Formal engineering
methods are intended to
offer effective means for
integration of formal

methods and practical
software development
technologies in the
context of software
engineering. Their
purpose is to provide
effective, rigorous, and
systematic techniques for
significant improvement
of software productivity,
quality, and tool
supportability. In

comparison with formal
methods, a distinct
feature of formal
engineering methods is
that they emphasize the
importance of the balance
between the qualities of
simplicity, visualization,
and preciseness for
practicality. To achieve
this goal, formal
engineering methods

must be developed on the basis of both formal methods and existing software technologies in software engineering, and they must serve the improvement of the software engineering process. ICFEM 2008 marks the tenth anniversary of the first ICFEM conference, which was held in Hiroshima in 1997. It aims to bring together researchers and practitioners who are interested in the development and application of formal engineering methods to

present their latest work and discuss future research directions. The conference offers a great opportunity for researchers in both formal methods and software engineering to exchange their ideas, experience, expectation and to find out whether and how their research results can help advance the state of the art.

Nuclear Science Abstracts
CRC Press

This volume provides a comprehensive overview of environmental aspects of the Sava River, which is

the greatest tributary to the Danube River and the major drainage river system of South Eastern Europe. Hydroelectric power plants, river traffic, intensive agricultural activities, heavy industry and floods have considerable influence on the environment and biota in the basin.

Summarizing the results that were gathered in the course of EU, bilateral and national projects, the book highlights the most important stressors and helps readers to better understand the impact of

anthropogenic activities on the function of river basins. Topics include: transboundary water cooperation between the riparian countries; climate change projection, including its impact on flood hazards; evaluation of anthropogenic pollution sources; pollution of sediments, metal bioavailability and ecotoxicological and microbiological characterization of the river. The biological part also addresses quality aspects related to wildlife in river aquatic

ecosystems (algae, macrophytes, zooplankton, macroinvertebrates and fish) and riparian ecosystems (amphibians, reptiles, birds and mammals). The general state of biodiversity and pressures caused by invasive aquatic species are also discussed.

MRC Technical Summary Report

Elsevier

This book is aimed at publishers, librarians, printers, communications professionals and anyone who has an interest in the

past, present and future of the book. It chronicles the early beginnings of printing technology and book publishing in the context of the book as a major cultural agent. The book discusses the print medium in light of challenges from non-paper communications technologies and how the book publishing industry can face these challenges in order to remain an important player in the extant multi-media market place by exploiting the technical and creative possibilities

afforded by newer digital printing technologies. Written by a highly knowledgeable and well respected academic and practitioner in the print media field Provides detailed technical information on conventional and digital reproduction technology Technology is discussed in the context of the cultural evolution of communication

John Mirk's Instructions for Parish Priests

Springer

In this book the authors present an HCI principle-

based approach to develop applications to assist children with disabilities. Design knowledge related to developing complex solution for this audience is explained from an interaction design point of view. Different methodologies, models and cases studies are covered with the aim of helping practitioners to adopt any of the proposed techniques presented in this book. HCI methodologies that adopt an agile strategy are presented, including novel

techniques at different development steps, such as: board games, agile planning, agile implementation, method engineering. As this is a huge research field the authors do not just focus on a specific disability but test their methods in different contexts with excellent results. Readers of this book will find both a well-organized and structured set of methodologies and also material that has been tested and refined throughout years of research. Using detailed

case studies the reader is guided towards specific solutions which will also provide insights into how to address related problems.

Homogenization of Differential Operators and Integral Functionals MDPI

The well attended March 1994 Hlse workshop in Amsterdam was a very lively conference which stimulated much discussion and human-human interaction. As the editor of this volume points out, the Amsterdam meeting was just part of a year-long

project that brought many people together from many parts of the world. The value of the effort was not only in generating new ideas, but in making people aware of work that has gone on on many fronts in using computers to make mathematics more understandable. The author was very glad he attended the workshop. * In thinking back over the conference and in reading the papers in this collection, the author feels there are perhaps four major conclusions to be drawn from the current

state of work: 1. graphics is very important, but such features should be made as easy to use as possible; 2. symbolic mathematical computation is very powerful, but the user must be able to see "intermediate steps"; 3. system design has made much progress, but for semester-long coursework and book-length productions we need more tools to help composition and navigation; 4. monolithic systems are perhaps not the best direction for the

future, as different users have different needs and may have to link together many kinds of tools. The editor of this volume and the authors of the papers presented here have also reached and documented similar conclusions.

Butterworth-Heinemann
Medical

Covering the whole range of molecular biology techniques - genetic engineering as well as cytogenetics of plants -, each chapter begins with an introduction to the basic approach. followed by detailed methods with easy-to-follow protocols and comprehensive

troubleshooting. The first part introduces basic molecular methodology such as DNA extraction, blotting, production of libraries and RNA cloning, while the second part describes analytical approaches, in particular RAPD and RFLP. The manual concludes with a variety of gene transfer techniques and both molecular and cytological analysis. As such, this will be of great use to both the first-timer and the experienced scientist. It was mainly during the last two decades that the theory of homogenization or averaging of partial differential equations took shape as a distinct mathe

matical discipline. This theory has a lot of important applications in mechanics of composite and perforated materials, filtration, disperse media, and in many other branches of physics, mechanics and modern technology. There is a vast literature on the subject. The term averaging has been usually associated with the methods of non linear mechanics and ordinary differential equations developed in the works of Poincare, Van Der Pol, Krylov, Bogoliubov, etc.

For a long time, after the works of Maxwell and Rayleigh, homogenization problems for partial differential equations were being mostly considered by specialists in physics and mechanics, and were staying beyond the scope of mathematicians. A great deal of attention was given to the so called disperse media, which, in the simplest case, are two-phase media formed by the main homogeneous material containing small foreign particles (grains,

inclusions). Such two-phase bodies, whose size is considerably larger than that of each separate inclusion, have been discovered to possess stable physical properties (such as heat transfer, electric conductivity, etc.) which differ from those of the constituent phases. For this reason, the word homogenized, or effective, is used in relation to these characteristics. An enormous number of results, approximation formulas, and estimates have been obtained in

connection with such problems as electromagnetic wave scattering on small particles, effective heat transfer in two-phase media, etc.

Springer Science & Business Media
River catchments and reservoirs play a central role in water security, food supply, flood risk management, hydropower generation, and ecosystem services; however, they are now

under increasing pressure from population growth, economic activities, and changing climate means and extremes in many parts of the world.

Adaptive management of river catchments and reservoirs requires an in-depth understanding of the impacts of future uncertainties and thus the development of robust, sustainable solutions to meet the needs of various stakeholders and the environment. To tackle the huge challenges in moving towards adaptive catchment management,

this book presents the latest developments in cutting-edge knowledge, novel methodologies, innovative management strategies, and case studies, focusing on the following themes: reservoir dynamics and impact analysis of dam construction, optimal reservoir operation, climate change impacts on hydrological processes and water management, and integrated catchment management.

This book constitutes the refereed proceedings of the 9th International Workshop on Quality of Service, IWQoS 2001, held in Karlsruhe, Germany, in June 2001. The 24 revised full papers presented together with six short papers and two abstracts of invited contributions were carefully reviewed and selected from a total of close to 150 submissions. The papers are organized in topical sections on provisioning

and pricing, systems QoS, routing, TCP related issues, wireless and mobile networking, aggregation and active networks based QoS, scheduling and dropping, and scheduling and admission control.

Springer

This book constitutes the refereed proceedings of the 11th International Conference on User Modeling, UM 2007, held in Corfu, Greece in July 2007. Coverage includes evaluating user/student modeling techniques, data mining and machine

learning for user modeling, user adaptation and usability, modeling affect and meta-cognition, as well as intelligent information retrieval, information filtering and content personalization.

GWAI ... Springer Science & Business Media

Die erste Fachtagung Künstliche Intelligenz der Gesellschaft für Informatik (wenngleich bereits der fünfte Workshop zu diesem Thema in Deutschland) wurde vom 26. 1. bis 30. 1. 1981 im Physikzentrum in Bad Nauheim abgehalten.

Damit wird nach fast fünfundsiebzigjähriger Verspätung [1] auch bei uns langsam ein Gebiet salonfähig, das zum Schaden der deutschen Informatik bisher vernachlässigt wurde und das in den USA (und anderen Ländern) bereits seit langem unter dem Namen "Artificial Intelligence" zu den Kernfächern der Informatik gehört [2]. Die Tagung wurde geprägt durch den Wechsel von eingeladenen Hauptvorträgen von jeweils einstündiger Dauer mit

anschließender halbstündiger Diskussion und den speziellen Fachvorträgen von jeweils halbstündiger Redezeit. Die Hauptvorträge (HV) geben auch in etwa die Forschungsschwerpunkte wieder, durch die die Künstliche Intelligenz in Deutschland vertreten ist: W. Radig (Hamburg) gibt in seinem HV "Modelle und Strukturen in der Bildverarbeitung" einen Überblick über die Forschung auf dem Gebiet Computersehen. Der Beitrag konzentriert sich dabei besonders auf die

Aspekte, die über das traditionelle "pattern recognition" hinausgehen und steht damit in engem Zusammenhang mit dem zweiten HV: J. Foith (Karlsruhe): "Roboterforschung: Von Spielzeugwelten zur industriellen Anwendung". Dieser Beitrag dürfte besonders für Leser aus der Industrie von Interesse sein. Beide Gebiete demonstrieren besonders anschaulich, mit welchem Tempo der Verlust wissenschaftlicher Konkurrenzfähigkeit zum

Verlust industrieller Wettbewerbsfähigkeit führen kann: die Grundlagenforschung wurde vor ca. 10 Jahren in den USA begonnen [3] und von der deutschen Informatik weitgehend ignoriert. *Adaptive Catchment Management and Reservoir Operation* CRC Press
The 30th Anniversary of the ISCIS (International Symposium on Computer and Information Sciences) series of conferences, started by Professor Erol Gelenbe at Bilkent University, Turkey, in

1986, will be held at Imperial College London on September 22-24, 2015. The preceding two ISCIS conferences were held in Krakow, Poland in 2014, and in Paris, France, in 2013. The Proceedings of ISCIS 2015 published by Springer brings together rigorously reviewed contributions from leading international experts. It explores new areas of research and technological development in computer science, computer engineering, and information technology,

and presents new applications in fast changing fields such as information science, computer science and bioinformatics. The topics covered include (but are not limited to) advances in networking technologies, software defined networks, distributed systems and the cloud, security in the Internet of Things, sensor systems, and machine learning and large data sets.

Clinical Guide to Glaucoma Management
Springer

From the reviews: "These three bulky volumes [EMS 124, 125, 127] [...] provide an introduction to this rapidly developing theory. [...] These books can be warmly recommended to every graduate student who wants to become acquainted with this exciting branch of mathematics. Furthermore, they should be on the bookshelf of every researcher of the area." Acta Scientiarum Mathematicarum
Hydro-Environmental Analysis Springer

This book constitutes the refereed proceedings of the Second International Conference on Formal Methods in Computer-Aided Design, FMCAD '98, held in Palo Alto, California, USA, in November 1998. The 27 revised full papers presented were carefully reviewed and selected from a total of 55 submissions. Also included are four tools papers and four invited contributions. The papers present the state of the art in formal verification methods for digital

circuits and systems, including processors, custom VLSI circuits, microcode, and reactive software. From the methodological point of view, binary decision diagrams, model checking, symbolic reasoning, symbolic simulation, and abstraction methods are covered.

Formal Methods and Software Engineering

Springer Science & Business Media
Cultivators and livestock farmers are increasingly arranging innovative

technical and scientific estimations with the aim to enhance agricultural sustainability, effectiveness, and plant health. Innovative farming technologies incorporate biology with smart technology (computers and sensor devices) exchanging information with one another autonomously in a structured farm management system. This book presents reviews on innovative techniques and methodologies to complement conventional plant control and breeding

attempts toward enhancing crop yield and production. Reviews covered in this volume include: -Active compounds from pomegranate seeds - Application of Enterococci and their bacteriocins for meat biopreservation - Technological advancement in the detection and identification of plant pathogens -Machine learning for precision agriculture -Use of remote sensing technology and geographic information systems for agriculture

and environmental observation The information presented in this volume will provide helpful updates for students, technology experts and professionals in the food security and sustainable agriculture sectors.
Carleson Curves, Muckenhoupt Weights, and Toeplitz Operators
 Springer
 Welcome to the proceedings of the 19th International Workshop on Power and Timing Modeling, Optimization and Simulatio

n,
 PATMOS2009.Overtheyear s,
 PATMOShasevolvedintoani mportantEuropeanevent, whereresearchersfrom both industry and academia discuss and investigate the emerging challenges in future and contemporary applications, design methodologies, and tools required for the development of the upcoming generations of integrated circuits and systems. PATMOS 2009 was organized by TU Delft, The Netherlands, with sp-

sponsorship by the NIRICT Design Lab and Cadence Design Systems, and technical co-sponsorship by the IEEE. Further information about the workshop is available at <http://ens.ewi.tudelft.nl/patmos09>. The technical program of PATMOS 2009 contained state-of-the-art technical contributions, three invited keynotes, and a special session on SystemC-AMS Extensions. The technical program focused on timing, performance, and power consumption, as well as architectural aspects with

particular emphasis on modeling, design, characterization, analysis, and optimization in the nanometer era. The Technical Program Committee, with the assistance of additional expert reviewers, selected the 36 papers presented at PATMOS. The papers were organized into 7 oral sessions (with a total of 26 papers) and 2 poster sessions (with a total of 10 papers). As is customary for the PATMOS workshops, full papers were required for review, and a minimum of

three reviews were received per manuscript.

Operating Systems

Springer Science & Business Media

A practical overview of the diagnosis and treatment of difficult glaucomas. It discusses management of surgical complications and risk management in glaucoma while providing algorithms illustrating the clinical decision making process. The book presents clinical pearls and highlights pitfalls to avoid, features illustrations of complex

surgical procedures, and uses an outline format, bulleted lists, algorithms, and tables for ease of reference.
