Introducing Intercultural Communication SAGE

This publication provides a comprehensive and scientifically accurate guide to the best-known and most important medicinal plants, including those of special commercial or historical interest. It includes descriptions of more than 300

medicinal plants and their close relatives, with each entry summarising botanical background, geographical origin, therapeutic category, historical and modern uses, active ingredients, and pharmacological effects. Over 500 full-color photographs are included to assist in the identification of the plants.

Books on intercultural communication are rarely written with an intercultural readership in mind. In contrast, this multinational team of authors has put together an introduction to communicating across cultures that uses examples and case studies from around the world. The book

further covers essential new topics, including international conflict, social networking, migration, and the effects technology and mass media play in the globalization of communication.

Written to be accessible for international students too, this text situates communication theory in a truly global perspective. Each chapter brings to life the links between theory and practice and between the global and the local, introducing key theories and their practical applications. Along the way, you will be supported with first-rate learning resources, including: • theory corners with concise, boxed-out digests of key theoretical concepts •

case illustrations putting the main points of each chapter into context • learning objectives, discussion questions, key terms and further reading framing each chapter and stimulating further discussion • a companion website containing resources for instructors, including multiple choice questions, presentation slides, exercises and activities, and teaching notes. This book will not merely guide you to success in your studies, but will teach you to become a more critical consumer of information and understand the influence of your own culture on how you view yourself and others.

A Military History of South Africa OUP Oxford

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective

diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations,

and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to

return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much

safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Youth Violence

Routledge

Youth violence:

Sources and solutions in South Africa thoroughly and carefully reviews the evidence for risk and protective factors that influence the likelihood of young people acting aggressively. Layers of understanding are built by viewing the problem from a multitude of perspectives, including the current situation in which South African

youth are growing up, perspectives from developmental psychology, the influences of race, class and gender, and of the media. The book then reviews the evidence for effective interventions in the contexts of young people's lives – their homes, their schools, their leisure activities, with gangs, in the criminal justice system, in cities and neighbourhoods, and with sexual offenders. In doing so, thoughtful suggestions are made for keeping an evidence-based perspective while (necessarily) adapting interventions for developing world contexts, such as South Africa. *Youth violence in South Africa: Sources and solutions* is a valuable

addition to the library of anyone who has ever wondered about youth violence, or wanted to do something about it. My Children! My Africa! (TCG Edition) Dog Ear Publishing

"Shocking findings show that South African learners are consistently underachieving, counting not only amongst the worst in the world, but often amongst the worst in Africa. Education policy

expert Graeme Bloch states that 60-80% of our schools are dysfunctional. They produce barely literate and numerate learners and Bloch believes the country is headed for a national education crisis. He identifies the toxic mix of factors that are causing this crisis, taking government and teachers to task for not performing as they should and highlighting the socio-economic challenges that many learners face. But Bloch doesn't leave it at that - he offers solutions to turn the situation around. He gives anecdotal evidence of several schools and individual teachers who are getting it right, leaving the reader with hope for the future. This book will speak to

parents, teachers and anyone concerned about the future of the country. It is a powerful call to action"--

Medicinal Plants of the World

National Academies Press
 "A brilliant, witty, and altogether satisfying book." — New York Times Book Review
 The classic work on the

development of human language by the world's leading expert on language and the mind In *The Language Instinct*, the world's expert on language and mind lucidly explains everything you always wanted to know about language: how it works, how children learn it, how it changes, how the brain computes it, and how it evolved. With deft use of examples of humor and wordplay, Steven Pinker weaves our vast knowledge of language into a compelling story: language is a human instinct, wired into our brains by evolution. *The Language Instinct* received the William James Book Prize from the American Psychological Association and the Public Interest Award from the Linguistics

Society of America. This edition includes an update on advances in the science of language since *The Language Instinct* was first published.

Spot on Life Orientation

Thomson/Nelson
The goal of eliminating disparities in health care in the United States remains elusive. Even as quality improves on specific measures, disparities often persist. Addressing these disparities must begin with the fundamental step of bringing the nature of the disparities and the groups at risk for those disparities to light by collecting health care quality information stratified by race, ethnicity and language data. Then attention can be focused on

where interventions might be best applied, and on planning and evaluating those efforts to inform the development of policy and the application of resources. A lack of standardization of categories for race, ethnicity, and language data has been suggested as one obstacle to achieving more widespread collection and utilization of these data. Race, Ethnicity, and Language Data identifies current models for collecting and coding race, ethnicity, and language data; reviews challenges involved in obtaining these data, and makes recommendations for a nationally standardized approach for use in health care quality improvement.

Handbook of Siswati

Library of Alexandria
The issues raised by the role of language in education are some of the most important and contentious faced by education systems across the globe. Language is embedded in the concepts of nationhood and identity, and is therefore directly linked to the very social and political fabric of a country. In a climate of increasing globalisation, development and mobility of populations, nations around the world are concerned with the tension between cultivating a sense of cultural and linguistic cohesion and making use of the linguistic diversity that exists in every country and region. This book examines the

implications and impacts, the dilemmas and potential for language education in relation to education systems and wider society. Split into three key parts, it considers: *current issues in language education, including the role of language in maintaining power and inequalities, in encouraging participation and inclusion and in challenging the status quo; *different approaches to language education around the world; *the potential for language to provide opportunities for the disadvantaged, illustrated by case studies of three cities. This recent volume of the internationally respected World Yearbook of Education

continues the tradition of offering a wide range of international perspectives from leading commentators on a universal concern. The material amassed here will be essential reading for teacher educators, education researchers and school leaders across the world.

The Cautious

Caterpillar Routledge

Of late years a great deal of interest has been taken in the folklore of uncivilized tribes by those who have made it their business to study mankind. It has been found that a knowledge of the traditionary tales of a people is a key to their ideas and a standard of their powers of thought. These stories display their imaginative faculties; they are

guides to the nature of the religious belief, of the form of government, of the marriage customs, in short, of much that relates to both the inner and the outer life of those by whom they are told. These tales also show the relationship between tribes and peoples of different countries and even of different languages. They are evidences that the same ideas are common to every branch of the human family at the same stage of progress. On this account, it is now generally recognised that in order to obtain correct information concerning an uncivilized race, a knowledge of their folklore is necessary. Without this a survey is no more complete

than, for instance, a description of the English people would be if no notice of English literature were taken. It is with a view of letting the people we have chosen to call Kaffirs describe themselves in their own words, that these stories have been collected and printed. They form only a small portion of the folklore that is extant among them, but it is believed that they have been so selected as to leave no distinguishing feature unrepresented. Though these traditionary tales are very generally known, there are of course some persons who can relate them much better than others. The best narrators are almost invariably ancient dames, and the time chosen for story telling

is always the evening. This is perhaps not so much on account of the evening being the most convenient time, as because such tales as these have most effect when told to an assemblage gathered round a fire circle, when night has spread her mantle over the earth, and when the belief in the supernatural is stronger than it is by day. Hence it may easily happen that persons may mix much with Kaffirs without even suspecting that they have in their possession a rich fund of legendary lore.
