The last thing Natalia Kristoff expected was that her friend's wild dream to find her a fake husband for a Green Card would have any sort of success. Yet here she is, sitting in a private booth, listening to the sexiest man she's ever seen lay out the details of just what he needs from her. IN return, he's going to sign the papers that stand between her and her dream job. She can't believe what she's hearing. Stand at his side, pretend she's madly in love with him, all to satisfy some crazy family tradition? That's a deal she can live with. Kirell Urso has a problem. A big one. His bear shifter family is in shambles, struck from within by traitors. With no one in charge of security, the head of his House has nominated him for the job. The only problem? Tradition dictates that anyone in power must have a mate. If he's going to pull off this scheme, he must find a mate in the next 72hrs. Someone. Anyone. All they have to do is pretend to love him for a few days. Things get off to a rocky start between the two when their first date is interrupted by Kirell's enemies. As he slowly exposes Natalia to the truth, she's forced to come to grips with the existence of another world, one she never thought existed. Shifters of all sorts collide as Kirell's enemies work to expose his fraud, but the harder they try, the more Natalia finds she wants to be by his side. Can a relationship built on a handshake business agreement turn into something real, even in the face of a threat to Natalia's very life?

 This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as "a good book on rocket stuff...that's

a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

Power quality is simply the interaction of electrical power with electrical equipment. If electrical equipment operates correctly and reliably without being damaged or stressed, we would say

that the electrical power is of good quality. On the other hand, if the electrical equipment malfunctions, is unreliable, or is damaged during normal usage, we would suspect that the power quality is poor. As a general statement, any deviation from normal of a voltage source (either DC or AC) can be classified as a power quality issue. Power quality issues can be very high-speed events such as voltage impulses / transients, high frequency noise, wave shape faults, voltage swells and sags and total power loss. Each type of electrical equipment will be affected differently by power quality issues. By analyzing the electrical power and evaluating the equipment or load, we can determine if a power quality problem exists. Rolling brownouts, voltage sags, spikes, electrical noise and harmonic distortion are some common quality problems. Power Quality Monitoring, Analysis and Enhancement cover various aspects of power quality monitoring, analysis and power quality enhancement in transmission and distribution systems. The monitoring of electric power helps to identify the important power quality problems such as voltage sags and swells, interruptions, harmonics, and highfrequency noise, consistently seen in industrial and commercial grid applications. Troubleshooting these problems requires accurate measurements and analysis of power quality with monitoring instruments that can effectively locate issues and identify solutions. This book will be of great benefit to professionals, engineers and researchers.

It started as a very small fire in rugged country but within two hours after landing, thirteen of these young men were caught in a raging inferno and were killed. They died bravely, together with their friends, and in the service of their country. Everyone was young and attractive, healthy and strong, enthusiastic and in love. They were bursting into the prime of their lives. There were no malcontents here. Everyone did their best but events overtook them. Until now the actual time line has never been connected to the people involved. Fire in Montana connects the lives of young smokejumpers who lived with a joy of life and expectations of shining futures, the forest rangers and volunteers who fought valiantly to rescue them, and their families, lovers, and friends who were forced to wait and pray, then face the devastating and heart wrenching loss.

Australia's military consistently punches above its weight, and its approach to leadership is the key to its success. Developed over a century ago by fusing national values with battlefield imperatives, its approach has been fine-tuned over generations. It is now an adaptable and egalitarian leadership culture that ticks all the boxes for best practice. The military assumes no-one is born a natural leader, and that good training makes good leaders. Drawing on his own long military career and defence training programs, and on research, Nick Jans has identified the core principles of this consistently successful approach to leadership. These '3Rs' are the leadership skills which generate loyalty and commitment at an operational level, and they are just as successful in everyday team management as they are in the field. **Leadership Secrets of the Australian Army** includes real stories from the field and from workplaces, from everyday employees and from well-known leaders. It shows how you too can become a leader your team can believe in, and-equally importantly-how you can help them believe in themselves. 'Read it and be wise.'
