Decision-making is a pivotal function of any manager. A knowledge of Accounting, insofar as it affects decision-making, is very important for a manager. And very often, students find Accounting as one of the 'tough' subjects to handle. This book strives to make Accounting intelligible and easily comprehensible to students. The text gives a comprehensive coverage of the three branches of Accounting - Financial Accounting, Management Accounting, and Cost Accounting. It focuses on the various methods and techniques followed in the Management Reporting System. The text deals, in detail, with various accounting transaction procedures, methods of costing, ratio

analysis, budgeting, forecasting, accounting errors, funds flow and cash flow statements, trial balance and balance sheet, and so on. It equips the students with the knowledge in the preparation, analysis, evaluation, and interpretation of financial statements, which will enrich their managerial competence and decision-making skills. KEY FEATURES □ Emphasises the various accounting and decision-making techniques. □ Provides a number of problems and their solutions, besides giving notes, working notes, and exercises, to help the students understand the concepts better. This book is intended as a text for the postgraduate students of Management (MBA/MIB), financial courses (MFC), and undergraduate and postgraduate students of Commerce and those pursuing MCA. In addition, the book will be very useful to practising managers who wish to develop effective and result-oriented decision-making skills.

*Detecting Creative Accounting Practices* McGraw-Hill Companies

This book is about the design and working of management accounting and control systems from an organizational sociology

perspective. It does not deal with the application of quantitative techniques; instead the focus is on the organizational and people side of accounting and control systems--how they are used to influence, motivate and control what people do in organizations. The author's highly successful first book on this topic, *The Social Software of Accounting and Information Systems* (Wiley, 1985) was much acclaimed for its lucid style and careful analysis of the application of theory in practice. This new book offers that same clarity and accessibility in a study which focuses on new developments in organizational sociology at the macro level. The book outlines nearly twenty frameworks for investigating and understanding management accounting and control systems. These frameworks illustrate five distinctive paradigms of organizations and the social world. Case studies are used to bring these frameworks to life and to show how they can be used to analyze, diagnose and resolve real world management accounting and control systems problems and issues. Norman B. Macintosh is a professor at Queen's University, Canada where he teaches in accounting and control. "If you want to know what has been happening at the frontiers of management control research then you could not do better than starting with this book. The exposition is not only of value to scholars on upper level courses grappling with current theory and research but also to the thinking creative executive involved in control system design in today's changing and turbulent business environment. The book is an essential addition to the bookshelf of any management control specialist seeking intellectual stimulation through ideas coupled to practical implementation." Professor Trevor Hopper University of Manchester, UK "This book is required reading for any practitioner or student who desires a sophisticated and intellectually challenging understanding of management accounting." Richard J Boland, Jr Case Western Reserve University, USA "In these days of globalisation and intensified interaction between management cultures the interest in the behavioural and social side of management accounting and control is growing. This is a timely and exciting addition to that literature. The book is recommended as required reading in advanced courses and for professional management accounting programs. A fine volume." Sten Jonsson University of Gothenburg, Sweden Progress, Implementation Issues, Research Opportunities John Kent

Gain an understanding of the principles behind cost accounting and its importance in organizational decision making and business today with the unique, reader-friendly approach in Hansen/Mowen/Heitger's *COST MANAGEMENT, 5E*. This edition addresses functional-based cost and control and, then, activity-based cost systems - giving you the skills to navigate any cost management system. Updates address emerging developments, including the role of data analytics in cost management today. An entire new chapter also examines global issues, such as virtual currency and blockchain. This edition's approach is tailored to the way you learn. Structured examples from familiar companies emphasize the real-world applications and relevance of what you are learning. Clear explanations review the concepts behind each equation or topic, detailing the hows, whys and what-ifs. Integrated CNowv2 resources provide additional computerized exercises and problems for practice and review. This book is a result of the ISD'97, Sixth International Conference on Information Systems Development-Methods and Tools, Theory and Practice held August 11-14, 1997 in Boise, Idaho, USA. The purpose of this Conference was to address the issues facing academia and industry when specifying, developing, managing and improving software systems. The selection of papers was carried out by the

International Program Committee. All papers were reviewed in advance by at least three people. Papers were judged according to their originality, relevance and presentation quality. All papers were judged purely on their own merits, independently of other submissions. This year's Information Systems Development Conference-ISD'97 is the first ISD conference being held in the US. ISD was brought into existence almost ten years ago. It continues the fine tradition of the first Polish-Scandinavian Seminar on Current Trends in Information Systems Development Methodologies, held in Gdansk-Poland in 1988. ISD'98 will be held in Bled, Slovenia. ISD'97 consists not only

of the technical program represented in these proceedings, but also tutorials on improved software testing and end-user information systems and workshop on sharing knowledge within international high technology industries that are intended for both, the research and business communities. We would like to thank the authors of papers accepted for ISD'97 who all made gal lant efforts to provide me with electronic copies of their manuscripts conforming to com mon guidelines. We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions.
