High Performance Liquid Chromatography (HPLC)? The acronym HPLC, coined by the late Prof. Csaba Horváth for his 1970 Pittcon paper, originally indicated the fact that high pressure was used to generate the flow required for liquid chromatography in packed columns. In the beginning, pumps only had a pressure capability of 500 psi [35 bar]. It is used to provide information on the composition of drug related samples. The information obtained may be qualitative, indicating what compounds are present in Preview -

An Introduction to HPLC for Pharmaceutical Analysis HPLC stands for High Performance Liquid Chromatography. Its earlier name was High Pressure Liquid Chromatography because it involved use of liquid mobile phase requiring higher pressures than gases used in Gas Chromatography. What is HPLC/ High Performance Liquid Chromatography? HPLC stands for High Performance Liquid Chromatography. Before HPLC was available, LC analysis was carried by gravitational flow of the eluent (the solvent used for LC analysis) thus required several hours for the analysis to be completed. Even the improvements added in later time were able to shorten the analysis time slightly. Lesson 1: Introduction to HPLC -
