### **Developmental Stages in Human Embryos** Springer

This book clearly describes the surgical procedures employed in patients with gastric cancer. The techniques used in the various types of gastrectomy are presented step by step, and the roles of endoscopic treatment and chemotherapy are also discussed. A distinctive practical feature is the

provision of accompanying online videos of standard surgical procedures, which will serve as excellent learning aids for novice practitioners and provide ideal teaching material for experienced surgeons. Surgery remains the mainstay in the treatment of gastric cancer. With advances in tumor biology and technical developments, gastric cancer surgery has become more diverse and its outcomes have steadily improved. However, further improvement of certain aspects of surgical procedures and techniques is still required. Surgery for

Gastric Cancer will acquaint readers with the state of the art in the field and prove a valuable tool in the quest for optimal practice.

Body CT Springer Science & Business Media

Upper Gastrointestinal Surgery is a current and convenient resource for both the surgical resident and the busy practicing surgeon. It provides trainee surgeons an excellent learning and review resource, and it provides up-to-date information on recent developments, research, and data in the context of accepted specialist surgical practice. As with each volume of the Companion to Specialist Surgical Practice series, it provides current and succinct summaries of all key topics within the specialty and concentrates on

the most recent developments and current data. To meet the increasing interest in evidence-based medicine, authors have cited, whenever available, the meta-analysis of randomized controlled trials and identified *Surgery for Gastric Cancer* Saunders The performance of intestinal anastomoses has gradually evolved from an apprenticeship art to a scientific practice. Basic principles for the safe conduct of an intestinal anastomosis still hold true, however, there is much new literature on the role of anastomotic adjuncts including biological membranes, growth factors and a range of bioprosthetic agents as well as an improved understanding of dysregulation of collagen and inflammatory mediators which may

contribute to anastomotic dehiscence and failure. *Intestinal Anastomosis: Basic Science, Construction Techniques and the Management of Anastomotic Failure* is a fully illustrated, up-to-date, comprehensive text which brings together all aspects of the basic science and comparative outcomes of intestinal anastomoses as well as expert commentary on the management of anastomotic failure and the care of high-risk cases. *Intestinal Anastomosis: Basic Science, Construction Techniques and the Management of Anastomotic Failure* is a valuable teaching aid for gastrointestinal surgeons as well as for surgical trainees engaged in complex elective and emergency gastrointestinal surgery.

### **Transanal Endoscopic Microsurgery**

Springer Science & Business Media  
After a practical description of the endoscopic anatomy, the first part of the book deals with such topics as preparing and positioning the patient, anaesthesia, operation theatre layout and operating team, inducing pneumothorax, general operative steps, after-care in the hospital, prevention of thrombosis, prophylactic antibiotics, dangers and risks of the method, and the use of documentation. General operative steps such as thoracoscopic exploration and palpation intervention haemostasis and parenchymal leaks are described in a separate section. A special part is devoted to the diagnostic possibilities and current indications for thoroscopy including: spontaneous pneumothorax, haemothorax, chylothorax; pleural

empyema, bronchopleural fistula, extrathoracic and intrapulmonary cysts and tumours, pericardial fenestration, treatment of malignant effusions, and thoracic sympathectomy.

Surgical Thoracoscopy Saunders Limited

Chronic liver failure is a frequent condition in clinical practice that encompasses all manifestations of patients with end-stage liver diseases.

Chronic liver failure is a multiorgan syndrome that affects the liver, kidneys, brain, heart, lungs, adrenal glands, and vascular, coagulation, and immune systems. Chronic Liver Failure:

Mechanisms and Management covers for the first time all aspects of chronic liver failure in a single book, from pathogenesis to current management. Each chapter is written by a worldwide

known expert in their area and all provide the latest state-of-the-art knowledge. This volume is specifically designed to provide answers to clinical questions to all doctors dealing with patients with liver diseases, not only clinical gastroenterologists and hepatologists, but also to internists, nephrologists, intensive care physicians, and transplant surgeons.

*Inflammatory Bowel Disease and Familial Adenomatous Polyposis* Springer

A notable surgeon and charismatic teacher himself, Professor Ellis has brought together in *Operations* that made *History* a fascinating collection of renowned surgical procedures each one illustrating a different aspect of the history of surgery.

*Pediatric Andrology* World Scientific

The book covers all relevant topics of uropathology (tumoral and non-tumoral), from the normal histology of the genitourinary tract to pathological findings of diseases in the male genital and urinary tract. To make the content more accessible, all content is arranged alphabetically and each entry is uniformly structured, presenting the epidemiology, the clinical signs, the gross and histological features, the immunohistochemical stainings, and the molecular data for each disease. Histological pictures clarify the microscopic findings and help readers understand the differential diagnosis for genitourinary tract diseases. In addition to internationally respected experts on pathologies of the prostate, bladder, kidney and testis, researchers coming

from other disciplines such as molecular biologists, soft tissue pathologists, dermatopathologists, hematopathologists and gynaecopathologists have contributed to this book, thus making it interesting for uropathologists, but also for students, residents, clinicians (surgeons, radiotherapists, oncologists, urologists, dermatologists) and researchers who deal with disciplines that call for knowledge of the pathologies of the male genital and urinary tracts. *Tumors of the Kidney, Bladder, and Related Urinary Structures* Springer Science & Business Media  
This unique book presents a series of concisely written technical notes on the most common surgical oncology procedures. Each procedure is illustrated

with pictures framing the precise technical point of the procedure. The book is accompanied by a CD-ROM that includes video clips of the procedures. Written by top European experts, this volume will provide an invaluable resource for young surgical oncologists to study and critically approach the basic technicalities of surgical procedures. It will also be a useful source of reference for oncologists, surgeons, radiotherapists, surgical oncologists and nurses, as well as final-year medical students.

**New Technologies in Surgical Oncology** Springer Science & Business Media

Knowledge in the field of urologic pathology is growing at an explosive pace. Today's pathologists, specialists,

and residents require a comprehensive and authoritative text that examines the full range of urological diseases and their diagnosis. Written by recognized leaders and educators in the field, the text provides readers with a detailed understanding of all diagnostic aspects of urological disease. Inside this unique resource, readers will explore a broad spectrum of practical information—including etiology, diagnostic criteria, molecular markers, differential diagnosis, ancillary tests, and clinical management. This is sure to be the new definitive text for urological pathology!

Living Related Liver Transplantation CRC Press

This text is a practical and clinically directed presentation of clinical surgical

oncology intended for general surgeons, surgical oncologists and medical oncologists. It aims to answer questions concerning surgical oncology as well as specific organ system cancers. Illustrations are included to enhance understanding.

Medical Embryology Butterworth-Heinemann

Laparoscopic surgery, also called minimal access surgery, has revolutionized the field of surgery over the past few years. It has gained worldwide popularity and acceptance by surgeons and patients alike. Minimal scarring, less pain, and shorter hospital stay are the main reasons behind the global appeal of this novel technique. There has been a tremendous improvement in the technique, as well as

in the instruments. The technique has passed through the stages of simple laparoscopic surgery to advanced levels, where more complicated procedures are being successfully attempted. The recent introduction of robotic surgery is also gaining popularity, in addition to single port laparoscopic surgery (SILS), which can be scarless surgery. Most of the surgical procedures, which were considered contraindication for the laparoscopic approach, have eventually become the most common and acceptable indications today. This book is intended to provide an overview of the most common procedures performed laparoscopically, as well as some recent advancements in the field.

Schein's Common Sense Emergency Abdominal Surgery Springer Science &

### Business Media

This book provides a complete guide to laparoscopic sleeve gastrectomy and the management of obesity. The chapters discuss guidelines for healthcare providers for the management of patients with obesity, the rationale behind choosing patients, performing the procedure in line with the patient's condition, the perioperative period, postoperative requirements, and postoperative complications. This book aims to give readers an understanding of the surgical techniques involved in laparoscopic sleeve gastrectomy and the wider treatment options available. It is relevant to bariatric, metabolic, and general surgeons, physicians, clinical nutritionists as well as students.

### **Computed Tomography in Urology**

### Springer Science & Business Media

The subject matter in this volume was derived from papers presented at the Pediatric Andrology session of the 1st Pan American Congress of Andrology held in Caracas, Venezuela in February 1979, as well as from selected additional manuscripts of interest in this field. Prior to this session, identification of a distinct discipline and specialty devoted to pediatric andrology had not occurred, nor had it been conceptualized. Pediatric andrology encompasses many different areas: disorders of sexual development, structural disease of the genital organs, normal and abnormal puberty, undescended testes, genital tumors, gonadal function and its relationship to growth, virilization, fertility and gender identity all represent areas of specific

interest, to name but a few. Andrology itself is a unique field, bringing together clinicians and basic scientists with diverse back grounds. It should be noted that between one-half and three-quarters of the clinicians contributing to this issue conduct basic research as well. It has been this unique blend of basic research and clinical medicine which has done much to unravel many of these problems characteristic of this field.

**Chronic Liver Failure** Springer Science & Business Media

This book presents comprehensive assessment and up-to-date discussion of the epidemiology, prevention, and treatment of cancer in the elderly, highlighting the growing demands of the disease, its biology, individual susceptibility, the impact of state-of-the-

art and emerging therapies on reducing morbidity, and decision making processes. Describ  
*Cancer in the Elderly* Springer Science & Business Media

Inflammatory bowel disease (IBD) and familial adenomatous polyposis (FAP) are complex diseases. Despite increased knowledge on the pathophysiological process, many aspects remain rather unclear, especially concerning IBD. This book gathers current methods of treatment of these diseases and also presents the management of their complications. The authors give a comprehensive overview of the newer therapies to bring readers up to date.

*Medical Thoracoscopy/pleuroscopy* IARC

This is the first comprehensive book devoted exclusively to cancer in

adolescents and young adults. It compiles medical, epidemiological, biological, psychological, and emotional issues of young adults' oncology. The emphasis is on the differences of the "same" cancer in younger and older patients. Model programs specially designed to care for patients in the age group and surveillance of long-term adverse effects are reviewed.

*Pathology and Genetics of Head and Neck Tumours* Nova Biomedical Updated, reorganized, and revised throughout, this highly lauded three-volume reference provides an interdisciplinary approach to the diagnosis, treatment, and management of head and neck diseases, including the incidence, etiology, clinical presentation, pathology, differential diagnosis, and

prognosis for each disorder-promoting clear communication between pathologists and surgeons. Written by more than 30 internationally distinguished physicians, *Surgical Pathology of the Head and Neck, Second Edition* now contains: over 1045 photographs, micrographs, drawings, and tables-nearly 200 more illustrations than the first edition five new chapters on molecular biology, fine-needle aspiration, vesiculobullous diseases, neck dissections, and radiation a cumulative and expanded index in each volume Unparalleled in scope and content by any other book available on the subject, *Surgical Pathology of the Head and Neck, Second Edition* is a must-have resource for oral, surgical, and general pathologists;

otolaryngologists; oral, maxillofacial, plastic and reconstructive, general, head and neck, and orthopedic surgeons and neurosurgeons; oncologists; hematologists; ophthalmologists; radiologists; endocrinologists; dermatologists; dentists; and residents and fellows in these disciplines.

**Intestinal Anastomosis:** Springer  
This well-illustrated handbook provides answers to important questions that may arise during the retrieval of multiple organs for transplantation and offers step-by-step descriptions of current surgical techniques for procurement of the various thoracic and abdominal organs, including heart, lung, liver, intestine, pancreas, and kidney. The coverage includes detailed instruction on liver splitting techniques and on living

donor liver hepatectomies and laparoscopic and robot-assisted nephrectomy for transplantation. In addition, guidance is provided on preoperative evaluation for multiorgan donation, contraindications, management for organ retrieval in deceased donors, and organ preservation. The advice offered and the questions addressed will be of relevance not only to transplant surgeons, trainees, and fellows but also to all other professionals involved in organ transplantation, including nursing staff in intensive care units and emergency rooms.

**European Guidelines for Quality Assurance in Colorectal Cancer Screening and Diagnosis** Springer  
Science & Business Media

Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations. It is therefore of the utmost importance that they are well aware of the most recent technological evolutions, in order to achieve the best possible results in term of oncological outcome, with a concern on quality of life and economical issues. Furthermore, new techniques can give a fundamental contribution in overcoming the limitations of standard approaches. An essential aim of this book is to underline the great importance and the need of an effective coordination of multi-disciplinary care among surgeons, medical oncologists, radiation therapists, plastic surgeons and ancillary services,

in order to optimise patient outcome. Minerva chirurgica CRC Press  
This publication is dedicated to all the aspects involved in the endoscopic diagnosis of terminal ileum. The most experienced endoscopists, gastroenterologists and pathologists will focus on and discuss the principles of diagnosis and treatment of the main pathologies involved in this district. The technique of ileoscopy with all the newest advances in endoscopic imaging will be discussed. Another chapter will be dedicated to the possible flow chart of diagnosis of the principles diseases after ileoscopy, from capsule endoscopy to double balloon ileoscopy. A final session will be completely aimed at presenting clinical cases of relevant interest.
