In this section we want to go over some of the basic ideas about functions of more than one variable. First, remember that graphs of functions of two variables, $(z = f(\text{left} \{x,y\} \text{right}))$ are surfaces in three dimensional space. For example, here is the graph of $(z = 2\{x^2\} + 2\{y^2\} - 4)$.Calculus III - Functions of Several VariablesMultivariable calculus can be applied to analyze deterministic systems that have multiple degrees of freedom.
