Answer Key Chapter 5 - University Physics Volume 2 | OpenStax Ch 5 Review Answers: "Force causes acceleration. Pressure causes pain." The forces acting on an object determine how the object will accelerate. A book with a mass of 1 kg will accelerate at 5 m/s² when a net force of 5 N acts on it - no matter how the force is applied. Pressure depends both on force and the area over which the force is applied ($P = F/A$), so the 5 N force spread over the cover of the book will result in a very small pressure on the book (large area), but a 5 N force applied ...
