Psychiatry of Pandemics Boydell & Brewer

This study of the Black Death considers the nature of the disease, its origin, spread, mortality and its impact on history.

The Black Death Anchor

Between 1347 and 1350, the Black Death killed at least one third of Europe's population. Philip Ziegler's classic account traces the course of the virulent epidemic through Europe and its dramatic effect on the lives of those whom it afflicted. First published nearly forty years ago, it

remains definitive. 'The clarity and restraint on every page produce a most potent cumulative effect.' Michael Foot
Black Death at the Golden Gate: The Race to Save America from the Bubonic Plague Oxford University Press
Plague in the Early Modern World presents a broad range of primary source materials from Europe, the Middle East, North Africa, China, India, and North America that explore the nature and impact of plague and disease in the early modern world. During the early modern period frequent and recurring outbreaks of plague and other epidemics around the world helped to define local identities and they simultaneously forged and subverted social structures, recalibrated

demographic patterns, dictated political agendas, and drew upon and tested religious and scientific worldviews. By gathering texts from diverse and often obscure publications and from areas of the globe not commonly studied, *Plague in the Early Modern World* provides new information and a unique platform for exploring early modern world history from local and global perspectives and examining how early modern people understood and responded to plague at times of distress and normalcy. Including source materials such as memoirs and autobiographies, letters, histories, and literature, as well as demographic statistics, legislation, medical treatises and popular remedies, religious writings,

material culture, and the visual arts, the volume will be of great use to students and general readers interested in early modern history and the history of disease. **Plague Town** National Academies Press Governments, businesses, and individuals around the world are thinking about what happens after the COVID-19 pandemic. Can we hope to not only ward off another COVID-like disaster but also eliminate all respiratory diseases, including the flu? Bill Gates, one of our greatest and most effective thinkers and activists, believes the answer is yes. The author of the #1 New York Times best seller *How to Avoid a Climate Disaster* lays out clearly and convincingly what the world should have learned from COVID-19 and what all of us can do to ward off another catastrophe like it. Relying on the shared knowledge of the world's foremost experts and on his own experience of combating fatal diseases through the Gates Foundation, Gates first helps us understand the science of infectious diseases. Then he shows us how the nations of the world, working in conjunction with one another and with the private sector, how we can prevent a new pandemic from killing millions of people and devastating the global economy. Here is a clarion call—strong, comprehensive, and of the gravest importance.

Epidemics and Society Faber & Faber Like sharks, epidemic diseases always lurk just beneath the surface. This fast-paced history of their effect on mankind prompts questions about the limits of scientific knowledge, the dangers of medical hubris, and how we should prepare as epidemics become ever more frequent. Ever since the 1918 Spanish influenza pandemic, scientists have dreamed of preventing catastrophic outbreaks of infectious disease. Yet, despite a century of medical progress, viral and bacterial disasters continue to take us by surprise, inciting panic and dominating news cycles. From the Spanish flu and the 1924 outbreak of pneumonic plague in Los Angeles to the 1930 'parrot fever' pandemic and the more recent SARS, Ebola, and Zika epidemics, the last 100 years have been marked by a succession of unanticipated pandemic alarms. Like man-eating sharks, predatory pathogens are always present in nature, waiting to strike; when one is seemingly vanquished, others appear in its place. These pandemics remind us of the limits of scientific knowledge, as well as the role that human behaviour and technologies play in the emergence and spread of microbial diseases.

Pandemic Disease in the Medieval World Spectra

La moria grandissima began its terrible journey across the European and Asian continents in 1347, leaving unimaginable devastation in its wake. Five years later, twenty-five million people were dead, felled by the scourge that would come to be called the Black Death. The Great Mortality is the extraordinary epic account of the worst natural disaster in European history -- a drama of courage, cowardice, misery, madness, and sacrifice that brilliantly illuminates humankind's darkest days when an old world ended and a new world was born.

The Black Death Yale University Press A "marvelous history"* of medieval Europe, from the bubonic plague and the Papal Schism to the Hundred Years' War, by the Pulitzer Prize-winning author of *The Guns of August* *Lawrence Wright, author of *The End of October*, in *The Wall Street Journal* The fourteenth century reflects two contradictory images: on the one hand, a glittering age of crusades, cathedrals, and chivalry; on the other, a world plunged into chaos and spiritual agony. In this revelatory work, Barbara W. Tuchman examines not only the great rhythms of history but the grain and texture of domestic life: what childhood was like; what marriage meant; how money, taxes, and war dominated the lives of serf, noble, and clergy alike. Granting her subjects their loyalties, treacheries, and guilty passions, Tuchman re-creates the lives of proud cardinals, university scholars, grocers and clerks, saints and mystics, lawyers and mercenaries, and, dominating all, the knight—in all his valor and "furious follies," a "terrible worm in an iron cocoon." Praise for *A Distant Mirror* "Beautifully written, careful and thorough in its scholarship . . . What Ms. Tuchman does superbly is to tell how it was. . . . No one has ever done this better."—*The New York Review of Books* "A beautiful, extraordinary book . . . Tuchman at the top of her powers . . . She has done nothing finer."—*The Wall Street Journal* "Wise, witty, and wonderful . . . a great book, in a great historical tradition."—*Commentary* **Plagues, Pandemics and Viruses** ARC Humanities Press

The Black Death was the fourteenth century's equivalent of a nuclear war. It wiped out one-third of Europe's population, taking millions of lives. The author draws together the most recent scientific discoveries and historical research to pierce the mist and tell the story of the Black Death as a gripping, intimate narrative.

From the acclaimed author of *Miracle Cure* and *The Third Horseman*, the epic story of the collision between one of nature's smallest organisms and history's mightiest empire During the golden age of the Roman Empire, Emperor Justinian reigned over a territory that stretched from Italy to North Africa. It was the zenith of his achievements and the last of them. In 542 AD, the bubonic plague struck. In weeks, the glorious classical world of Justinian had been plunged into the medieval and modern Europe was born. At its height, five thousand people died every day in Constantinople. Cities were completely depopulated. It was the first pandemic the world had ever known and it left its indelible mark: when the plague finally ended, more than 25 million people were dead. Weaving together history, microbiology, ecology, jurisprudence, theology, and epidemiology, Justinian's Flea is a unique and sweeping account of the little known event that changed the course of a continent.

An eye-opening anthology from the bestselling editor of *Histories of Nations*, exploring how people around the globe have suffered and survived during plague and pandemic, from the ancient world to the present. Plague, pestilence, and pandemics have been a part of the human story from the beginning and have been reflected in art and writing at every turn. Humankind has always struggled with illness; and the experiences of different cities and countries have been compared and connected for thousands of years. Many great authors have published their eyewitness accounts and survivor stories of the great contagions of the past. When the great Muslim traveler Ibn Battuta visited Damascus in 1348 during the great plague, which went on to kill half of the population, he wrote about everything he saw. He reported, "God lightened their affliction; for the number of deaths in a single day at Damascus did not attain 2,000, while in Cairo it reached the figure of 24,000 a day." From the plagues of ancient Egypt recorded in Genesis to those

like the Black Death that ravaged Europe in the Middle Ages, and from the Spanish flu of 1918 to the Covid-19 pandemic in our own century, this anthology contains fascinating accounts. Editor Peter Furtado places the human experience at the center of these stories, understanding that the way people have responded to disease crises over the centuries holds up a mirror to our own actions and experiences. *Plague, Pestilence and Pandemic* includes writing from around the world and highlights the shared emotional responses to pandemics: from rage, despair, dark humor, and heartbreak, to finally, hope that it may all be over. By connecting these moments in history, this book places our own reactions to the Covid-19 pandemic within the longer human story. [Plague Ports](#) Cambridge University Press

The Black Death of the late Middle Ages is often described as the greatest natural disaster in the history of humankind. More than fifty million people, half of Europe's population, died during the first outbreak alone from 1347 to 1353. Plague then returned fifteen more times through to the end of the medieval period in 1500, posing the greatest challenge to physicians ever recorded in the history of the medical profession. This engrossing book provides the only comprehensive history of the medical response to the Black Death over time. Leading historian John Aberth has translated many unknown plague treatises from nine different languages that vividly illustrate the human dimensions of the horrific scourge. He includes doctors' remarkable personal anecdotes, showing how their battles to combat the disease (which often afflicted them personally) and the scale and scope of the plague led many to question ancient authorities. Dispelling many myths and misconceptions about medicine during the Middle Ages, Aberth shows that plague doctors formulated a unique and far-reaching response as they began to treat plague as a poison, a conception that had far-reaching implications, both in terms of medical treatment and social and cultural responses to the disease in society as a whole.

The strongest weapon against pandemic is the truth. Read why in the definitive account of the 1918 Flu Epidemic.

Magisterial in its breadth of perspective and depth of research, *The Great Influenza* provides us with a precise and sobering model as we confront the epidemics looming on our own horizon. As Barry concludes, "The final lesson of 1918, a simple one yet one most difficult to execute, is that...those in authority must retain the public's trust. The way to do that is to distort nothing, to put the best face on nothing, to try to manipulate no one. Lincoln said that first, and best. A leader must make whatever horror exists concrete. Only then will people be able to break it apart." At the height of World War I, history's most lethal influenza virus erupted in an army camp in Kansas, moved east with American troops, then exploded, killing as many as 100 million people worldwide. It killed more people in twenty-four months than AIDS killed in twenty-four years, more in a year than the Black Death killed in a century. But this was not the Middle Ages, and 1918 marked the first collision of science and epidemic disease.

From the conquest of Mexico by smallpox as much as by the Spanish, to the bubonic plague in China, to the typhoid epidemic in Europe, *Plagues and Peoples* is "a brilliantly conceptualized and challenging achievement" (Kirkus Reviews). Upon its original publication, *Plagues and Peoples* was an immediate critical and popular success, offering a radically new interpretation of world history. With the identification of AIDS in the early 1980s, another chapter was added to this chronicle of events, which William McNeill explores in his introduction to this edition. Thought-provoking, well-researched, and compulsively readable, *Plagues and*

Peoples is essential reading—that rare book that is as fascinating as it is scholarly, as intriguing as it is enlightening.

Completely revised and updated for this new edition, Benedictow's acclaimed study remains the definitive account of the Black Death and its impact on history. The first edition of *The Black Death* collected and analysed the many local studies on the disease published in a variety of languages and examined a range of scholarly papers. The medical and epidemiological characteristics of the disease, its geographical origin, its spread across Asia Minor, the Middle East, North Africa and Europe, and the mortality in the countries and regions for which there are satisfactory studies, are clearly presented and thoroughly discussed. The pattern, pace and seasonality of spread revealed through close scrutiny of these studies exactly reflect current medical work and standard studies on the epidemiology of bubonic plague. Benedictow's findings made it clear that the true mortality rate was far higher than had been previously thought. In the light of those findings, the discussion in the last part of the book showing the Black Death as a turning point in history takes on a new significance. OLE J. BENEDICTOW is Professor of History at the University of Oslo.

With the same unique vision that brought his now classic Mars trilogy to vivid life, bestselling author Kim Stanley Robinson boldly imagines an alternate history of the last seven hundred years. In his grandest work yet, the acclaimed storyteller constructs a world vastly different from the one we know. . . . "A thoughtful, magisterial alternate history from one of science fiction's most important writers."—The New York Times Book Review It is the fourteenth century and one of the most apocalyptic events in human history is set to occur—the coming of the Black Death. History teaches us that a third of Europe's population was destroyed. But what if the plague had killed 99 percent of the population instead? How would the world have changed? This is a look at the history that could have been—one that stretches across centuries, sees dynasties and nations rise and crumble, and spans horrible famine and magnificent innovation. Through the eyes of soldiers and kings, explorers and philosophers, slaves and scholars, Robinson navigates a

world where Buddhism and Islam are the most influential and practiced religions, while Christianity is merely a historical footnote. Probing the most profound questions as only he can, Robinson shines his extraordinary light on the place of religion, culture, power—and even love—in this bold New World. “Exceptional and engrossing.”—New York Post “Ambitious . . . ingenious.”—Newsday

“A mash-up of Erik Larson and Richard Preston.” —Tina Jordan, New York Times Book Review podcast On March 6, 1900,

the bubonic plague took its first victim on American soil: Chinese immigrant Wong Chut King. Empowered by racist pseudoscience, officials rushed to quarantine Chinatown—but when corrupt politicians mounted a cover-up to obscure the threat, it fell to federal health officer Rupert Blue to save San Francisco, and the nation, from a gruesome fate. Black Death at the Golden Gate is a spine-chilling saga of virulent racism, human folly, and the ultimate triumph of scientific progress.
