Knowing about RC cars is very essential before stepping into the racing world. If you are still an amateur, you might crib on the fact that you aren't able to choose the best electric powered RC car. You need an assistance to choose the best suitable car to pose against your rivals and this isn't easy as it might sound. Electric RC cars are the ones which run on batteries. The electric batteries are in the form of battery packs. You have a choice while choosing the battery. The 'ready to run' or the batteries which you need to build it yourself are available. The 'ready to run' batteries are preferred as the work load becomes very minimal. Nitro RC cars are the ones which are tougher to maintain and they are quite expensive. RC cars that run on battery packs are easier to purchase. It is specifically designed for amateurs or beginners. However, RC car fanatics who are quite experienced use these cars for variety and comparison purposes. RC electric cars are user-friendly and they are available cheap in the market. This is their main advantage. The difference between the prices of a gasoline powered RC car and an electric RC car goes up to a hundred dollars.

This volume is intended to expand the dialogue and interest among both practitioners and academicians in a problem area worthy of attention by all. The concept of disaggregation admits to our current inability to solve many types of interrelated hierarchical problems simultaneously. It offers instead a sequential, iterative process as a workable and necessary procedure. The papers in this volume are selected from those presented at a Disaggregation Conference held in March, 1977 at The Ohio State University. We heartily applaud all those who participated in the conference and particularly appreciate the

cooperation of those authors whose work is published in this collection. Part A contains four papers which define the various dimensions of disaggregation. The paper by Martin Starr, which was the text of his luncheon address at the conference, provides several interesting perspectives to the problem. Although disaggregation suggests tearing apart, as Professor Starr illustrates with his butterfly example, it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies. The next paper by Lee Krajewski and Larry Ritzman offers a general model of disaggregation for both the manufacturing and service sectors. After reading the papers in this section, as well as the papers in subsequent sections, you will identify other dimensions to hierarchical decision making which go beyond this generalized model.
