 The current, thoroughly revised and updated edition of this approved title, evaluates information sources in the field of technology. It provides the reader not only with information of primary and secondary sources, but also analyses the details of information from all the important technical fields, including environmental technology, biotechnology, aviation and defence, nanotechnology, industrial design, material science, security and health care in the workplace, as well as aspects of the fields of chemistry, electro technology and mechanical engineering. The sources of information presented also contain publications available in printed and electronic form, such as books, journals, electronic magazines, technical reports, dissertations, scientific reports, articles from conferences, meetings and symposiums, patents and patent information, technical standards, products, electronic full text services, abstract and indexing services, bibliographies, reviews, internet sources, reference works and publications of professional associations. Information Sources in Engineering is aimed at librarians and information scientists in technical fields as well as non-professional information specialists, who have to provide information about technical issues. Furthermore, this title is of great value to students and people with technical professions.

This new edition of A Dictionary of Construction, Surveying, and Civil Engineering is the most up-to-date dictionary of its kind. In more than 8,000 entries it covers the key areas of civil and construction engineering, construction technology and practice, construction management techniques and processes, as well as legal aspects such as contracts and procurement. It has been updated with more than 600 new entries spanning subjects such as sustainability, new technologies, disaster management, and building software. New additions include terms such as Air source heat pump, hydraulic failure, mechanical ventilation with heat recovery, off-site construction, predictive performance, sustainable development, and value

engineering. Useful diagrams and web links complement the text, which also includes suggestions for further reading. With contributions from more than 130 experts from around the world, this dictionary is an authoritative resource for engineering students, construction professionals, and surveyors.

The papers collected in this volume are a selection of papers presented at a conference on Language and Translation (Irbid, Jordan, 1992). In their revised form, they offer comparisons between Western and Arabic language usage and transfer. The articles bring together linguistic and cultural aspects in translation in a functional discourse framework set out in Part One: Theory, Culture, Ideology. Part Two addresses aspects for comparisons among translations and their cultural contexts (equivalence, stylistics and paragraphing). Part Three features Arabic-English language contact, specifically in technical writing, the media and academia. Part Four deals with problems in lexicography and grammar: terminology, verb-particle combinations and semantic diversity of radical-doubling forms and includes a proposal for a new approach to English/Arabic dictionaries. Part Five turns to issues of interest to language teachers with practical proposals and demonstrations. Part Six deals with geopolitical factors linking the West and Middle East, focusing on equality in communication and exchange of information.

Part of a three-volume cycle, this book presents a selection of key resources - accessible via the web and in print. Resources within the 12 groupings are divided between 100 generally recognizable subject fields, and then allocated to one of 13 standard resource categories. It is intended for LIS professionals, research workers and students.

In the last few decades civil engineering has undergone substantial technological change which has, naturally, been reflected in the terminology employed in the industry. Efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general, and that of civil engineering in particular. The publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field, as well as by the lack of suitable updated bilingual dictionaries. This Dictionary contains some 14,000 English terms together with their German, French, Dutch and Russian equivalents, which are used in the main branches of civil engineering and relate to the basic principles of structural design and calculations (the elasticity theory, strength of materials, soil mechanics and other allied technical disciplines); to buildings and installations, structures and their parts, building materials and prefabrications, civil engineering technology and practice, building and road construction machines, construction site equipment, housing equipment and fittings (including modern systems of air conditioning); as well as to hydrotechnical and irrigation constructions. The Dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning, as well as airfield, railway and underground construction. The Dictionary does not list trade names of building materials, parts and machines or the names of chemical compounds. Nor does it give adverbial, adjective or verbal terms.

A practical guide to translation as a profession, this book provides everything translators need to know, from digital equipment to translation techniques, dictionaries in over seventy languages, and sources of translation work. It is the premier sourcebook for all linguists, used by both

beginners and veterans, and its predecessor, *The Translator's Handbook*, has been praised by some of the world's leading translators, such as Gregory Rabassa and Marina Orellana."

Much of the insight in the field of Arabic linguistics has for a long time remained unknown to linguists outside the field. Regrettably, Arabic data rarely feature in the formulation of theories and analytical tools in modern linguistics. This situation is unfavourable to both sides. The Arabist, once an outsider, has almost become a non-member of the mainstream linguistics community. Consequently, linguistics itself has been deprived of a wealth of data from one of the world's major languages. However, it is reassuring to witness advances being made to integrate into mainstream linguistics the visions and debates of specialists in Arabic. Building on this fruitful endeavour, this book presents thought-provoking, new articles, especially written for this collection by leading scholars from both sides. The authors discuss topics in historical, social and spatial dialectology focusing on Arabic data investigated within modern analytical frameworks.

Lexical research plays a central role in present-day linguistics. Thanks to its ability to combine the traditional humanistic approach with state-of-the-art linguistic theory, it quickly responds to the demands of a constantly changing society, which requires scholars to provide answers to challenges in the field of translation, language teaching and language use. Furthermore, while still dealing with areas like legal language or dictionaries, the parameters of research have expanded to include previously unforeseeable fields, such as video game terminology, code mixing in pop music or the translation of erotic literature. This book shows how researchers are currently responding to these challenges, with a collection of essays representing various aspects of lexicography, combining cutting-edge research with a user-friendly approach. Divided into four major sections (Lexical Theory and Acquisition; Legal Terminology; Dictionaries; and New Challenges), it proves that lexicology, lexicography and terminology are very much at the forefront of current research trends.
