Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level – the green line. In order to consider and value underground space usage together with

human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and

for academics who are interested in underground constructions and geotechnics.

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art Submission Tobias is a skilled Dom and Noah is a man in need of just that. He wants to sub badly, but has yet to find someone he believes in. Through a series of encounters in the world of bondage and discipline, we learn why Noah has trouble trusting, and why Tobias is reluctant to let himself love. Still, Tobias can't resist Noah's charms, and the two of them set about making a scene for themselves, one that works for them and their unique set of problems. But can they stay together in a world where learning to love means accepting all of their dark secrets?!Code of Federal RegulationsSpecial edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.Federal RegisterCode of Federal Regulations, Title 48, Federal Acquisition Regulations System, Chapter 7-14, Revised as of October 1, 2009

This Green Book provides those involved in transformer procurement with comprehensive guidance on industry best practice to avoid wrong decisions. Transformers are one of the expensive components in the power system, and also contribute a large proportion of the losses. Transformers also have long lives - more than 40 years in many cases. Making the wrong decisions during the procurement process can have serious and long-lasting consequences.

Scripture is the foundation for all of Christian life and ministry, but in our current age it is being challenged, doubted, and, in many cases, simply ignored. Wayne Grudem, one of evangelicalism's best-known theologians and authors, has worked tirelessly throughout his life to demonstrate the necessity, sufficiency, and centrality of Scripture. In his honor, Grudem's friends and colleagues, including John Piper, Thomas R. Schreiner, Sam Storms, Vern S. Poythress, John M. Frame, Gregg R. Allison, Erik Thoennes, and John DelHousaye, have compiled a series of essays on various topics central to Grudem's life and teaching. Exploring topics such as the nature of Scripture, the relationship between Scripture and doctrine, and the role of Scripture in life and ministry, this volume stands as a testimony to the enduring worth of God's Word.

This book constitutes the refereed proceedings of the 6th IFIP WG 11.11 International Conference, IFIPTM 2012, held in Surat, India, in May 2012. The 12 revised full papers presented together with 8 short papers and the abstracts of 4 keynote talks were carefully reviewed and selected from 51 submissions. Building on the traditions inherited from the iTrust and previous IFIPTM conferences, IFIPTM 2012 is a multi-disciplinary conference focusing on areas such as: trust models, social, economic and behavioural aspects of trust, trust in networks, mobile systems and cloud computation, privacy, reputation systems, and identity management.

"This chapter introduces our holistic view of knowledge production in sociology and political science. Enlarging our view beyond the individualistic publication pipeline metaphor, we press the conception of academics as citizens of a knowledge polity with rights and responsibilities. Knowledge production does not just mean research, but encompasses teaching, reviewing, blogging, commenting, and other activities, which signal its communal nature. We then advance an explanation for knowledge production that situates academics in institutional and social contexts - including the family - while maintaining individual agency. We search for inequalities by gender and racial/ethnic identification, but are careful to consider the changing compositions of political science and sociology (both are diversifying steadily) and different situations (e.g., faculty rank) when making comparisons. The chapter describes our PASS study, which sampled academic departments and surveyed 1,700 faculty in 2017. Respondent reports were linked with data on lifetime publications, Twitter activity and other data"--
