Oceania was the last region on earth to be permanently inhabited, with the final settlers reaching Aotearoa/New Zealand approximately AD 1300. This is about the same time that related Polynesian populations began erecting Easter Island's gigantic statues, farming the valley slopes of Tahiti and similar islands, and moving finely made basalt tools over several thousand kilometers of open ocean between Hawai'i, the Marquesas, the Cook Islands, and archipelagos in between. The remarkable prehistory of Polynesia is one chapter of Oceania's human story. Almost 50,000 years prior, people entered Oceania for the first time, arriving in New Guinea and its northern offshore islands shortly thereafter, a biogeographic region labelled Near Oceania and including parts of Melanesia. Near Oceania saw the independent development of agriculture and has a complex history resulting in the greatest linguistic diversity in the world. Beginning 1000 BC, after millennia of gradually accelerating cultural change in Near Oceania, some groups sailed east from this space of inter-visible islands and entered Remote Oceania, rapidly colonizing the widely separated separated archipelagos from Vanuatu to S?moa with purposeful, return voyages, and carrying an intricately decorated pottery called Lapita. From this common cultural foundation these populations developed separate, but occasionally connected, cultural traditions over the next 3000 years. Western Micronesia, the archipelagos of Palau, Guam and the Marianas, was also colonized around 1500 BC by canoes arriving from the west, beginning

equally long sequences of increasingly complex social formations, exchange relationships and monumental constructions. All of these topics and others are presented in The Oxford Handbook of Prehistoric Oceania written by Oceania's leading archaeologists and allied researchers. Chapters describe the cultural sequences of the region's major island groups, provide the most recent explanations for diversity and change in Oceanic prehistory, and lay the foundation for the next generation of research.

Tahiti Nui is an account of the survival of a Polynesian society in the face of successive settlements of missionaries, traders, and administrators.

Beginning with the first explorers and Captain Cook's scientific observations at Point Venus, Dr. Newbury has separated the various strands interwoven in the fabric of Tahitian society, tracing their development and showing how they interacted at successive stages. Missionaries and foreign traders, administrators and Polynesians, planters and immigrant Chinese have all contributed to the distinctive flavor of French Polynesia, with Tahiti and Tahitians becoming increasingly dominant, not just as the focus of the French administration in Pape'ete, but in the social networks and trading

patterns that have evolved.

Legal, Tax and Accounting Strategies for the Canadian Real Estate Investor begins and ends with the premise that buying property in Canada can be a smart, safe and successful way to invest your money. However, like most things in life, success requires hard work. You need to do your homework, understand what you are buying, and know the pros and cons of various decisions. Most importantly, you also need to know how to structure and maintain your investment. That's where we come in. Experience is a good teacher-but its lessons can be nasty and, in the real estate business, mistakes can cost you big bucks. Our goal with this book is to help you do it right-the first time. Rest assured that this book covers a vast range of topics and you're going to appreciate its breadth and depth if you're wondering about things like whether: You should opt for a sole proprietorship versus a partnership or corporate ownership strategy. There are things you can do to manage the way HST impacts your real estate investment business. You need information about the tax implications of a real estate disposition. You can change your bookkeeping system to better meet your needs and those of your accountant. Who Are We? This book was written by two individuals whose collective experience in helping Canadians make wise property investment decisions spans several decades. Steve Cohen is a securities lawyer with a great deal of experience in the real estate sector. George Dube is a chartered accountant whose knowledge is based on many years of helping clients with their property buying needs. Both Steve and George are real estate investors themselves. Working from this foundation, we have put together the definitive guide on how to build a successful real estate portfolio in Canada from a legal, tax and accounting perspective.

"Tahiti is far famed yet too little known." Thus wrote J. M. Orsmond in 1848, and the same assertion can be made in 1972. Thousands of pages had been published about Tahiti and its neighboring islands when Orsmond uttered his judgment, and tens of thousands have been published since that time, but a unified, comprehensive, and detailed description of the pre-European ways of life of the inhabitants of those Islands is yet to appear in print. The present work, lengthy as it is, makes no such claim to comprehensiveness; rather, it is concerned mainly with the social relations of those inhabitants, and it serves up only enough about their technology, their religion, their aesthetic expressions, and so forth to place descriptions of their social relations in context and render them more comprehensible. Volumes 1 and 2 of this work are a reconstruction of the Islanders' way of life as it was believed to have been just before it began to be transformed by European influence—a period labeled the Late Indigenous Era. Volume 3 covers events in Tahiti and Mo'orea from about 1767 to 1815—a period labeled the Early European Era.

Untouched since 1953, the Korean DMZ (Demilitarized Zone) has transformed itself into one of the few ecologically pristine zones and a vital habitat for endangered species. Often cited as a potential "peace park", it could one day be a common ground for reconciliation and harmony. A wealth of data and information has been produced over time, documenting significant aspects of the DMZ and its implications for human and ecological security, both in Korea and worldwide. However, there is no single book in English that brings together the findings on the mechanism of evolution, the ecology and biodiversity of the DMZ. "The DMZ of Korea", by Kwi-Gon Kim, is the first step in this direction. It seeks to link scientific information and policy making for the future DMZ ecosystem management, taking into account the fact that the area has become, over the years, a natural treasure as a habitat for rare birds and other wildlife and a fertile environment for a thriving plant community. It also provides a framework for ensuring the long-term sustainability of the DMZ. The book holistically describes the current environmental status of the DMZ, and identifies bioregions, resources, habitats, and species. By outlining the current scientific data and information needed to classify the different wetland types, assess the biological integrity, understand the threat factors, and to suggest conservation and management strategies, the book provides a "one stop shop" scientific and policy source of information, which will undoubtedly be of great interest to students, researchers, practitioners, and policy decision-makers, in the areas of planning, natural resource management, public management, ecology, landscape architecture, geography, and the life sciences. Prof.Dr.Kwi-Gon Kim obtained his Ph.D. at UCL, University of London, UK. He is a professor emeritus at Seoul National University and the Co- President of the Korea DMZ Council in Seoul, Korea.

In early Hawai'i, kua'āina were the hinterlands inhabited by nā kua'āina, or country folk. Often these were dry, less desirable areas where much skill and hard work were required to wrest a living from the lava landscapes. The ancient district of Kahikinui in southeast Maui is such a kua'āina and remains one of the largest tracts of undeveloped land in the islands. Named after Tahiti Nui in the Polynesian homeland, its thousands of pristine acres house a treasure trove of archaeological ruins—witnesses to the generations of Hawaiians who made this land their home before it was abandoned in the late nineteenth century. Kua'āina Kahiko follows kama'āina archaeologist Patrick Vinton Kirch on a seventeen-year-long research odyssey to rediscover the ancient patterns of life and land in Kahikinui. Through painstaking archaeological survey and detailed excavations, Kirch and his students uncovered thousands of previously undocumented ruins of houses, trails, agricultural fields, shrines, and temples. Kirch describes how, beginning in the early fifteenth century, Native Hawaiians began to permanently inhabit the rocky lands along the vast southern slope of Haleakalā. Eventually these planters transformed Kahikinui into what has been called the greatest continuous zone of dryland planting in the

Hawaiian Islands. He relates other fascinating aspects of life in ancient Kahikinui, such as the capture and use of winter rains to create small wet-farming zones, and decodes the complex system of heiau, showing how the orientations of different temple sites provide clues to the gods to whom they were dedicated. Kirch examines the sweeping changes that transformed Kahikinui after European contact, including how some maka'āinana families fell victim to unscrupulous land agents. But also woven throughout the book is the saga of Ka 'Ohana o Kahikinui, a grass-roots group of Native Hawaiians who successfully struggled to regain access to these Hawaiian lands. Rich with anecdotes of Kirch's personal experiences over years of field research, Kua'āina Kahiko takes the reader into the little-known world of the ancient kua'āina.

The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

Since its publication in 1996, The Oxford Companion to Archaeology has firmly established itself as the standard reference work in the field of archaeology, selling nearly 15,000 copies to date and remaining a favorite among students, scholars, and anyone interested in archaeology. In 700 entries, the second edition provides thorough coverage to historical archaeology, the development of archaeology as a field of study, and the ways the discipline works to explain the past. In addition to these theoretical entries, other entries describe the major excavations, discoveries, and innovations, from the discovery of the cave paintings at Lascaux to the deciphering of Egyptian hieroglyphics and the use of luminescence dating. Much has changed in the field since 1996. Recent developments in methods and analytical techniques (e.g., laser-based mapping and survey systems, new applications of the scanning electron microscope) have revolutionized the ways excavations are performed. Cultural tourism, cultural resource management, heritage, and conservation have been redefined as areas within archaeology, and have had new emphasis given them by scholars and administrators. Major new sites have expanded our understanding of prehistory and human developments through time. The second edition explores each of these advances in the field, adding approximately 200 entries and expanding the total work to three volumes. Neil Asher Silberman, a renowned practicing archaeologist, author, and scholar, and a board member for the first edition, is the editor in chief. In addition to significant expansion, first-edition entries have been thoroughly revised and updated to reflect the progress that has been made in the last decade and a half

*The Growth and Collapse of Pacific Island Societies* MiniCram

Scholars and researchers have long believed that the ability to irrigate is crucial to the development of civilizations. In this book, archaeologist Patrick Kirch challenges this "hydraulic hypothesis" and provides a more accurate and detailed account of the role of "wet" and "dry" cultivation systems in

the development of complex sociopolitical structures. Examining research on cultural adaptation and ecology in Western Polynesia and utilizing extensive data from a variety of important South Pacific sites, Kirch not only reveals how particular systems of production developed within the constraints imposed by environmental conditions, but also explores the tension that arises between contrasting productive systems with differential abilities to produce surplus. He shows that the near total neglect of short-fallow dryland cultivation, as well as arboriculture, or tree-cropping, has seriously distorted the picture that archaeologists and anthropologists have of agricultural intensification and its relation to complex social structure. This work, likely to become a classic, will be central to all future discussions of the ecology and politics of agricultural intensification.

The Growth and Collapse of Pacific Island Societies Archaeological and Demographic Perspectives University of Hawaii Press

**The Oxford Companion to Archaeology** Bib. Orton IICA / CATIE

Were there major population collapses on Pacific Islands following first contact with the West? If so, what were the actual population numbers for islands such as Hawai'i, Tahiti, or New Caledonia? Is it possible to develop new methods for tracking the long-term histories of island populations? These and related questions are at the heart of this new book, which draws together cutting-edge research by archaeologists, ethnographers, and demographers. In their accounts of exploration, early European voyagers in the Pacific frequently described the teeming populations they

encountered on island after island. Yet missionary censuses and later nineteenth-century records often indicate much smaller populations on Pacific Islands, leading many scholars to debunk the explorers' figures as romantic exaggerations. Recently, the debate over the indigenous populations of the Pacific has intensified, and this book addresses the problem from new perspectives. Rather than rehash old data and arguments about the validity of explorers' or missionaries' accounts, the contributors to this volume offer a series of case studies grounded in new empirical data derived from original archaeological fieldwork and from archival historical research. Case studies are presented for the Hawaiian Islands, Mo'orea, the Marquesas, Tonga, Samoa, the Tokelau Islands, New Caledonia, Aneityum (Vanuatu), and Kosrae.
