### **The Electron Theory of Matter**

Hackett  
Publishing

Many students have trouble the first time they take a mathematics course in which proofs play a significant role. This new edition of Velleman's successful text will prepare students to make the transition from solving problems to proving theorems by teaching them the techniques needed to read and write proofs. The book begins with the basic concepts of logic and set theory, to familiarize students with the language of mathematics and how it is interpreted. These

concepts are used as the basis for a step-by-step breakdown of the most important techniques used in constructing proofs. The author shows how complex proofs are built up from these smaller steps, using detailed 'scratch work' sections to expose the machinery of proofs about the natural numbers, relations, functions, and infinite sets. To give students the opportunity to construct their own proofs, this new edition contains over 200 new exercises, selected solutions, and an introduction to Proof Designer software. No background beyond standard high school mathematics is assumed. This book will be useful to anyone interested in logic and proofs:

computer scientists, philosophers, linguists, and of course mathematicians.

Alcestis, Medea, Hippolytus Cambridge University Press

This new volume of three of Euripides' most celebrated plays offers graceful, economical, metrical translations that convey the wide range of effects of the playwright's verse, from the idiomatic speech of its dialogue to the high formality of its choral odes.

**Space Time and Gravitation** Legare Street Press

This book is made up of lectures given, for the most part, before the Society for Ethical Culture of Chicago. The premise tying all of these lectures together is that while not all religions teach

morality, they are all based on ethical principles; that it is one's duty to obey the laws of ethics whether or not one professes a religion; and that men who would not obey them could do no good either to themselves or to others, in this world or the next. Moral action, ethics, Darwinism, the social ideal, personal morality, the ethics of Jesus, the failure of Protestantism and Unitarianism, and the basis of the ethical movement are among the topics discussed.

Ancient Hunters and Their Modern Representatives

Legare Street Press  
This text provides an

account of various experiments, that demonstrate a simplified reality where space and time are relegated to their proper source – the observer. The principles of these experiments and theories originate from the ideas of Einstein, and this text aims to present this 'new' outlook without the need for extensive knowledge of mathematics, physics, or philosophy. This text will be of considerable use to those with a keen interest in physics, and would make for a great addition to any bookshelf. The chapters of this book include: 'The Fitzgerald Contraction', 'Relativity', 'The World of Four Dimensions', 'Fields of Force', 'Kinds

of Space', 'The New Law of Gravitation and the Old Law', 'Weighing Light', 'Other Tests of The Theory', 'Momentum and Energy', etcetera. We are publishing this antiquarian book now in an affordable, modern edition - complete with a new biography of the author.

#### Man, Past and Present

This groundbreaking work explores the evolution of hunting in human societies, from the earliest prehistoric times to the present day. Sollas' insightful analysis provides a fascinating glimpse into the hunting practices of ancient peoples and their modern counterparts.
