The poultry sector continues to grow and industrialize in many parts of the world. An increasing human population, greater purchasing power and urbanization have been strong drivers of growth. A clear division is developing between industrialized production systems of large and medium size feeding into integrated value chains, and extensive production systems supporting livelihoods and supplying local or niche markets. The primary role of the former is to supply cheap and safe food to populations often distant from the source of supply, while the latter acts as a livelihood safety net, often as part of a diverse portfolio of income sources. Understanding how poultry production systems and value chains work is essential in order to develop a country's poultry sector sustainably. This review for Tanzania is part of a series of Livestock Country Reviews developed by FAO's Animal Production and Health Division (AGA). The reviews aim to support sustainable and effective development interventions and policy recommendations and contribute to informed

decision-making and investments in the poultry sector by: (i) providing information and data about national poultry supply chains (with a special focus on poultry production); (ii) analysing strengths, weaknesses and prospects along the supply chain; and (iii) identifying opportunities for poultry sector development.

Commercial Chicken Meat and Egg Production is the 5th edition of a highly successful book first authored by Dr. Mack O. North in 1972, updated in 1978 and 1984. The 4th edition was co-authored with Donald D. Bell in 1990. The book has achieved international success as a reference for students and commercial poultry and egg producers in every major poultry producing country in the world. The 5th edition is essential reading for students preparing to enter the poultry industry, for owners and managers of existing poultry companies and for scientists who need a major source of scientifically based material on poultry management. In earlier editions, the authors emphasized the chicken and its management. The 5th edition, with the emphasis shifted to the commercial business of managing poultry, contains over 75% new material. The contributions of 14 new authors make this new edition the most comprehensive such book available. Since extensive references are made to the international aspects of poultry management, all data are presented in both the Imperial and Metric form. Over 300 tables and 250 photos and figures support 62 chapters of text. New areas include processing of poultry and eggs with thorough discussions of food safety and further processing. The business of maintaining poultry is discussed in chapters on economics, model production firms, the use of computers, and record keeping. Updated topics include: breeders and hatchery operations; broiler and layer flock management; replacement programs and management of replacements; nutrition; and flock health. New chapters address flock behavior, ventilation, waste management, egg quality and egg breakage. Other new features include a list of more than 400 references and a Master List of the tables, figures, manufacturers of equipment and supplies, research institutions, books and periodicals, breeders, and trade associations. Commercial growers will find the tables of data of particular interest; scientists will be able to utilize the extensive references and to relate their areas of interest to the commercial industry's applications; and

students will find that the division of the book into 11 distinct sections, with multiple chapters in each, will make the text especially useful.

This book examines the successful private, public and civil society models of agriculture value chains in India and addresses relevant challenges and opportunities to improve their efficiency and inclusiveness. It promotes the value-chain approach as a tool to improve access to finance for small holder farmers and discusses the possible structure of and regulatory framework for the 'National Common Agricultural Market'— a term that featured in the Indian Finance Minister's 2014–15 budget speech, and which is aimed towards standardizing and improving transparency in agricultural trade practices across states under a single licensing system. The book deliberates on the potential of developing innovative financial instruments into the value chain framework by supporting tripartite agreements between producers, lead firms and financial institutions. Its fourteen chapters are divided into three parts—Agriculture Value Chain Financing: Theoretical Framework, Agriculture Value Chain Financing in Cases of Select Commodities; and Institutional Framework for Agriculture Value Chain Financing. Since the concept of value chain financing is being considered as a future policy agenda, the book is of great interest to corporations dealing with agricultural inputs and outputs; commercial, regional, rural and cooperative banks; policy makers; academicians and NGOs.

According to surveys, the public believes the chickens it is buying are wholesome. Poultry Inspection: The Basis for a Risk-Assessment Approach looks at current inspection procedures to determine how effective the Food Safety Inspection Service is in finding dangerous levels of contaminants and disease-producing microorganisms. The book first describes the history behind the current system, noting that the amount of poultry inspected has increased dramatically while techniques and regulations have remained constant since 1968. The steps involved in an inspection are then described, followed by a discussion of alternative and innovative inspection procedures. It then provides a risk-assessment model for poultry, including submodels for each stage of processing. Risk assessment is used to protect health, establish priorities, identify problems, and set acceptable levels of risk. The model is applied both to microbiological hazards and to chemical

contaminants.
