I originally developed this book for my networking students at the community college where I teach and it is at their urging I have decided to publish this book. Since then, thousands of copies have gone out and the book has been adopted at several other colleges and schools. My goal was to produce a book that was targeted to a single topic (IPv4 subnetting) that was inexpensive, and was easy to read (less than 100 pages). I also wrote the book to be used from time to time; not relegated to a shelf where it would gather dust. My students have loved the book over the years and I know you will too.

101 Labs - Book Series Experts agree that we retain only 10% of what we read but 90% of what we do. Perhaps this explains why the global pass rate for most IT exams is a ghastly 40%. This is where the 101 Labs book series can help. We are revolutionizing how IT people train for their exams and the real world with our Learn - By - Doing teaching method. 101 Labs' mission is to turn you into an IT expert by doing instead of reading. Using free software and free trials, our experts take you by the hand and walk you through every aspect of the protocols and technologies you will encounter in your IT career. We share our configuration tips and tricks with you as well as how to avoid the common mistakes many novice engineers make, which can quickly become career-ending. 101 Labs - IP Subnetting Subnetting is one of the toughest subjects for IT students and engineers to understand. You have to master binary math, hexadecimal numbering systems and address classes. You must determine which IP address is in which subnet and which subnet mask will provide you with the requisite number of subnet and hosts-per-subnet. You will often have to do this during a crisis on a live network with your boss, customers and other engineers watching you! Subnetting questions form around 9% of your score in exams such as CompTIA Network+ and the Cisco CCNA. If you work in IT, you will be expected to understand how to subnet and troubleshoot subnetting problems. You will also be expected to be able to allocate IP addressing schemes to various departments in your organization. For job interviews you can expect to be grilled on subnetting problems by senior engineers. 101 Labs - IP Subnetting shows you how to answer any subnetting or network design problem using a simple Cheat Chart. All you need to do is tick the boxes and you get the answer, usually in under 60 seconds. We show you how to subnet IPv6 networks, work out wildcard masks for your firewalls, NAT, routing and access lists. We also show you how to summarize routes for your routing advertisements. All answers and working out are provided. You finish by drilling 33 exam style questions so by the end of the course, you will be the go-to subnetting expert at work. Please use the free resources at www.101labs.net/resources which will help you with the labs. About the Author Paul Browning left behind a career in law enforcement in 2000 and started an IT consulting and training company.
