Spatial Anthropology
draws together a number
of interrelated strands of

research focused on
landscape, place and
cultural memory in the
north-west of England. At
the core of the book lies
an engagement with the
methodological
opportunities offered by
new interdisciplinary
frameworks of research
and practice that have
emerged in the wake of a
putative 'spatial turn' in

arts and humanities
scholarship in recent
years. The spatial
methods explored in the
book represent a
consolidation of site-
specific interventions
enacted in landscapes
located in the north-west
and beyond. Utilising
digital tools and
geospatial technologies
alongside ethnographic,

performative and autoethnographic modes of spatio-cultural analysis, spatial anthropology is presented as a geographically immersive and critically reflexive set of practices designed to explore the embodied and increasingly multi-faceted spatialities of place, mobility and memory. From the radically placeless environment of a motorway traffic island, to the 'affective archipelago' of former cinema sites, or the 'songlines' and micro-geographies of musical

memory, Spatial Anthropology offers a rich tapestry of landscapes, practices and spatial stories that speaks to both the particularities of place and locality as well as the more delocalised topographies of regional, national and global mobility.

Brings the reader up-to-date on the developments in GBR over the past 20 years. The first four chapters focus on the basic science of GBR in

implant dentistry. Helps the reader to understand the biologic and biomaterial background of this well-documented and well-established surgical technique in implant dentistry—essential knowledge for the use of barrier membranes in patients. Focuses on the clinical applications of GBR. Presents specific indications and describes the criteria for patient selection, the step-by-step surgical procedure, and aspects of postoperative treatment. Reflects the immense

progress of GBR in the past 10 to 15 years and the current clinical status of GBR in implant dentistry. Like its predecessor, is a must-have resource for all clinicians with interest and experience in implant dentistry. [editor].

The book provides information on the major EEW systems in operation and on the state-of-the-art of the different blocks forming an EW system: the rapid detection and estimation of the earthquake's focal

parameters, the signal transmission, the engineering interface and the information reliability/false alarm problem. It is the first time that so many aspects of EEW systems have been specifically focused upon within a single book.

There remains an urgent need for a deeper discussion of the theoretical, political and federal dimensions of the European codification project. While much valuable work has already been undertaken, the

chapters in this volume take as their starting point the proposition that further reflection and critical thought will enhance the quality and efficacy of the on-going work of the various codification bodies. The volume contains chapters by representatives of the Common Frame of Reference, the Study Group and the Acquis Group as well as by those who have not been involved in particular projects but who have previously commented more distantly on their

work - for instance those belonging to the Trento Group, and the Social Justice Group. The chapters between them represent the most comprehensive attempt so far to survey the state of the codification project, its theoretical, political and federal foundations and the future prospects for enforcement and compliance.

"Regenerating damaged organs and tissues, an act that once was considered magic, is currently

entrusted to the surgeons who have allowed us to move from replacement and reconstructive plastic surgery to regenerative plastic surgery, through autologous and allogeneic cell-based therapies and growth factors. The enthusiasm for regenerative plastic surgery and for the treatment of some pathologies addressed by it, such as breast reconstruction, hemifacial atrophy, burns, scars, and aesthetic improvements such as breast and buttock augmentation,

face rejuvenation and hair regrowth, has led the author, Professor Pietro Gentile, to rigorously investigate the possible new minimally invasive strategies based on adipose-derived stem cells, human follicle stem cells and growth factors contained in platelet-rich plasma. This book reports on the latest knowledge regarding the treatment of soft and bone tissue defects. Therefore, the goal of this text is to introduce and definitively establish this new and interesting field of plastic

surgery, called regenerative plastic surgery"--

 Bone and Soft Tissue Augmentation in Implantology addresses useful methods of bone grafting procedures in implant treatment based on current biologic principles and constitutes a unique reference in this field. The book describes, in over 760 pages and 2837 mostly color illustrations, the different possibilities available to

augment the bone volume in width and height. The information presented includes not only the underlying scientific concepts of the different augmentation techniques with autogenous bone, but also the associated soft tissue management, from safe approaches to different possibilities for soft tissue augmentation and papilla reconstruction techniques. The book provides surgeons with a basic understanding of the biologic response to bone grafting procedures. Experienced

implantologists will benefit from the in-depth background information, details of high-level surgical techniques, and scientific results, which will enable them to optimize their surgical procedures. Each chapter offers a wealth of information on the specific topic covered, with much attention given to the scientific concepts behind each one. Extensive case reports with step-by-step documentation allow readers to gain an impression of what is

possible today in the 3D reconstruction procedures of the alveolar crest. Important criteria for success are presented as well as possible complications and their treatment. Bone and Soft Tissue Augmentation in Implantology is a must-read for every implantologist, oral and maxillofacial surgeon, and any dentist interested in surgery. Monsanto Sensio Sa A rallying cry to link the food justice movement to broader social justice debates The United States

is a nation of foodies and food activists, many of them progressives, and yet their overwhelming concern for what they consume often hinders their engagement with social justice more broadly. Food Justice Now! charts a path from food activism to social justice activism that integrates the two. It calls on the food-focused to broaden and deepen their commitment to the struggle against structural inequalities both within and beyond the food system. In an engrossing,

historically grounded, and ethnographically rich narrative, Joshua Sbicca argues that food justice is more than just a myopic focus on food, allowing scholars and activists alike to investigate the causes behind inequities and evaluate and implement political strategies to overcome them. Focusing on carceral, labor, and immigration crises, Sbicca tells the stories of three California-based food movement organizations, showing that when activists use food to

confront neoliberal capitalism and institutional racism, they can creatively expand how to practice and achieve food justice. Sbicca sets his central argument in opposition to apolitical and individual solutions, discussing national food movement campaigns and the need for economically and racially just food policies—a matter of vital public concern with deep implications for building collective power across a diversity of interests.

Digital planning of implant therapy ensures predictable and successful treatment by allowing clinicians to visualize the surgical procedure before they perform it. With this goal in mind, this book lays out the latest research on implant dentistry as well as effective case presentations to demonstrate cutting-edge imaging and surgical techniques. Readers are guided through the

process of using digital tools at every stage of treatment, from developing the treatment plan to surgical execution. The authors detail the specifications of guided surgical procedures, review the latest 3D radiology options and software currently available, and present full case studies with stunning photographs. As implant dentistry relies more and more on digital technology, clinicians owe it to their patients to educate themselves on the most current tools

available, and this book is the perfect place to start. **Geography and Revolution** FedOA - Federico II University Press
Debian GNU/Linux, a very popular non-commercial Linux distribution, is known for its reliability and richness. Built and maintained by an impressive network of thousands of developers throughout the world, the Debian project is cemented by its social contract. This foundation text defines the project's objective: fulfilling the

needs of users with a 100% free operating system. The success of Debian and of its ecosystem of derivative distributions (with Ubuntu at the forefront) means that an increasing number of administrators are exposed to Debian's technologies. This Debian Administrator's Handbook, which has been entirely updated for Debian 8 "Jessie", builds on the success of its 6 previous editions. Accessible to all, this book teaches the essentials to anyone who wants to become an

effective and independent Debian GNU/Linux administrator. It covers all the topics that a competent Linux administrator should master, from installation to updating the system, creating packages and compiling the kernel, but also monitoring, backup and migration, without forgetting advanced topics such as setting up SELinux or AppArmor to secure services, automated installations, or virtualization with Xen, KVM or LXC. This book is not only designed for

professional system administrators. Anyone who uses Debian or Ubuntu on their own computer is de facto an administrator and will find tremendous value in knowing more about how their system works. Being able to understand and resolve problems will save you invaluable time. Learn more about the book on its official website: debian-handbook.info

Implant dentistry has become a standard option for the rehabilitation of

fully and partially edentulous patients. With the ever-increasing number of dentists involved in implant dentistry, it is essential to ensure that their treatment methods follow the highest standard. The ITI Treatment Guide series, a compendium of evidence-based implant-therapy techniques in daily practice, is written by renowned clinicians and provides a comprehensive overview of various therapeutic options. Using an illustrated step-by-step

approach, the ITI Treatment Guide shows practitioners how to manage different clinical situations, with the emphasis on sound diagnostics, evidence-based treatment concepts, and predictable treatment outcomes. The second volume of the ITI Treatment Guide is devoted to the restoration of partially dentate patients. Central to this volume of the ITI Treatment Guide are loading protocols available to the clinician and the patient and how

they relate to various treatment indications, including both single and multiple missing teeth in the posterior and anterior regions of the mouth. Among potential topics for upcoming volumes are implant placement in extraction sockets, loading protocols in edentulous patients, implant therapy in the esthetic zone in extended edentulous spaces, and many more. *20 Years of Guided Bone Regeneration in Implant Dentistry* Quintessenz Verlag

Building on the achievements of Goethe in his Theory of Colour, Rudolf Steiner shows how colour affects us in many areas of life, including our health, our sense of well-being, and our feelings. Distinguishing between 'image' and 'lustre' colours, he lays the foundation, based on his spiritual-scientific research, for a practical technique of working with colour that leads to a new direction in artistic creativity. His many penetrating remarks on some of the great painters

of the past are supplemented by a deep concern to see a cultural, spiritual renewal emerge in the present time. 'If you realize', he states, 'that art always has a relation to the spirit, you will understand that both in creating and appreciating it, art is something through which one enters the spiritual world.' This volume is the most comprehensive compilation of Rudolf Steiner's insights into the nature of colour, painting and artistic creation. It is an invaluable source of

reference and study not only for artists and therapists but for anyone interested in gaining an appreciation of art as a revelation of spiritual realities.

Nuestra Señora de la Soledad was founded in 1791 by a friar named Fermin Francisco de Lasuén. It was the thirteenth mission to be founded. Life at Soledad was challenging for everyone. The area

around Soledad was hot and dry in the summer and very cold in the winter. In the early 1800's an aqueduct was built to regularize the water supply, helping crops to grow, making life for both the friars and the Indians more manageable and less grueling. The content provided in this book, aligned to California state standards, will provide students with a greater insight into the story of Mission Nuestra Señora de la Soledad and California's mission system. This book is filled

with excellent primary source materials and visuals, including illustrations, paintings, and maps.

A term with myriad associations, revolution is commonly understood in its intellectual, historical, and sociopolitical contexts. Until now, almost no attention has been paid to revolution and questions of geography. *Geography and Revolution* examines the ways that place and space matter in a variety

of revolutionary situations. David N. Livingstone and Charles W. J. Withers assemble a set of essays that are themselves revolutionary in uncovering not only the geography of revolutions but the role of geography in revolutions. Here, scientific revolutions—Copernican, Newtonian, and Darwinian—ordinarily thought of as placeless, are revealed to be rooted in specific sites and spaces. Technical revolutions—the advent of print, time-keeping, and

photography—emerge as inventions that transformed the world's order without homogenizing it. Political revolutions—in France, England, Germany, and the United States—are notable for their debates on the nature of political institutions and national identity. Gathering insight from geographers, historians, and historians of science, *Geography and Revolution* is an invitation to take the where as seriously as the who and the when in examining the nature,

shape, and location of revolutions.

As a manufacturer of food and animal feed, seeds and chemical products, Monsanto is relentlessly developing and marketing new technologies. The monopoly it has arguably secured by dubious means bears no relation to its negligence with regard to potential risks. Particularly in light of the devastating consequences that are still causing suffering to people and the

environment in many places, the company's self-portrayal as a forward-looking, omnipotent force for good seems cynical. The photographer Mathieu Asselin, who lives in France and Venezuela, has tried his hand at the daunting task of exploring the issues surrounding Monsanto. His investigative photographic study manages to capture the complexity of this topic, creating links between past, present and future and illuminating many

different aspects from a variety of perspectives.

Freexian Science is on the cusp of a revolutionary breakthrough. We now understand more about ageing - and how to prevent and reverse it - than ever before. In *The Telomerase Revolution*, Dr Michael Fossel, who has been at the cutting edge of ageing research for decades, describes how telomerase will soon be used as a powerful

therapeutic tool, with the potential to intervene in age-related disease, dramatically extend life spans and even reverse human ageing.

Telomerase-based treatments are already on offer, and have shown early promise, but much more potent treatments will become available over the next decade. This is the definitive work on the latest science of human ageing, covering both the theory and the clinical implications, taking readers to the forefront of one of the most

remarkable advances in human medicine.

Parliamentary theory, practices, discourses, and institutions constitute a distinctively European contribution to modern politics. Taking a broad historical perspective, this cross-disciplinary, innovative, and rigorous collection locates the essence of parliamentarism in four key aspects—deliberation, representation,

responsibility, and sovereignty—and explores the different ways in which they have been contested, reshaped, and implemented in a series of representative national and regional case studies. As one of the first comparative studies in conceptual history, this volume focuses on debates about the nature of parliament and parliamentarism within and across different European countries, representative institutions, and genres of

political discourse.

We are inclined to see terrorist attacks as an aberration, a violent incursion into our lives that bears no intrinsic relation to the fundamental features of modern societies. But does this view misconstrue the relationship between terror and modernity? In this book, philosopher Donatella Di Cesare takes a historical approach and argues that terror is not a new phenomenon, but

rather one that has always been a key part of modernity. At its most basic level, terrorism is about the struggle for power and sovereignty. The growing concentration of power in the hands of the state, which is a constitutive feature of modern societies, sows the seeds of terrorism, which is deployed as a weapon by those who are exposed to the violence of the state and feel that they have no other recourse. As Di Cesare illustrates her argument with examples

ranging from the Red Brigades and 9/11 to jihadism and ISIS, her sophisticated analysis will appeal to anyone who wishes to understand contemporary terrorism more deeply, as well as to students and scholars of philosophy and political theory.
