For undergraduate or  
graduate courses that  
include planning,  
conducting, and

evaluating research. A do-it-yourself, understand-it-yourself manual designed to help students understand the fundamental structure of research and the methodical process that leads to valid, reliable results. Written in uncommonly engaging and elegant prose, this text guides the reader, step-by-step, from the

selection of a problem, through the process of conducting authentic research, to the preparation of a completed report, with practical suggestions based on a solid theoretical framework and sound pedagogy. Suitable as the core text in any introductory research course or even for self-instruction, this text will

show students two things: 1) that quality research demands planning and design; and, 2) how their own research projects can be executed effectively and professionally.

and Finance: An Introduction

For undergraduate and MBA courses in Accounting and Finance. Gain a complete grounding in Accounting and Finance and develop skills to work with financial information

Accounting and Finance: An Introduction 10th Edition by Eddie McLaney and Peter Attrill contains all the information on

Accounting and Finance you need to start your career in business. With an emphasis on introducing topics in a step-by-step and accessible way, you will be taught how to understand and use financial information and reports, and will gain an appreciation of the key roles that both accounting and finance have to play in business decision-making. This bestselling text continues to be popular in universities and business schools, and makes the experience of

learning about accounting and finance relevant and practical through its use of real numerical accounting techniques, the inclusion of important international financial standards, an increased number of activities to encourage learning in an active way, and through a range of relevant, real-world examples, many of which are new to this edition. Covering financial accounting, management accounting and financial management in a single text, this book is focused on providing you with the

tools you need to make informed, successful business decisions. Also available with MyLab Accounting MyLab(tm) is the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. MyLab Accounting for this textbook includes over 1650 questions, now including a larger number of algorithmic questions

(more than 400) that require different numerical responses from different students. Learn more about MyLab Accounting. Note: MyLab Accounting is not included. Pearson, the world's learning company. Business Finance  
 In a conversational style, this market-leading text shows how to apply effective, realistic, research-based teaching practices in today's heterogeneous classrooms. Effective Teaching Methods: Research-Based Practice, 8/E, prepares teachers to meet the many challenges presented by the changing face of the American school and classroom teaching today-

and discover the opportunities for professional growth and advancement those changes provide. The content presented is the direct result of years of research and observation of effective teaching practices in actual classrooms. These are the experiences of real teachers in real classroom, showing teachers both what to do to meet today's teaching challenges, and how to do it. The 8th edition provides readers with new coverage of important

topics including Multiple Intelligences, professional learning communities, working with parents, and standardized testing.

Known for its unified and logical structure, lively writing style, and clear explanations, this book provides access to the most current economic information available. Since the 6/e published, many things have affected our economy: the Presidential Election, the impact of the 9/11 tragedy, and the

recession that we are all living through on a daily basis. The updated edition, written by two highly respected economists and educators, uses the “Stories, Graphs, and Equations” approach to make economic concepts accessible and relevant to a wide reading audience. A five-part organization covers an introduction to economics, concepts and problems in macroeconomics, goods and money markets, macroeconomic analysis, and the world economy.

For individuals getting their first—and often challenging—look at the core concepts of economics.

Accounting and Finance:  
An Introduction

[A Subject Index to Current Literature](#) Yale University Press

The rapid increase of cloud computing, high performance computing (HPC) and the vast growth in Internet and Social Media use have aroused

the interest in energy consumption and the carbon footprint of Data Centres. Data Centres primarily contain electronic equipment used for data processing (servers), data storage (storage equipment), and communications (network equipment). Collectively, this equipment processes, stores, and transmits digital information and is known as information technology (IT) equipment. Advanced Concepts for Renewable Energy Supply of Data Centres introduces a

number of technical solutions for the supply of power and cooling energy into Data Centres with enhanced utilisation of renewable energy sources in order to achieve low energy Data Centres. Because of the high energy density nature of these unique infrastructures, it is essential to implement energy efficiency measures and reduce consumption before introducing any renewable energy source. A holistic approach is used with the objective of

integrating many technical solutions such as management of the IT (Information Technology) load, efficient electrical supply to the IT systems, Low-Ex air-conditioning systems, interaction with district heating and cooling networks, re-use of heat, free cooling (air, seawater, groundwater), optimal use of heat and cold storage, electrical storage and integration in smart grids. This book is therefore a catalogue of advanced technical concepts that could be integrated into Data

Centres portfolio in order to increase the overall efficiency and the share of renewable energies in power and cooling supply. Based on dynamic energy models implemented in TRNSYS some concepts are deeply evaluated through yearly simulations. The results of the simulation are illustrated with Sankey charts, where the energy flows per year within the subsystems of each concept for a selected scenario are shown, and graphs showing the results of parametric

analysis. A set of environmental metrics (as the non-renewable primary energy) and financial metrics (CAPEX and OPEX) as well of energy efficiency metrics like the well-known PUE, are described and used to evaluate the different technical concepts.
