Why do major historical
events such as the

Holocaust occupy the
forefront of the
collective
consciousness, while
profound moments
such as the Armenian
genocide, the
McCarthy era, and
France's role in North
Africa stand distantly
behind? Is it possible
that history "overly
remembers" some
events at the expense
of others? A landmark

work in philosophy, Paul Ricoeur's *Memory, History, Forgetting* examines this reciprocal relationship between remembering and forgetting, showing how it affects both the perception of historical experience and the production of historical narrative. *Memory, History, Forgetting*, like its title, is divided into three major sections. Ricoeur first takes a phenomenological approach to memory and mnemonical devices. The underlying question here is how a memory of present can be of something absent, the past. The second section addresses recent work by historians by reopening the question of the nature and truth of historical knowledge.

Ricoeur explores whether historians, who can write a history of memory, can truly break with all dependence on memory, including memories that resist representation. The third and final section is a profound meditation on the necessity of forgetting as a condition for the possibility of remembering, and whether there can be something like happy forgetting in parallel to happy memory. Throughout the book there are careful and close readings of the texts of Aristotle and Plato, of Descartes and Kant, and of Halbwachs and Pierre Nora. A momentous achievement in the career of one of the most significant philosophers of our

age, Memory, History, Forgetting provides the crucial link between Ricoeur's *Time and Narrative and Oneself as Another* and his recent reflections on ethics and the problems of responsibility and representation. "His success in revealing the internal relations between recalling and forgetting, and how this dynamic becomes problematic in light of events once present but now past, will inspire academic dialogue and response but also holds great appeal to educated general readers in search of both method for and insight from considering the ethical ramifications of modern events. . . . It is indeed a master work, not only in Ricoeur's own vita but

also in contemporary European philosophy."—*Library Journal* "Ricoeur writes the best kind of philosophy—critical, economical, and clear."—*New York Times Book Review* *Living Fountains Or Broken Cisterns* University of Chicago Press
 ICTs and Sustainable Solutions for the Digital Divide: Theory and Perspectives focuses on Information and Communication Technologies for Development (ICT4D), which includes any technology used for communication and information. This publication researches the social side of computing, the users, and the design of systems that meet the needs of "ordinary" users.

A major work by one of the more innovative thinkers of our time, *Politics of Nature* does nothing less than establish the conceptual context for political ecology—transplanting the terms of ecology into more fertile philosophical soil than its proponents have thus far envisioned.

Bruno Latour announces his project dramatically: “Political ecology has nothing whatsoever to do with nature, this jumble of Greek philosophy,

French Cartesianism and American parks.” Nature, he asserts, far from being an obvious domain of reality, is a way of assembling political order without due process. Thus, his book proposes an end to the old dichotomy between nature and society—and the constitution, in its place, of a collective, a community incorporating humans and nonhumans and building on the experiences of the sciences as they are actually practiced. In a critique of the distinction between fact and value, Latour suggests a redescription of the type of political philosophy implicated in such a “commonsense” division—which here reveals itself as

distinctly uncommonsensical and in fact fatal to democracy and to a healthy development of the sciences. Moving beyond the modernist institutions of “mononaturalism” and “multiculturalism,” Latour develops the idea of “multinaturalism,” a complex collectivity determined not by outside experts claiming absolute reason but by “diplomats” who are flexible and open to experimentation.

"[Print Culture at the Crossroads](#) Delta This scholarly and accessible study presents “a provocative new reading” of the late sixteenth- and seventeenth-century advances in scientific inquiry (Kirkus Reviews). In *The Scientific Revolution*, historian Steven Shapin challenges the very idea that any such a “revolution” ever took place. Rejecting the narrative that a new and unifying paradigm suddenly took hold, he demonstrates how the conduct of science emerged from a wide array of early modern philosophical agendas, political commitments, and religious beliefs. In this analysis, early

modern science is shown not as a set of disembodied ideas, but as historically situated ways of knowing and doing. Shapin shows that every principle identified as the modernizing essence of science—whether it’s experimentalism, mathematical methodology, or a mechanical conception of nature—was in fact contested by sixteenth- and seventeenth-century practitioners with equal claims to modernity. Shapin argues that this contested legacy is nevertheless rightly understood as the origin of modern science, its problems as well as its acknowledged achievements. featuring the latest scholarship. “An excellent book.”

A scientist integrates evolutionary biology, genetics, psychology, economics, and more to explore the development and workings of human societies. “There is no good reason why human societies should not be described and explained with the same precision and success as the rest of nature.” Thus argues evolutionary psychologist Pascal Boyer in this uniquely innovative book. Integrating recent insights from evolutionary biology, genetics, psychology, economics, and other

fields, Boyer offers precise models of why humans engage in social behaviors such as forming families, tribes, and nations, or creating gender roles. In fascinating, thought-provoking passages, he explores questions such as: Why is there conflict between groups? Why do people believe low-value information such as rumors? Why are there religions? What is social justice? What explains morality? Boyer provides a new picture of cultural transmission that draws on the pragmatics of human communication, the constructive nature of memory in human brains, and human motivation for group formation and cooperation. “Cool and captivating...It will

change forever your understanding of society and culture.”—Dan Sperber, co-author of *The Enigma of Reason* “It is highly recommended...to researchers firmly settled within one of the many single disciplines in question. Not only will they encounter a wealth of information from the humanities, the social sciences and the natural sciences, but the book will also serve as an invitation to look beyond the horizons of their own fields.”—Eveline Seghers, *Evolutionary Studies in Imaginative Culture* *The Sublime Object of Ideology* Pearson Using Conflict Theory presents how and why conflict erupts, and how it can be

managed.

Twenty-three centuries after its compilation, 'The Politics' still has much to contribute to this central question of political science. Aristotle's thorough and carefully argued analysis is based on a study of over 150 city constitutions, covering a huge range of political issues in order to establish which types of constitution are best - both ideally and in particular circumstances - and how they may be maintained. Aristotle's opinions form an essential background to the thinking of philosophers such as Thomas Aquinas, Machiavelli and Jean Bodin and both his premises and

arguments raise questions that are as relevant to modern society as they were to the ancient world.

Consciousness

Zondervan
Practical and Gospel-centered thoughts on how to have a fruitful ministry by one of America's leading and most beloved pastor. Many church leaders are struggling to adapt to a culture that values individuality above loyalty to a group or

institution. There have been so many "church growth" and "effective ministry" books in the past few decades that it's hard to know where to start or which ones will provide useful and honest insight. Based on over twenty years of ministry in New York City, Timothy Keller takes a unique approach that measures a ministry's success neither by numbers nor purely by the faithfulness of its leaders, but on the biblical grounds of fruitfulness. Center Church outlines a balanced theological vision for ministry organized around three core commitments: Gospel-centered: The gospel of grace in Jesus Christ changes everything, from our hearts to our community to the

world. It completely reshapes the content, tone, and strategy of all that we do. City-centered: With a positive approach toward our culture, we learn to affirm that cities are wonderful, strategic, and underserved places for gospel ministry. Movement-centered: Instead of building our own tribe, we seek the prosperity and peace of our community as we are led by the Holy Spirit. "Between a pastor's doctrinal beliefs and ministry practices should be a well-conceived vision for how to bring the gospel to bear on the particular cultural setting and historical moment. This is something more practical than just doctrine but much more theological than

"how-to steps" for carrying out a ministry. Once this vision is in place, it leads church leaders to make good decisions on how to worship, disciple, evangelize, serve, and engage culture in their field of ministry—whether in a city, suburb, or small town." — Tim Keller, *Core Church Dictionary of Deities and Demons in the Bible* Cambridge University Press
Indonesia suffered an explosion of religious violence, ethnic violence, separatist violence, terrorism, and violence by criminal gangs, the security forces and militias in the late 1990s and early 2000s. By 2002 Indonesia had the worst terrorism problem of any nation. All these forms of

violence have now fallen dramatically. How was this accomplished? What drove the rise and the fall of violence? Anomie theory is deployed to explain these developments. Sudden institutional change at the time of the Asian financial crisis and the fall of President Suharto meant the rules of the game were up for grabs. Valerie Braithwaite's motivational postures theory is used to explain the gaming of the rules and the disengagement from authority that occurred in that era. Ultimately resistance to Suharto laid a foundation for commitment to a revised, more democratic, institutional order. The peacebuilding that

occurred was not based on the high-integrity truth-seeking and reconciliation that was the normative preference of these authors. Rather it was based on non-truth, sometimes lies, and yet substantial reconciliation. This poses a challenge to restorative justice theories of peacebuilding.

The Eloquence of Mary Astell makes an important contribution to the knowledge and understanding of the important role that women, and one woman in particular, played in the history of rhetoric. Mary Astell (1666-1731) was an unusually perceptive thinker and writer during the time of the Enlightenment. Here, author Christine Sutherland explores her importance as a rhetorician, an area that has, until recently, received little attention. Astell was widely known and respected during her own time, but her influence and reputation receded in the years after her death. Her importance as an Enlightenment thinker is becoming

more and more recognized, however. As a skilled theorist and practitioner of rhetoric, Astell wrote extensively on education, philosophy, politics, religion, and the status of women. She showed that it was possible for a woman to move from the semi-private form of rhetoric represented by conversation and letters into full public participation in philosophical and political debate.

Is there a theory that explains the essence of consciousness? Or is consciousness itself an illusion? Am I conscious now? Now considered the 'last great mystery of science', consciousness was once viewed with

extreme scepticism and rejected by mainstream scientists. It is now a significant area of research, albeit a contentious one, as well as a rapidly expanding area of study for students of psychology, philosophy, and neuroscience. This edition of *Consciousness*, revised by author team Susan Blackmore and Emily Troscianko, explores the key theories and evidence in consciousness studies ranging from neuroscience and psychology to quantum theories and philosophy. It examines why the term 'consciousness' has no recognised definition and provides an opportunity to delve into personal intuitions about the self, mind,

and consciousness. Featuring comprehensive coverage of all core topics in the field, this edition includes: Why the problem of consciousness is so hard Neuroscience and the neural correlates of consciousness Why we might be mistaken about our own minds The apparent difference between conscious and unconscious Theories of attention, free will, and self and other The evolution of consciousness in

animals and machines Altered states from meditation to drugs and dreaming Complete with key concept boxes, profiles of well-known thinkers, and questions and activities suitable for both independent study and group work, Consciousness provides a complete introduction to this fascinating field.
