Fair Value Measurements John Wiley & Sons

The concept of "fair value" marked a major departure from traditional cost accounting. In theory, under this approach a balance sheet that better reflects the current value of assets and liabilities. Critics of fair value argue that it is less useful over longer time frames and prone to distortion by market inefficiencies resulting in procyclicality in the financial system by exacerbating

market swings. Comprising contributions from a unique mixture of academics, standard setters and practitioners, and edited by internationally recognized experts, this book, on a controversial and intensely debated topic, is a comprehensive reference source which: examines the use of fair value in international financial reporting standards and the US standard SFAS 157 Fair Value Measurement, setting out the case for and against looks at fair value from a number of different theoretical and practical perspectives, including a critical review of the merits and arguments against the use

of fair value accounting explores fair value accounting in practice, involvement in the Great Financial Crisis, implications for managerial reporting discretion, compensation and investment This volume is an indispensable reference that is deserving of a place on the bookshelves of both libraries and all those working in, studying, or researching the areas of international accounting, financial accounting and reporting.

Improvements to IFRSs Wiley

International Accounting Standards (IAS) are a set of standards developed by the International Accounting Standards Board (IASB) to provide a common global framework for financial reporting. These standards are designed to ensure consistency, transparency, and comparability in financial reporting across different countries and industries. IAS cover various aspects of financial reporting, including the presentation of financial statements, recognition and measurement of assets, liabilities, income, and expenses, as well as disclosure requirements. They are used by companies listed on stock exchanges worldwide and are particularly important

for multinational corporations operating in multiple jurisdictions. The goal of harmonizing accounting standards globally is to facilitate cross-border investments, enhance transparency and accountability, and improve the quality and reliability of financial information for investors, creditors, and other stakeholders. IAS cover various aspects of financial reporting, including: Presentation of Financial Statements (IAS 1): This standard outlines the overall structure and content of financial statements, including the requirements for balance sheets, income statements, cash flow statements, and statements of changes in equity. Recognition and Measurement of Assets, Liabilities, Income, and Expenses: Several IAS address the recognition, measurement, and presentation of specific types of assets, liabilities, income, and expenses. For example, IAS 16 covers property, plant, and equipment, while IAS 38 deals with intangible assets. Disclosure Requirements: IAS include requirements for disclosing certain information in financial statements to provide users with a better understanding of an entity's financial position, performance, and cash

flows. Disclosure requirements cover areas such as accounting policies, significant accounting estimates, related party transactions, and contingencies. Consolidated Financial Statements (IAS 27 and IAS 28): These standards provide guidance on the preparation of consolidated financial statements when an entity controls one or more other entities or has significant influence over them. Financial Instruments (IAS 32, IAS 39, and IFRS 9): These standards address the recognition, measurement, and presentation of various types of financial instruments, including financial assets, financial liabilities, and derivatives. The adoption of International Accounting Standards, particularly International Financial Reporting Standards (IFRS), has become increasingly widespread globally. Many countries require or permit the use of IAS/IFRS for financial reporting by publicly traded companies, while others use them as a basis for developing their national accounting standards. Overall, the aim of International Accounting Standards is to enhance the quality, comparability, and transparency of financial reporting, thereby facilitating

investment decisions, reducing information asymmetry, and promoting economic growth and stability on a global scale.

The aim is to visualise the workflows as the basis for creating support software which can make a key contribution to cost-effective conversion.
