An informed look at the myths and fears surrounding nuclear energy, and a practical, politically realistic solution to global warming and our energy needs. Faced by the world's oil shortages and curious about alternative energy sources, Gwyneth Cravens skeptically sets out to find the truth about nuclear energy. Her conclusion: it is a totally viable and practical solution to global warming. In the end, we see that if we are to care for subsequent generations, embracing nuclear energy is an ethical imperative.

World-renowned

economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolu-

tion, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before.

Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials.

The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Product Description: Since the tragic events of 9/11 and the consequent advent of the Global War on Terrorism, there has been a remarkable surge of interest in counterinsurgency. This anthology presents 27 articles on

counterinsurgency and irregular warfare, particularly highlighting and examining the U.S. Marine Corps' roles in conflicts from 1898 through 2007. It also includes an extensive bibliography of works on these conflicts. Continuing discussion and study of these subjects is of critical importance to the ongoing efforts of the United States and its allies in the Global War on Terrorism. The anthology is divided broadly into two halves: the first half presents historical examples of counterinsurgency involving the United States—from the Philippines and the "Banana Wars" up through Vietnam—while the second half addresses the nation's contemporary efforts in this regard. Articles cover the situations in Iraq, Afghanistan, and the Horn of Africa. The selected bibliography addresses a broad range of subjects: on higher-end operational/strategic level of war considerations, on geopolitical context, and on a varied array of related topics—political theory, historical case studies, failed states, cultural studies and analysis, and many others—that all provide

context or play a role in conducting a counterinsurgency and achieving success in the realm of irregular warfare. Colonel Stephen S. Evans, USMCR, researched and compiled this work as a field historian with the Marine Corps History Division. He has experience at various operational levels, both joint and multinational, in CONUS and overseas, and has performed duty with all three MEFs, MARFORLANT, MARFOREUR, and U.S. forces in Korea. He has also held a range of positions in administrative and educational roles at Quantico and the Pentagon. Colonel Evans holds a doctorate in history from Temple University and has published two historical monographs. *War Is a Racket* Crown Currency  
In this compelling history, Peter Chapman shows how the United Fruit Company took bananas from the jungles of Costa Rica to the halls of power in Washington, D.C., with not just clever marketing, but covert CIA operations, bloody coups and brutalised workforces. And how along the way they turned the banana into a blueprint for a new

model of unfettered global capitalism: one that serves corporate power at any cost. Bananas Amazon Crossing  
This book presents a comprehensive and critical historical overview of the role played by the US as a developer and consumer of tropical nature. -- Distributed by Syndetic Solutions, LLC. The Savage Wars Of Peace Univ of California Press  
It started very small and full of hope. But its daring campaigns have placed Fairtrade goods at the heart of the supermarket shelves. From bananas and coffee beans to cotton and chocolate, Fairtrade has grown to become an important global movement that has revolutionised the way we shop. As Harriet Lamb, Chief Executive of Fairtrade International, explains in this extensively revised and updated edition of her inspirational book, Fairtrade is about a better deal for workers and farmers in the developing world. It's about making sure the food on our plates, and shirts on our backs, don't rob people in other countries of the means to feed or clothe themselves. She explores the journey, through an

often unjust system, that Fairtrade items make from farm to consumer. And she uncovers the shocking cost of our demand for cheaper food. There is much still to be done. But by hard work and high ideals, Fairtrade is starting to transform the lives of over 7 million farmers, workers and their families, and is a powerful symbol of how extraordinary change can be achieved against all the odds - by us all.

Netflix's series adaptation of *One Hundred Years of Solitude* premieres December 11, 2024! One of the twentieth century's enduring works, *One Hundred Years of Solitude* is a widely beloved and acclaimed novel known throughout the world and the ultimate achievement in a Nobel Prize-winning career. The novel tells the story of the rise and fall of the mythical town of Macondo through the history of the Buendía family. Rich and brilliant, it is a chronicle of life, death, and the tragicomedy of humankind. In the beautiful, ridiculous, and tawdry story of the Buendía family, one sees all of humanity, just as in the history, myths,

growth, and decay of Macondo, one sees all of Latin America. Love and lust, war and revolution, riches and poverty, youth and senility, the variety of life, the endlessness of death, the search for peace and truth—these universal themes dominate the novel. Alternately reverential and comical, *One Hundred Years of Solitude* weaves the political, personal, and spiritual to bring a new consciousness to storytelling. Translated into dozens of languages, this stunning work is no less than an account of the history of the human race.

*Big Business and Dictatorships in Latin America* Wyatt North Publishing, LLC

An Indigenous environmental scientist breaks down why western conservationism isn't working--and offers Indigenous models informed by case studies, personal stories, and family histories that center the voices of Latin American women and land protectors. Despite the undeniable fact that Indigenous communities are among the most affected by climate devastation, Indigenous science is nowhere to be found in mainstream

environmental policy or discourse. And while holistic land, water, and forest management practices born from millennia of Indigenous knowledge systems have much to teach all of us, Indigenous science has long been ignored, otherized, or perceived as "soft"--the product of a systematic, centuries-long campaign of racism, colonialism, extractive capitalism, and delegitimization. Here, Jessica Hernandez--Maya Ch'orti' and Zapotec environmental scientist and founder of environmental agency Piña Soul--introduces and contextualizes Indigenous environmental knowledge and proposes a vision of land stewardship that heals rather than displaces, that generates rather than destroys. She breaks down the failures of western-defined conservatism and shares alternatives, citing the restoration work of urban Indigenous people in Seattle; her family's fight against ecoterrorism in Latin America; and holistic land management approaches of Indigenous groups across the continent. Through case studies, historical overviews, and stories that center the voices and

lived experiences of Indigenous Latin American women and land protectors, Hernandez makes the case that if we're to recover the health of our planet--for everyone--we need to stop the eco-colonialism ravaging Indigenous lands and restore our relationship with Earth to one of harmony and respect.

**The Fourth Industrial Revolution** University of California Press  
 The Banana Wars: United States Intervention in the Caribbean, 1898-1934 offers a sweeping panorama of America's tropical empire in the age spanned by the two Roosevelts and a detailed narrative of U.S. military intervention in the Caribbean and Mexico. In this new edition, Professor Langley provides an updated introduction, placing the scholarship in current historical context. From the perspective of the Americans involved, the empire carved out by the banana warriors was a domain of bickering Latin American politicians, warring tropical countries, and lawless societies that the American military had been dispatched to police and tutor. Beginning with the Cuban experience, Langley examines the

motives and consequences of two military occupations and the impact of those interventions on a professedly antimilitaristic American government and on its colonial agents in the Caribbean, the American military. The result of the Cuban experience, Langley argues, was reinforcement of the view that the American people did not readily accept prolonged military occupation of Caribbean countries. In Nicaragua and Mexico, from 1909 to 1915, where economic and diplomatic pressures failed to bring the results desired in Washington, the American military became the political arbiters; in Hispaniola, bluejackets and marines took on the task of civilizing the tropics. In the late 1920s, with an imperial force largely of marines, the American military waged its last banana war in Nicaragua against a guerrilla leader named Augusto C. Sandino. Langley not only narrates the history of America's tropical empire, but fleshes out the personalities of this imperial era, including Leonard Wood and Fred Funston, U.S. Army, who left their mark on Cuba

and Vera Cruz; William F. Fullam and William Banks Caperton, U.S. Navy, who carried out their missions imbued with old-school beliefs about their role as policemen in disorderly places; Smedley Butler and L.W.T.  When Samuel Zemurray arrived in America in 1891, he was gangly and penniless. When he died in New Orleans 69 years later, he was among the richest men in the world. He conquered the United Fruit Company, and is a symbol of the best and worst of the United States.

 The "Hikayat Banjar," a native court chronicle from Borneo, characterizes the irresistibility of natural resource wealth to outsiders as "the banana tree at the gate." Michael R. Dove employs this phrase as a root metaphor to frame the history of resource relations between the indigenous peoples of Borneo and the world system. In analyzing production and trade in forest products,

pepper, and especially natural rubber, Dove shows that the involvement of Borneo's native peoples in commodity production for global markets is ancient and highly successful and that processes of globalization began millennia ago. Dove's analysis replaces the image of the isolated tropical forest community that needs to be helped into the global system with the reality of communities that have been so successful and competitive that they have had to fight political elites to keep from being forced out.

The link between private corporations and U.S. world power has a much longer history than most people realize. Transnational firms such as the United Fruit Company represent an earlier stage of the economic and cultural globalization now taking place throughout the world. Drawing on a wide range of archival sources in the United States, Great Britain, Costa Rica, and Guatemala, Colby combines "top-down" and "bottom-up" approaches to provide new insight into the role of

transnational capital, labor migration, and racial nationalism in shaping U.S. expansion into Central America and the greater Caribbean. The *Business of Empire* places corporate power and local context at the heart of U.S. imperial history. In the early twentieth century, U.S. influence in Central America came primarily in the form of private enterprise, above all United Fruit. Founded amid the U.S. leap into overseas empire, the company initially depended upon British West Indian laborers. When its black workforce resisted white American authority, the firm adopted a strategy of labor division by recruiting Hispanic migrants. This labor system drew the company into increased conflict with its host nations, as Central American nationalists denounced not only U.S. military interventions in the region but also American employment of black immigrants. By the 1930s, just as Washington renounced military intervention in Latin America, United Fruit pursued its own Good Neighbor Policy, which brought a reduction in its corporate colonial power

and a ban on the hiring of black immigrants. The end of the company's system of labor division in turn pointed the way to the transformation of United Fruit as well as the broader U.S. empire.

"Spurious Correlations ... is the most fun you'll ever have with graphs." -- Bustle Military intelligence analyst and Harvard Law student Tyler Vigen illustrates the golden rule that "correlation does not equal causation" through hilarious graphs inspired by his viral website. Is there a correlation between Nic Cage films and swimming pool accidents? What about beef consumption and people getting struck by lightning? Absolutely not. But that hasn't stopped millions of people from going to tyelvigen.com and asking, "Wait, what?" Vigen has designed software that scours enormous data sets to find unlikely statistical correlations. He began pulling the funniest ones

for his website and has since gained millions of views, hundreds of thousands of likes, and tons of media coverage. Subversive and clever, Spurious Correlations is geek humor at its finest, nailing our obsession with data and conspiracy theory.

In 2001, the EU and US announced the end of a trade dispute over the sale of bananas into the EU market. The allocation of import licences had been found to violate World Trade Organization rules and to discriminate against suppliers from Latin America. This book examines the issues surrounding the dispute, in particular: the dependence of small Caribbean economies on European Banana Markets; the role of the private sector in influencing public policy; the relation between the banana trade and the political tensions of the EU Common Agricultural Policy; the domestic political influence of banana companies in the US and the role of the WTO and its settlement of trade disputes.

In this brand new radical analysis of globalization, Cynthia Enloe examines recent events—Bangladeshi garment factory deaths, domestic workers in the Persian Gulf, Chinese global tourists, and the UN gender politics of guns—to reveal the crucial role of women in international politics today. With all new and updated chapters, Enloe describes how many women's seemingly personal strategies—in their marriages, in their housework, in their coping with ideals of beauty—are, in reality, the stuff of global politics. Enloe offers a feminist gender analysis of the global politics of both masculinities and femininities, dismantles an apparently overwhelming world system, and reveals that system to be much more fragile and open to change than we think.

Grains - particularly maize, rice, and wheat - are the central component of most people's diets, but we rarely stop to think about the wider role they play in national and international policy-making, as well as global issues like food

security, biotechnology, and even climate change. But why are grains so important and ubiquitous? What political conflicts and economic processes underlie this dominance? Who controls the world's supply of grains and with what outcomes? In this timely book, Bill Winders unravels the complex story of feed and food grains in the global economy. Highlighting the importance of corporate control and divisions between grains - such as who grows them, and who consumes them - he shows how grains do not represent a unitary political and economic force. Whilst the differences between them may seem small, they can lead to competing economic interests and policy preferences with serious and, on occasions, violent geopolitical consequences. This richly detailed and authoritative guide will be of interest to students across the social sciences, as well as anyone interested in current affairs.

'It is terrific. I can't remember the last time I read a book that was more fascinating and useful and enjoyable all at the same time.' Bill Bryson *How Bad Are*

Bananas? was a groundbreaking book when first published in 2009, when most of us were hearing the phrase 'carbon footprint' for the first time. Mike Berners-Lee set out to inform us what was important (aviation, heating, swimming pools) and what made very little difference (bananas, naturally packaged, are good!). This new edition updates all the figures (from data centres to hosting a World Cup) and introduces many areas that have become a regular part of modern life - Twitter, the Cloud, Bitcoin, electric bikes and cars, even space tourism. Berners-Lee runs a considered eye over each area and gives us the figures to manage and reduce our own carbon

footprint, as well as to lobby our companies, businesses and government. His findings, presented in clear and even entertaining prose, are often surprising. And they are essential if we are to address climate change.

Bloomsbury Publishing  
This edited volume studies the relationship between big business and the Latin American dictatorial regimes during the Cold War. The first section provides a general background about the contemporary history of business corporations and dictatorships in the twentieth century at the international level. The second section comprises chapters that analyze five national cases (Argentina, Brazil, Chile, Uruguay and Peru), as well as a

comparative analysis of the banking sector in the Southern Cone (Argentina, Brazil, Chile, and Uruguay). The third section presents six case studies of large companies in Argentina, Brazil, Chile, Colombia and Central America. This book is crucial reading because it provides the first comprehensive analysis of a key yet understudied topic in Cold War history in Latin America.
