Building an Evidence-Based Practice BoD – Books on Demand

Struggling to do a project or dissertation, evaluate published research or conduct your own research? Help is at hand with this 5th edition of *Research Methods for Clinical Therapists*, which explains, in a clear and simple manner, how to evaluate existing research and how to conduct your own research. Aimed at undergraduate and postgraduate students, as well as the practising health care professional, the focus of the text is the design and analysis of experimental studies. These are vital to the effectiveness studies that are central to the work of the healthcare professional. Specific examples from different areas of healthcare are used to explain the core research concepts and relate them to clinical situations. Statistical theory and jargon are kept to a minimum. 'Key concept' boxes to explain technical research terms Activities and exercises (with answers provided in an appendix) to reinforce learning Sample critique of a published research article Comprehensive coverage of the key components of a robust research study Explanation of basic mathematical concepts Extended section on calculating sample sizes Guidelines on the preparation of posters Calculation of Inter-rater reliability measures, including Cohen's Kappa, ICC (interclass correlation) and Bland-Altman graphs of inter-rater agreement Introduction to Receiver Operating Characteristics, for use in screening and diagnostic testing against gold-standards The Thurstone Paired Comparison Technique, valuable in capturing the user voice on a variety of service planning, design and development issues Undertaking Systematic Reviews Relevant further reading for each chapter to support readers in their work.

Understanding Nursing Research Elsevier Health Sciences

"Child injuries have been neglected for many years, and are largely absent from child survival initiatives presently on the global agenda. Through this World report on child injury prevention, the World Health Organization, the United Nations Children's Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities. The knowledge and experience of nearly two hundred experts from all continents and various sectors were invaluable in grounding the report in the realities faced in many countries. This World report on child injury prevention should be seen as a complement to the UN Secretary-General's study on violence against children released in late 2006. That report addressed violence-related or intentional injuries. Both reports suggest that child injury and violence prevention programmes need to be integrated into child survival and other broad strategies focused on improving the lives of children. Evidence demonstrates the dramatic successes in child injury prevention in countries which have made a concerted effort. These results make a case for increasing investments in human resources and institutional capacities. This would permit the development, implementation and evaluation of programmes to stem the tide of child injury and enhance the health and well-being of children and their families the world over. Implementing proven interventions could save more than a thousand children's lives a day." - p. vii.

The Birth Mandalas book includes mandala art, a guided visualization and thought provoking exercises for an empowering childbirth experience. A birth mandala is sacred art for childbirth. The mandala appears from a dark background, like the baby emerging from the darkness of the womb into the light. Enjoy creative processes that access the subconscious. The way childbirth is perceived influences labor and birth. Subconscious beliefs, formed from what you've seen, heard or experienced, can either sabotage or affirm your conscious intentions. Learn how to effortlessly re-write limiting beliefs with ones that assist you during childbirth. Your birth mandala embodies your new beliefs and vision for labor and birth with symbols, images, designs and words. You will find women's mandalas, journals and their after-birth reflections. From Shannon's healing of past sexual abuse, Amy's strength and courage, to Stacy's power of intention, the themes and revelations are as unique as their mandalas. Creating a birth mandala is an invaluable gift you give yourself for childbirth. "It is the gift that keeps on giving," exclaims Stacy, a workshop participant.

Evidence-Based Practice: An Implementation Guide for Healthcare Organizations was created to assist the increasing number of hospitals that are attempting to implement evidence-based practice in their facilities with little or no guidance. This manual serves as a guide for the design and implementation of evidence-based practice systems and provides practice advice, worksheets, and resources for providers. It also shows institutions how to achieve Magnet status without the major investment in consultants and external resources.

Appraising Evidence for Nursing Practice Lippincott Williams & Wilkins

Learn how to evaluate and apply research with the #1 nursing research book! Understanding Nursing Research: Building an Evidence-Based Practice is known for its authoritative content, a time-tested step-by-step approach, and abundant use of research examples. With improved clarity and readability, the new edition strengthens its focus on evidence-based practice to better demonstrate how the steps of the research process relate to evidence-based nursing. Written by two of the leaders in the field of nursing research, Nancy Burns and Susan K. Grove, this full-color text offers unique insights into understanding, appraising, and applying published research to evidence-based practice. Authoritative content is written by two of the true pioneers in nursing research, who offer unique, first-hand insights into the field. Research examples provide practice in working with published studies, with many of the examples including Critical Appraisal and Implications for

Practice sections. A clear, step-by-step organization introduces the research process and demonstrates how this systematic framework relates to evidence-based practice. An expanded emphasis on evidence-based practice helps you develop skills in studying and appraising published research, so you are prepared for your role in working with research evidence. Enhanced coverage of qualitative research allows you to approach research questions and clinical questions with an unbiased view of the researcher's methodology. Two different appraisal processes are included: A traditional in-depth critical appraisal process prepares you for graduate-level work in research. A concise, practice-focused research appraisal process equips you for quick and accurate evaluation of the applicability of research findings to clinical practice. Updated research examples prepare you for evidence-based practice by using the physiologic conditions and hospitalized patients seen in clinicals.
