This comparative study of the European history of apprenticeship offers a comprehensive picture of occupational training before the Industrial Revolution.

Education and the Law Policy Press

This book contains the key-note lectures and a selection of papers that were presented at the 15th Conference of the European Association for Research in Industrial Economics (EARIE) held under the auspices of GRASP at Erasmus University Rotterdam in 1988, plus an introductory chapter by the Editors.

Upon suggestions by the Editors, all papers have been revised for this book, some more extensively than others.

Robin Marris has added to his lecture a synopsis of the contributions to the Round Table on the Micro-Macro Interface which he chaired during the Conference. The papers cover issues that seem to be both interesting and relevant for the 1990s. While some of the papers are cast in a rather established research frame -enabling the use of regular academic routines - others are first attempts at delineating the contours of areas that are peripheral to what is often considered as the core of Industrial Organization. In their introductory chapter, the Editors set

forth that a neglect of those areas may well relegate Industrial Organization to social irrelevancy. Therefore, it is hoped that the book will also contribute to a reflection on the main lines of Industrial Organization research for the 1990s - thus helping to create a healthy perspective for this part of economics at a time when macroeconomics is undergoing a severe crisis.

His developers had also hidden all the shortcuts in human evolution into the game. In order to obtain the so-called "Life Code", a group of strong men were running amok, they were willing to do anything they could to get their hands on. National forces and large financial groups were all in place to engage in fierce battles, and the fate of the human race had changed because of this game. Ye Wei, a college student who had just graduated, would he be able to carve out a path of blood for himself?

John Dewey's *Democracy and Education* addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, *Democracy and Education* is regarded as the seminal work on public education by one of the most important scholars of the century.

The third in a series of Cedefop

publications dealing with technical aspects of the European Qualification Framework and European Credit Transfer System, this book analyses current practice in countries that have made progress with evaluating and defining competence. It proposes a typology of knowledge, skills and competence, to be used not as an instrument of 'harmonisation' between countries, but as a template to enable comparison. The aim is to promote mobility in every sense, bringing work-based learning and knowledge acquired in higher education closer together.

This book explores the profession of independent advocacy through a history of the practice, and provides an empirical study of its emergence in London. While advocacy has long been associated with professions such as social work and mental health nursing, this book delivers a unique perspective of advocacy through the lens of faith and culture. Using real life examples and insights from service users, advocates and spiritual care practitioners in the advocacy and chaplaincy sectors, the fascinating results offer proposals for enhanced theory, training and practice in independent advocacy. It will be of great interest for students and professionals engaged in advocacy or spiritual care.

The origin of guilds has been the subject of a great deal of discussion, and two opposing theories have been advanced. According to the first theory they were the persistence of earlier institutions; but what were these institutions? Some say that, more particularly in the south of France, they were of Roman and Byzantine origin, and were derived from those collegia of the poorer classes (tenuiorum) which, in the last centuries of the Empire, chiefly concerned themselves with the provision of funerals; or, again, from the scholae, official and compulsory groups, which, keeping the name of the hall in which their councils assembled, prolonged their existence till about the year 1000.

Global Application of Prescribed Fire provides a first-hand perspective of the various methods and ways people around the world view and use prescribed fire. It covers the logistics, constraints and social dynamics surrounding the intentional use and application of fire by humans, and demonstrates how, why, when and where prescribed fire is used in different

regions. Written by international experts, the book has four key objectives: explore new techniques, ideas and thoughts on how to apply prescribed fire from a global perspective; provide regional case studies covering issues that may constrain or enhance prescribed fire projects; stimulate cross-cultural conversations about how fires function in ecosystems; and relate prescribed fire to wildfire regimes with implications for

protecting life and property, as well as sustaining local fire cultures and unique fire-dependent flora and fauna. Global Application of Prescribed Fire enhances our understanding and knowledge about the application of prescribed fire. This comprehensive book will provide fire practitioners, researchers, agencies and policymakers with key ecological and managerial insight of how prescribed fires are conducted around the globe.
