Carl Abbott, who has
 taught urban studies and
 urban planning in five
 decades, brings together
 urban studies and literary
 studies to examine how
 fictional cities in work by
 authors as different as E.

M. Forster, Isaac Asimov, Kim Stanley Robinson, and China Miéville might help us to envision an urban future that is viable and resilient. Imagining Urban Futures is a remarkable treatise on what is best and strongest in urban theory and practice today, as refracted and intensely imagined in science fiction. As the human population grows, we can envision an increasingly urban society. Shifting weather patterns, rising sea levels, reduced access to resources, and a

host of other issues will radically impact urban environments, while technology holds out the dream of cities beyond Earth. Abbott delivers a compelling critical discussion of science fiction cities found in literary works, television programs, and films of many eras from Metropolis to Blade Runner and Soylent Green to The Hunger Games, among many others.

Most Americans know Patrick Henry as a fiery speaker whose pronouncement "Give me liberty or give me death!" rallied American defiance to the British Crown. But Henry's skills as an orator -- sharpened in the small towns and courtrooms of colonial Virginia -- are only one part of his vast, but largely forgotten, legacy. As historian Thomas S. Kidd shows, Henry cherished a vision of America as a virtuous

republic with a clearly circumscribed central government. These ideals brought him into bitter conflict with other Founders and were crystallized in his vociferous opposition to the U.S. Constitution. In Patrick Henry, Kidd pulls back the curtain on one of our most radical, passionate Founders, showing that until we understand Henry himself, we will neglect many of the Revolution's animating values. Auditing Charlesbridge Focused on Dhaka, and

applicable to other cities, this book uses geospatial techniques to explore land use, climate variability, urban sprawl, population density modeling, flooding, water quality, urban growth modeling, infectious disease and quality of life. Foster + Partners LernerClassroom Level up your stargazing skills and learn to interpret your own astrological birth chart with this fun, accessible guide to the twelve houses of the zodiac, perfect for armchair

astrologers everywhere! So you know your sun sign, rising sign, and moon sign...but what about the rest of your birth chart? It's no longer enough to just to know you're a Scorpio or read your horoscope. After all, delving deeper into our natal charts and the nuances of the astrological world can offer us a rich, exciting tapestry of our innate preferences, relationships, choices, and destiny For those in the know, the zodiac calendar is divided into twelve houses, each

ruled by a different sign (Aquarius, Scorpio, Gemini, etc.) and said to govern a particular set of traits. When we're born, where the planets were stationed relative to those houses inform our natural tendencies.

Understanding each house can bring detailed insights about every aspect of your life: peoples' first impression of you, to your values, communication, pleasure, home and family, partnership, and beyond. In order to fully understand our place in

the universe we need to understand the meaning of each planet, the house it's stationed in, and what that interaction means. Going house by house, practicing astrologer and artist Rachel Stuart-Haas teaches you how to create and interpret your unique birth chart, making this often dense and complicated layer of astrology accessible for newcomers and astrology enthusiasts alike. With her expert guidance, you will gain insight into questions like: -Where will I feel at home? -What career paths

fulfill me? -What do I need in a partner? -What makes me feel abundant? Perfect for anyone who has ever been curious about their place in the world, *The House Your Stars Built* is a must-have and beautiful resource for astrology lovers.

Case Studies in Science Education: The case reports Thomas Hoover
Everybody likes Jesus. Don't they? We overlook that Jesus was Judgmental—preaching hellfire far more than the apostle Paul
Uncompromising—telling people to hate their families
Chauvinistic—excluding women from leadership
Racist—insulting people from other ethnic groups
Anti-

environmental—cursing a fig tree and affirming animal sacrifice
Angry—overturning tables and chasing moneychangers in the temple He demanded moral perfection, told people to cut off body parts, made prophecies that haven't come true, and defied religious and political authorities. While we tend to ignore this troubling behavior, the people around Jesus didn't. Some believed him so dangerous that they found a way to have him killed. The Jesus

everybody likes, says Mark Strauss, is not the Jesus found in the Gospels. He's a figure we've created in our own minds. Strauss believes that when we unpack the puzzling paradoxes of the man from Galilee, we find greater insight into his countercultural message and mission than we could ever have imagined. Mark Wilson presents a highly original and broad-ranging investigation of the way we get to grips with the world conceptually, and the way that philosophical problems commonly arise from this. Words such as color, shape, solidity exemplify the commonplace conceptual tools we employ to describe and order the world around us. But the world's goods are complex in their behaviors and we often overlook the

subtle adjustments that our evaluative terms undergo as their usage becomes gradually adapted to different forms of supportive circumstance. Wilson not only explains how these surprising strategies of hidden management operate, but also tells the astonishing story of how faulty schemes and great metaphysical systems sometimes spring from a simple failure to recognize the innocent wanderings to which our descriptive words are heir. Wilson combines traditional

philosophical concerns about human conceptual thinking with illuminating data derived from a large variety of fields including physics and applied mathematics, cognitive psychology, and linguistics. Wandering Significance offers abundant new insights and perspectives for philosophers of language, mind, and science, and will also reward the interest of psychologists, linguists, and anyone curious about the mysterious ways in which useful language obtains

its practical applicability.

Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment,

analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed as important complements. Charles Munger is Warren Buffett decade's long

business partner, and his investment filter, jokingly called by Mr. Buffett - the abominable no man. The early pages cover Munger's family history, his framework for investing [wait for the fat pitches, and assess each opportunity using rational, rigorous frameworks drawn from multiple disciplines (and not finance theory!)], and even some warm testaments from family, friends and colleagues. The next section, assembled by leading investor Whitney Tilson, is

well edited and benefits from Tilson's massaging of quotations made over time into logical sub-headings. The bulk of the text though is, as the subtitle suggests, the wit and wisdom of Mr. Munger as conveyed through various speeches in the last couple decade or so before 2006.
