This second annual report presents comparative year-to-year data on the extent and nature of violence on television across programme genres and channel types. It contributes new data on the effectiveness of various kinds of violence ratings and advisories for children and young adolescent audiences. It

also presents a fresh analysis of a national survey of adolescents that shed light on the most appropriate audiences for anti-violence public service announcements. Finally, it provides novel analysis of `high risk' presentations of violence most likely to affect younger audiences.

This book explores the place of China and the Chinese during the age of imperialism. Focusing not only on the state but also on the vitality of Chinese culture and the Chinese diaspora, it examines the seeming contradictions of a period in which China came under immense pressure from imperial expansion while remaining a major political, cultural and demographic force in its own right. Where histories of China commonly highlight episodes of conflict and subjugation in China's relations with the West, the contributions to this volume explore the complex spaces where empires and their peoples did not merely collide but also became entangled.
