Week 1: Calculus I Practice Problem Solutions

Find $f_0(x)$. Solution. The temptation here is to use the power rule or the exponential rule but in the current form, neither apply since both the base and the exponent depend on x . To x this, we write $f(x) = e(2+\sin(x))\log(\)$. Thus $f_0(x) = e(2+\sin(x))\log(\)^2 + \sin(x) x + \cos(x)\log(x) = x^2 + \sin(\)$.

Most sections should have a range of difficulty levels in the problems although this will vary from section to section.

Understanding Calculus: Problems, Solutions, and Tips ...

Calculus questions, on differentiable functions, with detailed solutions are presented. We first present two important theorems on differentiable functions that are used to discuss the solutions to the questions. Calculus Questions with Answers (5). Calculus questions, on tangent lines, are presented along with detailed solutions.

Calculus Problem Solutions

Solving many types of calculus problems usually requires employing precalculus—algebra and trigonometry—to work out a solution. For this reason, Professor Edwards devotes the first few lectures to reviewing key topics in precalculus, then he covers some basic concepts such as limits and continuity before moving on to the two simple, yet brilliant ideas behind calculus—the derivative and the integral.
