Cities, Regions and Flows Routledge

Human geography, as a subject, has become widely recognized since its connections with the social sciences have widened and deepened the study of people, places and social structures. *Horizons in Human Geography* provides a clear and accessible sketch map of some of the latest and most promising developments in the subject. The book starts by assessing the role and limitations of techniques, models and theories and proceeds to provide a broad-ranging overview of the major social, cultural, urban, regional, political, economic and environmental issues confronting geographers today. Contents: Introduction; Part I: Beyond The Quantitative Revolution; Part II: People and Places, Societies and Spaces; Part III: Explorations in the City; IV: Landscapes of Production; Part V: Regional Geographies and Global Perspectives; Part VI: Politicising The Environment. Understanding Cultural Geography: Places and Traces offers a comprehensive introduction to perhaps the most exciting and challenging area of human geography. By focusing on the notion of 'place' as a key means through which culture and identity is grounded, the book showcases the broad range of theories, methods and practices used within the discipline. This book not only introduces the reader to the rich and complex history of cultural geography, but also the key terms on which the discipline is built. From these insights, the book approaches place as an 'ongoing composition of traces', highlighting the dynamic and ever-changing nature of the world around us. The second edition has been fully revised and updated to incorporate recent literature and up-to-date case studies. It also adopts a new seven section structure, and benefits from the addition of two new chapters: Place and Mobility, and Place and Language. Through its broad coverage of issues such as age, race, scale, nature, capitalism, and the body, the book provides valuable perspectives into the cultural relationships between people and place. Anderson gives critical insights into these important issues, helping us to understand and engage with the various places that make up our lives. *Understanding Cultural Geography* is an ideal text for students being introduced to the discipline through either undergraduate or postgraduate degree courses. The book outlines how the theoretical ideas, empirical foci and methodological techniques of cultural geography illuminate and make sense of the places we inhabit and contribute to. This is a timely update on a highly successful text that incorporates a vast foundation of knowledge; an invaluable book for lecturers and students.

The Geography of the World Economy Prentice Hall

Introducing Human Geographies is the leading guide to human geography for undergraduate students, explaining new thinking on essential topics and discussing exciting developments in the field. This new edition has been thoroughly revised and updated and coverage is extended with new sections devoted to biogeographies, cartographies, mobilities, non-representational geographies, population geographies, public geographies and securities. Presented in three parts with 60 contributions written by expert international researchers, this text addresses the central ideas through which human geographers understand and shape their subject. Part I: Foundations engages students with key ideas that define human geography's subject matter and approaches, through critical analyses of dualisms such as local-global, society-space and human-nonhuman. Part II: Themes explores human geography's main sub-disciplines, with sections devoted to biogeographies, cartographies, cultural geographies, development geographies, economic geographies, environmental geographies, historical geographies, political geographies, population geographies, social geographies, urban and rural geographies. Finally, Part III: Horizons assesses the latest research in innovative areas, from mobilities and securities to non-representational geographies. This comprehensive, stimulating and cutting edge introduction to the field is richly illustrated throughout with full colour figures, maps and photos. Cities and Design SAGE

Cities, Regions and Flows presents a theoretical framework for understanding the changing relationship between places and physical movement, and thoughtfully prepared case studies from five continents on how cities relate to value chains, and how they ensure accessibility and urban liveability in an increasingly contested policy environment. Moreover, the book discusses how urban policies attempt to solve related conflicts in terms of infrastructure provision, land use, local labour markets and environmental sustainability. The two subsystems that are of major interest here - urban regions on the one hand, and logistics management and physical distribution on the other - develop in quite distinct, and often contradictory, ways. Whereas urban regions face disintegration due to the expansion of the built environment and the spatio-temporal fragmentation of life-worlds and regional systems, the logistics system itself demands integration in order to keep flows moving and to reduce costs. Physical flows, networks and chains thus have a fundamental impact on urban restructuring.

Key Concepts in Urban Geography Routledge

The Cultural Landscape John Wiley & Sons Incorporated

This book cogently examines how human geography has developed from a field with limited self-awareness regarding method and theory to the vibrant study of society and space that it is today. Kevin R. Cox provides an interpretive, critical perspective on Anglo-American geographic thought in the 20th and 21st centuries. He probes the impact of the spatial-quantitative revolution and

geography's engagement with other social sciences, particularly in social theory. Key concepts and theories in the field are explained and illustrated with instructive research examples. Cox explores both how new approaches to human geography get constructed and what each school of thought has contributed to understanding the world in which we live.

"Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—*The Washington Post Book World* (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. "Takes readers far beyond *Cosmos* . . . Sagan sees humanity's future in the stars."—*Chicago Tribune*

Human Geography: Places and Regions in Global Context takes a fresh approach to human geography, reflecting the major changes that have recently been impressed on global, regional, and local landscapes. These changes include the globalization of industry, the rise of China and India, the upwelling of ethnic regionalisms on the heels of decolonization and the formation of new states, the

rapid urbanization of the periphery and the physical restructuring of cities, the transformation of traditional agricultural practices, the trend toward transnational political and economic organizations, and the dramatic advances in information and communication technologies. Human Geography: Places and Regions in Global Context introduces the many new ideas, concepts, and theories that address these changes while also teaching the fundamentals of human geography: the principles, concepts, theoretical frameworks, and basic knowledge that are necessary to more specialized studies.

Spaces of Geographical Thought National Academies Press

Spaces of Geographical Thought examines key ideas - like space and place - which inform the geographic imagination. The text: discusses the core conceptual vocabulary of human geography: agency: structure; state: society; culture: economy; space: place; black: white; man: woman; nature: culture; local: global; and time: space; explains the significance of these binaries in the constitution of geographic thought; and shows how many of these binaries have been interrogated and re-imagined in more recent geographical thinking. A consideration of these binaries will define the concepts and situate students in the most current geographical arguments and debates. The text will be required reading for all modules on the philosophy of geography and on geographical theory.
