Math 371: Elementary Probability Theory (Summer 2011)  $P(B|A) = \frac{P(A|B)P(B)}{P(A)}$  Thus, the probability of B given A is the probability of A given B, times the probability of B divided by the probability of A. This formula is not appropriate if  $P(A)=0$ , that is if A is an event which cannot happen. An example of the use of Bayes' theorem is given below.
