groundbreaking work intertwines analysis with practical details of film music composition. Aimed at a wide audience of composers, musicians, film historians, and fans, *Composing for the Cinema* contains a treasure trove of practical information and observations from a distinguished musicologist and one of the most accomplished composers on the international film scene.

Learn how the extraordinary impact of the panda—from obscurity to fame—is also the story of China's transition from shy beginnings to center stage. Giant pandas have been causing a stir ever since their formal scientific discovery just over 140 years ago. Yet in spite of humankind's evident obsession with the giant panda, it is only in the last few decades that scientific research has begun to show us what this mysterious, frequently misunderstood creature is really like. Henry Nicholls uses the rich and curious history of the giant panda to do several things: to ponder our changing attitudes toward the natural world; to offer a compelling history of the conservation movement; and to chart the rise of modern China on its journey to become the self-sufficient, twenty-first-century

superpower it is today.

Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. The ocean comprises the largest object on our planet. Retelling human history from an oceanic rather than terrestrial point of view unsettles our relationship with the natural environment. Our engagement with the world's oceans can be destructive, as with today's deluge of plastic trash and acidification, but the mismatch between small bodies and vast seas also emphasizes the frailty and resilience of human experience. From ancient stories of shipwrecked sailors to the containerized future of 21st-century commerce, *Ocean* splashes the histories we thought we knew into salty and unfamiliar places. Object Lessons is published in partnership with an essay series in *The Atlantic*.

Written by Harvard-trained ex-law firm partner Liz Brown, *Life After Law: Finding Work You Love with the J.D. You Have* provides specific, realistic, and honest advice on alternative careers for lawyers. Unlike generic career guides, *Life After Law* shows lawyers how to reframe their legal experience to their competitive advantage, no matter how long they have been in or out of practice, to find work they truly love. Brown herself moved from a high-powered partnership into an alternative career and draws from this experience, as well as that of dozens of former practicing attorneys, in the book. She acknowledges that changing careers is hard much harder than it was for most lawyers to get their first legal job after law school but it can ultimately be more fulfilling for many than a life in law. *Life After Law* offers an alternative framework and valuable analytic tools for potential careers to help launch lawyers into new fields and make them attractive hires for non-legal employers.

The papers in this book explore language use in a broad range of discourse fields. They provide theoretical perspectives on global orientations to social, political and economic transformations in the "New World Order" (NWO), and extend these with studies on the impacts of such transformations at the local, national, regional and global levels. The discussions highlight current concerns among academics and political commentators about the potential social impact of representations of the NWO in language and discourse. The present work is important in raising social consciousness towards the central role that language and discourse play in the construction of shifting/multiple identities. In this way, the roles of critical discourse analysis and indeed that of the analysts themselves are emancipative and socially transformative. The value of such consciousness-raising for potential social action in language user empowerment terms cannot be overstressed, particularly given the ascendant position of the English language in the NWO. This collection is a

significant contribution to the ongoing critical discussion on global order discourse.

This document, intended as a resource for calculus reform, contains 75 separate contributions, comprising a very diverse set of opinions about the shape of calculus for a new century. The authors agree on the forces that are reshaping calculus, but disagree on how to respond to these forces. They agree that the current course is not satisfactory, yet disagree about new content emphases. They agree that the neglect of teaching must be repaired, but do not agree on the most promising avenues for improvement. The document contains: (1) a record of presentations prepared for a colloquium; (2) a collage of reactions to the colloquium by a variety of individuals representing diverse calculus constituencies; (3) summaries of 16 discussion groups that elaborate on particular themes of importance to reform efforts; (4) a series of background papers providing context for the calculus colloquium; (5) a selection of final examinations from Calculus I, II, and III from universities, colleges, and two-year colleges around the country; (6) a collection of reprints of documents related to calculus; and (7) a list of colloquium participants. This book examines the place of talk in learning and the role of such talk in literacy education. It builds on a strong tradition of research into the role of talk in constructing curriculum knowledge, the relationship between talking and thinking, and the significance of extended, in-depth dialogic interaction in classroom talk. However, it differs from tradition with its emphasis on the need to make the role of language in learning more visible and more explicit. This book places particular emphasis on the relationship between dialogic pedagogy and language-based approaches to learning. Contributions range from discussions on educational linguistics and dialogic pedagogy as complementary perspectives to needs of students for whom English is an additional language or dialect. This volume was originally published as a special issue of *Research Papers in Education*.

The first step-by-step guide to conducting successful Chi-squared tests Chi-squared testing is one of the most commonly applied statistical techniques. It provides reliable answers for researchers in a widerange of fields, including engineering, manufacturing, finance, agriculture, and medicine. *A Guide to Chi-Squared Testing* brings readers up to date on recent innovations and important material previously published only in the former Soviet Union. Its clear, concise treatment and practical advice make this an ideal reference for all researchers and consultants. Authors Priscilla E. Greenwood and Mikhail S. Nikulin demonstrate the application of these general purpose tests in a wide variety of specific settings. They also * Detail the various decisions to be made when applying Chi-squared tests to real data, and the proper application of these tests in standard hypothesis-testing situations * Describe how Chi-squared type tests allow statisticians to construct a test statistic whose distribution is asymptotically Chi-squared, and to compute power against various alternatives * Devote half of the book to examples of Chi-squared tests that can be easily adapted to situations not covered in the book * Provide a self-contained, accessible treatment of the mathematical requisites * Include an extensive bibliography and suggestions for further reading

A revolutionary approach to unlocking your innate ability to achieve success in business and in life. Why do we constantly feel overwhelmed by stress, dissatisfied in our careers and relationships, and lacking in real purpose? Why do we seem to sabotage ourselves, hampering our productivity and success? The answer lies in our instincts . . . In every area of life, from business to relationships to health, we act on outdated instincts that were built to help us survive a world ruled by scarcity and danger. But in today's world, those same instincts stop us from succeeding in the environment in which we actually live: a diverse world of abundant choices, and almost limitless connections. Now evolutionary biologist Dr. Rebecca Heiss offers a new approach that harnesses the power of our instincts, and redirects them to work for us rather than against us. Dr. Heiss reveals the science behind our self-sabotaging behaviors, then provides simple, actionable techniques that can rebuild our instinctive minds. Both practical and inspiring, *Instinct* is a roadmap that anyone can use to finally stop living on autopilot, improve productivity and happiness, and consciously craft a better life.

This important theoretical work by Paul de Man sets forth a mode of reading and interpretation based on exemplary texts by Rousseau, Nietzsche, Rilke, and Proust. The readings start from unresolved difficulties in the critical traditions engendered by these authors, and they return to the places in the text where those difficulties are most apparent or most incisively reflected upon. The close reading leads to the elaboration of a more general model of textual understanding, in which de Man shows that the thematic aspects of the texts--their assertions of truth or falsehood as well as their assertions of values--are linked to specific modes of figuration that can be identified and described. The description of synchronic figures of substitution leads, by an inner logic embedded in the structure of all tropes, to extended, narrative figures or allegories. De Man poses the question whether such self-generating systems of figuration can account fully for the intricacies of meaning and of signification they produce. Throughout the book, issues in contemporary criticism are addressed analytically rather than polemically. Traditional oppositions are put in question by a rhetorical analysis which demonstrates why literary texts are such powerful sources of meaning yet epistemologically so unreliable. Since the structure which underlies this tension belongs to language in general and is not confined to literary texts, the book, starting out as practical and historical criticism or as the demonstration of a theory of literary reading, leads into larger questions pertaining to the philosophy of language. "Through elaborate and elegant close readings of poems by Rilke, Proust's *Remembrance*, Nietzsche's philosophical writings and the major works of Rousseau, de Man concludes that all writing concerns itself with its own activity as language, and language, he says, is always unreliable, slippery, impossible....Literary narrative, because it must rely on language, tells the story of its own inability to tell a story....De Man demonstrates, beautifully and convincingly, that language turns back on itself, that rhetoric is untrustworthy."--Julia Epstein, *Washington Post Book World* "The study follows out of the thinking of Nietzsche and Genette (among others), yet moves in strikingly new directions....De Man's text, almost certain to be endlessly provocative, is worthy of repeated re-reading."--Ralph Flores, *Library Journal* "Paul de Man continues his work in the tradition of 'deconstructionist criticism, '... which] begins with the observation that all language is constructed; therefore the task of criticism is to deconstruct it and reveal what lies behind. The title of his new work reflects de Man's preoccupation with the unreliability of language. ... The contributions that the book makes, both in the initial theoretical chapters and in the detailed analyses (or deconstructions) of particular texts are undeniable."--Caroline D. Eckhardt, *World Literature Today*
