A MAN WITHOUT AMBITION is Dr Arnold Mol's autobiography written with the purpose of giving his grandchildren some insight into part of their historical heritage. Even though his family and friends were surprised by the title, Dr Mol says that his life has been characterized by responding to opportunities that have come his way, rather than purposefully planning to achieve something. A MAN WITHOUT AMBITION begins with Dr Mol recounting the drama surrounding his birth in Holland shortly before the end of the Second World War. He then reflects on the past 68

blessed years of his life – about immigrating to South Africa, growing up, the love of his life, his first job, his missionary calling to South America, becoming a parent and his deep gratitude towards the Lord. A MAN WITHOUT AMBITION makes for rather entertaining reading with many anecdotes, and readers will see how blessed life can be when they trust God and put their faith in Him alone.

In his gripping and provocative debut, anthropologist Jason De León sheds light on one of the most pressing political issues of our time—the human

consequences of US immigration policy. The Land of Open Graves reveals the suffering and deaths that occur daily in the Sonoran Desert of Arizona as thousands of undocumented migrants attempt to cross the border from Mexico into the United States. Drawing on the four major fields of anthropology, De León uses an innovative combination of ethnography, archaeology, linguistics, and forensic science to produce a scathing critique of “Prevention through Deterrence,” the federal border enforcement policy that encourages migrants to cross in areas characterized by extreme environmental conditions and high risk of death. For two decades, this policy has failed to deter border crossers while successfully turning the rugged terrain of southern Arizona into a killing field. In harrowing detail, De León chronicles the journeys of people who have made dozens of attempts to cross the border and uncovers the stories of the objects and bodies left behind in the desert. The Land of Open Graves will spark debate and controversy.

*Annual Index* Simon and Schuster  
 It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States—which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean—it details what went wrong on that day (such as

intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the

perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to

further reading and websites. The website can be accessed at:

Are current testing practices consistent with the goals of the reform movement in school mathematics? If not, what are the alternatives? How can authentic performance in mathematics be assessed? These and similar questions about tests and their uses have forced those advocating change to examine the way in which mathematical performance data is gathered and used in American schools. This book provides recent views on the issues surrounding mathematics tests, such as the need for valid performance data, the implications of the Curriculum and Evaluation Standards for School Mathematics for test development, the identification of valid items and tests in terms of the Standards, the procedures

now being used to construct a sample of state assessment tests, gender differences in test taking, and methods of reporting student achievement.

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the

commission of the actual terrorist incidents. Illustrations.

In her book *Teaching to Diversity*, Dr. Jennifer Katz synthesizes the research, and 16 years experience of teaching in inclusive classrooms and schools, to provide answers to several questions: How do I make inclusion work for ALL students? What are the foundational best practices of a truly inclusive learning community? How does one create such a community? The author pulls together, in an organized way, a three-block model of universal design for learning (UDL) and suggests a step-by-step approach for implementing it. This framework includes: Block One, Social and Emotional Learning: details ways to build compassionate learning communities (K-12) in which all students feel safe and valued, and develop a positive self-concept, sense of belonging, and respect for diverse others. Block Two, Inclusive Instructional Practice: includes a framework for planning units from K-12, and explains instructional and management practices for teaching, assessing, grading, and reporting in UDL Classrooms. Block Three, Systems and

Structures: suggests strategies for creating inclusive learning communities, and explores ways in which resource teachers, student services personnel, and school administrators can support and create socially and academically inclusive schools and classrooms. The three-block model of UDL can empower educators with the knowledge, skills, and confidence required to teach diverse learners in the same classroom--including those who have previously been excluded. Ultimately, it is about creating classrooms and schools that heal by teaching to the heart, mind, and spirit of every student.
