BRAIDEN AUGUSTUS

The Development and History of Southgate Street School, Newport, Kentucky, 1866-1955 Cambridge University Press

In this book some of the leading thinkers in development studies trace the history of their multi-disciplinary subject from the late colonial period and its establishment during decolonization all the way through to its contemporary concerns with poverty reduction. They present a critical genealogy of development by looking at the contested evolution and roles of development institutions and exploring changes in development discourses. These recollections, by those who teach, research and practise development, challenge simplistic, unilinear periodizations of the evolution of the discipline, and draw attention to those ongoing critiques of development studies, including Marxism, feminism and postcolonialism, which so often have been marginalized in mainstream development discourse. The contributors combine personal and institutional reflections, with an examination of key themes, including gender and development, NGOs, and natural resource management. The book is radical in that it challenges orthodoxies of development theory and practice and highlights concealed, critical discourses that have been written out of conventional stories of development. The contributors provide different versions of the history of development by inscribing their experiences and interpretations, some from left-inclined intellectual perspectives. Their accounts

elucidate a more complex and nuanced understanding of development studies over time, simultaneously revealing common themes and trends, and they also attempt to reposition Development Studies along a more critical trajectory.. The volume is intended to stimulate new thinking on where the discipline may be moving. It ought also to be of great use to students coming to grips with the historical continuities and divergences in the theory and practice of development.

A necessary dialogue University of Illinois Press

The Idea of Development in Africa challenges prevailing international development discourses about the continent, by tracing the history of ideas, practices, and 'problems' of development used in Africa. In doing so, it offers an innovative approach to examining the history and culture of development through the lens of the development episteme, which has been foundational to the 'idea of Africa' in western discourses since the early 1800s. The study weaves together an historical narrative of how the idea of development emerged with an account of the policies and practices of development in colonial and postcolonial Africa. The book highlights four enduring themes in African development, including their present-day ramifications: domesticity, education, health, and industrialization. Offering a balance between historical overview and analysis of past and present case studies, Elisabeth McMahon and Corrie Decker demonstrate that Africans have always co-opted, challenged, and reformed the idea of development, even as the western-centric development episteme presumes a one-way flow of ideas and funding from the West to Africa.

Researches Into the Early History of

Mankind and the Development of Civilization Cambridge University Press
 International Development: A Postwar History offers the first concise historical overview of international development policies and practices in the 20th century. Embracing a *longue durée* perspective, the book describes the emergence of the development field at the intersection of late colonialism, the Second World War, the onset of decolonization, and the Cold War. It discusses the role of international organizations, colonial administrations, national governments, and transnational actors in the making of the field, and it analyzes how the political, intellectual, and economic changes over the course of the postwar period affected the understanding of and expectations toward development. By drawing on examples of development projects in different parts of the world and in different fields, Corinna R. Unger shows how the plurality of development experiences shaped the notion of development as we know it today. This book is ideal for scholars seeking to understand the history of development assistance and to gain new insight into the international history of the 20th century.

The Development Dilemma Bloomsbury Publishing

This book is a clear and comprehensive analysis of the dynamic connections between science, technology, and economic development from the eighteenth century to the present. Science and technology are now recognized as the crucial components of economic development in poor nations, the motors of growth in developing economies, and among the central issues of contemporary advanced societies. Yet the relationships between

science and technology on the one hand, and between science and technology and economic modernization on the other, are little understood and constantly changing. Ian Inkster includes extended treatments of Japan, China and India, as well as the process of industrialization in the West. Important historical themes, such as the industrial revolution, the transfer of technology and the role of institutions in knowledge and technique diffusion, are approached through the use of detailed historical case studies. For the first time, Inkster draws together a large and complex body of secondary literature, as well as material derived from the author's own research on Britain, Japan, India, and Australia.

A Cold War History Routledge India

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. This book is available as an open access ebook under a CC-BY-NC-ND licence. What is autism and where has it come from? Increased diagnostic rates, the rise of the 'neurodiversity' movement, and growing autism journalism, have recently fuelled autism's fame and controversy. The metamorphosis of autism is the first book to explain our current fascination with autism by linking it to a longer history of childhood development. Drawing from a staggering array of primary sources, Bonnie Evans traces autism back to its origins in the early twentieth century and explains why the idea of autism has always been controversial and why it experienced a 'metamorphosis' in the 1960s and 1970s. Evans takes the reader on a journey of discovery from the ill-managed wards of 'mental deficiency' hospitals, to high-powered debates in the houses of parliament, and beyond.

The book will appeal to a wide market of scholars and others interested in autism.

Security, Prosperity, and a Return to History

London, John Murray Regional Studies is inextricably intertwined with history. Cultural and institutional legacies inform choices between different policy options, meaning that the past plays a crucial role in how we think about regional economic development, planning and policy. Through a selection of accessible theoretical, methodological and empirical chapters, this book explores the connections between regional development and history. Drawing on the expertise of scholars in several disciplines, it links history to topics such as behavioural geography, interdependence, divergence and regional and urban policy. This innovative book will be of interest to researchers across regional studies, planning, economic geography and economic history.

History, Historians and Development Policy Routledge

When and how were cities born? Does urbanization foster innovation and economic development? What was the level of urbanization in traditional societies? Did the Industrial Revolution facilitate urbanization? Has the growth of cities in the Third World been a handicap or an asset to economic development? In this revised translation of *De Jéricho à Mexico*, Paul Bairoch seeks the answers to these questions and provides a comprehensive study of the evolution of the city and its relation to economic life. Bairoch examines the development of cities from the dawn of urbanization (Jericho) to the explosive growth of the contemporary Third World city. In particular, he defines the roles of agriculture and industrialization in the

rise of cities. "A hefty history, from the Neolithic onward. It's ambitious in scope and rich in subject, detailing urbanization and, of course, the links between cities and economies. Scholarly, accessible, and significant."—Newsday "This book offers a path-breaking synthesis of the vast literature on the history of urbanization."—John C. Brown, *Journal of Economic Literature* "One leaves this volume with the feeling of positions intelligently argued and related to the existing state of theory and knowledge. One also has the pleasure of reading a book unusually well-written. It will long both be a standard and stimulate new thought on the central issue of urban and economic growth."—Thomas A. Reiner, *Annals of the American Academy of Political and Social Science*

The History of Creation. Zed Books Ltd.

This book explores the history of economic development thought, with an emphasis on alternative approaches in macro development economics. Given that the pioneers of development economics in the 1940s and 1950s drew inspiration from classical political economists, this book opens with a review of key classical scholars who wrote about the progress of the wealth of nations. In reviewing the thinking of the pioneers and those that followed, both their theories of development and underdevelopment are discussed. Overall, the book charts the evolution of development economic thought from the early developmentalists and structuralists, through to the neo-Marxist approach and radical development theory, the neo-liberal counter revolution, and the debate between new developmentalists and neo-liberal scholars. It ends with an assessment of the state of the field today. This book

will be of interest to all scholars and students interested in the evolution of development economics.

A Global History University of Chicago Press

This edited volume examines the relationship between economic ideas, economic policies and development institutions, analysing the cases of 11 peripheral countries in Europe, Latin America and Asia across the nineteenth and twentieth centuries. It sheds light on the obstacles that have prevented the sustained economic growth of these countries and examines the origins of national and regional approaches to development. The chapters present a fascinating insight into the ideas and visions in the different locations, with the overarching categories of economic nationalism and economic liberalism and how they have influenced development outcomes. This book will be valuable reading for advanced students and researchers of development economics, the history of economic thought and economic history.

The Idea of Development in Africa Routledge

In this classic text, now in its fourth edition, Gilbert Rist provides a complete and powerful overview of what the idea of development has meant throughout history. He traces it from its origins in the Western view of history, through the early stages of the world system, the rise of US hegemony, and the supposed triumph of third-worldism, through to new concerns about the environment and globalization. In a new chapter on post-development models and ecological dimensions, written against a background of world crisis and ideological disarray, Rist considers possible ways forward and brings the book completely up to date. Throughout,

he argues persuasively that development has been no more than a collective delusion, which in reality has resulted only in widening market relations, whatever the intentions of its advocates.

A History of the Third World Since 1945 Cambridge University Press

Economic development has been for many years the dominant national policy objective of the countries in the Third World, but there has been little consensus on the goals and definitions of development. Focusing on the era since World War II, H. W. Arndt traces the history of thought about economic development to show readers, in nontechnical terms, what the development objective has meant to political and economic theorists, policymakers, and politicians from Adam Smith to Ayatollah Khomeini.

Morningside Heights Oxford University Press

This is an easy-to-read book that explains how and why Japan industrialized rapidly. It traces historical development from the feudal Edo period to high income and technology in the current period. Catch-up industrialization is analyzed from a broad perspective including social, economic and political aspects. Historical data, research and contesting arguments are amply supplied. Japan's unique experience is contrasted with the practices of today's developing countries. Negative aspects such as social ills, policy failures, military movements and war years are also covered. Nineteenth-century Japan already had a happy combination of strong entrepreneurship and relatively wise government, which was the result of Japan's long evolutionary history. Measured contacts with high civilizations of China, India and the West allowed

cumulative growth without being destroyed by them. Imported ideas and technology were absorbed with adjustments to fit the local context. The book grew out of a graduate course for government officials from developing countries. It offers a comprehensive look and new insights at Japan's industrial path that are often missing in standard historical chronicles. Written in an accessible and lively form, the book engages scholars as well as novices with no prior knowledge of Japan.

The Development Century Courier Corporation

This edited volume addresses the root causes of Africa's persistent poverty through an investigation of its longue durée history. It interrogates the African past through disease and demography, institutions and governance, African economies and the impact of the export slave trade, colonialism, Africa in the world economy, and culture's influence on accumulation and investment. Several of the chapters take a comparative perspective, placing Africa's developments aside other global patterns. The readership for this book spans from the informed lay reader with an interest in Africa, academics and undergraduate and graduate students, policy makers, and those in the development world.

Regional Economic Development and History Routledge

The highly publicized obscenity trial of Radclyffe Hall's *The Well of Loneliness* (1928) is generally recognized as the crystallizing moment in the construction of a visible modern English lesbian culture, marking a great divide between innocence and deviance, private and public, New Woman and Modern Lesbian. Yet despite unreserved agreement on the importance of this cultural moment,

previous studies often reductively distort our reading of the formation of early twentieth-century lesbian identity, either by neglecting to examine in detail the developments leading up to the ban or by framing events in too broad a context against other cultural phenomena.

Fashioning Sapphism locates the novelist Radclyffe Hall and other prominent lesbians--including the pioneer in women's policing, Mary Allen, the artist Gluck, and the writer Bryher--within English modernity through the multiple sites of law, sexology, fashion, and literary and visual representation, thus tracing the emergence of a modern English lesbian subculture in the first two decades of the twentieth century.

Drawing on extensive new archival research, the book interrogates anew a range of myths long accepted without question (and still in circulation) concerning, to cite only a few, the extent of homophobia in the 1920s, the strategic deployment of sexology against sexual minorities, and the rigidity of certain cultural codes to denote lesbianism in public culture.

Manchester University Press

This classic book tells the story of the development of Income Tax from its beginning in 1799 to the present day and relates it to the social, economic and political history of the period. There have been studies of Income Tax at various stages in its growth; studies of finance and taxation in general in which Income Tax has been closely concerned; studies too of some of the Chancellors of the Exchequer who have made significant contributions to the Income Tax system; but this is the first time an attempt has been made to encompass the whole 160 years or so of its life in one volume. And a fascinating story it is too when set in perspective. The author shows how

Income Tax was introduced to finance the Napoleonic Wars, how it was revived by Peel to pay for Free Trade, and how it underwrote Victorian prosperity and confidence. He then describes its immense expansion through two World Wars to its present position as a dominant feature of British finance. This book was first published in 1966.

The Development of Modern Spain

Routledge

This reinterpretation of the history of modern Spain from the Enlightenment to the threshold of the twenty-first century explains the surprising changes that took Spain from a backward and impoverished nation, with decades of stagnation, civil disorder, and military rule, to one of the ten most developed economies in the world. The culmination of twenty years' work by the dean of economic history in Spain, founder of the *Revista de Historia Económica* and recipient of the Premio Rey Juan Carlos, Spain's highest honor for an academic, the book is rigorously analytical and quantitative, but eminently accessible. It reveals views and approaches little explored until now, showing how the main stages of Spanish political history have been largely determined by economic developments and by a seldom mentioned factor: human capital formation. It is comparative throughout, and concludes by applying the lessons of Spanish history to the plight of today's developing nations.

Glare University of Chicago Press

Fluent description of the development of both the integral and differential calculus — its early beginnings in antiquity, medieval contributions, and a consideration of Newton and Leibniz.

The History of Development Harvard

University Press

This book is the first quantitative

description of Europe's economic development at a regional level over the entire twentieth century. Based on a new and comprehensive set of data, it brings together a group of leading economic historians in order to describe and analyze the development of European regions, both for nation states and for Europe as a whole. This provides a new transnational perspective on Europe's quantitative development, offering for the first time a systematic long-run analysis of national policies independent from the use of national statistical units. The new transnational dimension of data allows for the analysis of national policies in a more thorough way than ever before. The book provides a comprehensive database at the level of modern NUTS 2 regions for the period 1900–2010 in 10-year intervals, and a panoramic view of economic development both below and above the national level. It will be of great interest to economic historians, economic geographers, development economists and those with an interest in economic growth.

Science and Technology in History Zed Books Ltd.

"This superb collection assembles a number of stimulating and theoretically current contributions by outstanding scholars."—Angelique Haugerud, author of *The Culture of Politics in Modern Kenya*

The History of an Idea Univ of California Press

Reassessing the developing world through the lens of Europe's past Today's developing nations emerged from the rubble of the Second World War. Only a handful of these countries have subsequently attained a level of prosperity and security comparable to that of the advanced industrial world.

The implication is clear: those who study the developing world in order to learn how development can be achieved lack the data to do so. In *The Development Dilemma*, Robert Bates responds to this challenge by turning to history, focusing on England and France. By the end of the eighteenth century, England stood poised to enter “the great transformation.” France by contrast verged on state failure, and life and property were insecure. Probing the histories of these countries, Bates uncovers a powerful tension between prosperity and security: both may be necessary for development, he argues, but efforts to achieve the one threaten the achievement of the other. A fundamental tension pervades the political economy of development. Bates

also argues that while the creation of a central hierarchy—a state—may be necessary to the achievement of development, it is not sufficient. What matters is how the power of the state is used. France and England teach us that in some settings the seizure and redistribution of wealth—not its safeguarding and fostering—is a winning political strategy. These countries also suggest the features that mark those settings—features that appear in nations throughout the developing world. Returning to the present, Bates applies these insights to the world today. Drawing on fieldwork in Zambia and Kenya, and data from around the globe, he demonstrates how the past can help us to understand the performance of nations in today’s developing world.
