The acute abdomen is one of the most frequent, most dangerous and most difficult problems that the diagnostic radiologist has to deal with. This comprehensive manual presents a clinico-radiologic approach to the use of diagnostic imaging techniques for acute

abdominal conditions. Imaging techniques, radiologic symptoms and clinical conditions are treated separately. This lucid format, together with a detailed subject index, offer the reader a quick and reliable reference aid in daily practice. The text is clearly structured and concise in style, and provides helpful practical hints, including discussion of diagnostic pitfalls. It is supported by a wealth of illustrations covering native diagnosis, ultrasonography, computer tomography and angiography.

Radiology Springer Science & Business Media

Originally published in 1983, this volume represents the edited proceedings of the first conference organized by the European Group for Eye Movement Research with the theme "Eye Movements: Current Research and Methodology". The conference was held at the Department of Psychology, University of Bern, Switzerland in 1981. The book is divided into four parts covering: Methods; Central and Peripheral Processing; Picture Viewing and Visual Tracking; and

Cognitive Processes and Reading. Each part is introduced by one of the session chairpersons of the conference.

Respiratory System/heart (excluding Special Contrast Studies) Lippincott Williams & Wilkins

An anthropologist typically does research by immersing oneself in a society, learning the language if need be, spending a year or two observing, asking questions, getting involved, photographing, videotaping, and writing copious notes on how people live their lives; in other words, on how they experience and manifest their culture. Anthropologists call that method participant observation, and the goal is to produce a cultural description that can be shared with any and all who might be interested. This book describes three cultures in a single, integrated narrative. For one, it offers a case study of the culture of anthropology itself as it records how I experienced ethnographic research as both a method and a way of life. My original goal was to describe the culture of chiropractic as a prominent and important field of alternative medicine. As is common in anthropology, that seemingly straight-forward objective detoured in an

unanticipated direction. I accomplished my purpose by graduating from a chiropractic college as a Doctor of Chiropractic (D.C.). Still another unanticipated diversion in this complex ethnographic adventure led to medical school, but not in an accredited institution in the United States. Taking a leave of absence from my professorship at Mills College, I eventually graduated from a Mexican medical school as a Doctor of Medicine (M.D.). I earned qualifications in medicine and surgery by entering the profession through a back door.

Build your skills in the assessment of musculoskeletal pathology! Orthopedic Physical Assessment, 7th Edition covers

the principles of assessment for all of the body's structures and joints, including topics such as gait, posture, the head and face, amputees, primary care, and sports emergencies. The 7th edition offers additional functional assessment forms (e-tools), updated evidence-based reliability and validity tables, and hundreds of video clips demonstrating special tests on how to perform musculoskeletal assessment. Written by noted PT educators David J. Magee and Robert C. Manske, this reference uses a systematic, evidence-based approach to prepare you for success in clinicals, board exams, and in rehabilitation practice. Over 2,500 full-color illustrations and photographs depict key concepts, along with assessment techniques and special tests. At-a-glance icons show the clinical utility of special tests, supplemented by updated, evidence-based reliability and validity tables for tests and techniques Quick-reference data includes hundreds of summary boxes, red-flag and yellow-flag boxes, differential diagnosis tables, muscle and nerve tables, and classification, normal values, and grading tables. A Summary (Précis) of Assessment in each

chapter serves as a review of assessment steps. Combined with other books in the Musculoskeletal Rehabilitation series — Scientific Foundations and Principles of Practice, Pathology and Intervention, and Athletic and Sports Issues — this book provides you with the knowledge and background necessary to assess and treat musculoskeletal conditions. NEW! Updated information in all chapters includes new special tests, as well as photos, line drawings, boxes, tables, and references. NEW! Head and Face chapter features updated information on concussion management. NEW! Enhanced Diagnostic Ultrasound Imaging section added to applicable chapters, along with new photos and diagnostic images. NEW! Updated psychometric tables for special tests list reliability, sensitivity, specificity, and + and - likelihood ratios when available. NEW! More case studies present real-life scenarios to help you develop assessment and diagnostic skills using information from the chapter. NEW! Additional functional assessment forms (e-tools) have been incorporated. NEW! Video clips demonstrate special tests to give you a clearer understanding of how to perform

musculoskeletal assessment. NEW! Enhanced ebook version, included with print purchase, provides access to all of the text, figures, and references from the book on a variety of devices.

A Clinico-Radiologic Approach

iUniverse

Specialty publication (from parent Physicians' desk reference) for physicians practicing in radiology and nuclear medicine. Pharmaceutical products discussed are not necessarily covered by PDR. Contents consist of editorial section on current practices in nuclear medicine, Product information section, and indexes to manufacturers and products. 2d ed., 1972, includes a section about manufacturers of specialized instruments and equipment.
