State Highway-Rail Grade Crossing Action Plans (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the State Highway-Rail Grade Crossing Action Plans (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 This final rule complies with a statutory mandate that the Secretary of Transportation (Secretary) issue a rule to require the ten States with the most highway-rail grade crossing collisions, on average, over the past three years, to develop State highway-rail grade crossing action plans. The final rule addresses the development, review, and approval of these highway-rail grade crossing action plans. This final rule also removes the preemption provision of this regulation. From the 1830s to today, the railroad industry has developed myriad complex mechanisms to help keep North America's railroad rights-of-ways safe, efficient, and relatively accident-free. In this paperback rerelease of the

successful 2003 title, the otherwise-arcaic world of railroad signaling is explained in concise language and brought to life with nearly 200 fantastic photographs that depict signaling history and all aspects of modern operations. Author and photographer Brian Solomon brings his wealth of knowledge and photographic talent to a subject that has not often been tackled in book form, yet is integral to the American railroad experience.

An award-winning account of a crisis in railroad history: "This absorbing book takes you on an entertaining ride."

—Chicago Tribune A saga about one of the oldest and most romantic enterprises in the land—America's railroads—The Men Who Loved Trains introduces the chieftains who have run the railroads, both those who set about grabbing power and big salaries for themselves, and others who truly loved the industry. As a journalist and associate editor of Fortune magazine who covered the demise of Penn Central and the creation of Conrail, Rush Loving often had a front-row seat to the foibles and follies of this group of men. He uncovers intrigue, greed, lust for power, boardroom battles, and takeover wars and turns them into a page-turning story. He recounts how the chairman of CSX Corporation, who later became George W. Bush's Treasury secretary, managed to make millions for himself while his company drifted in chaos. Yet there were also those who loved trains and railroading—and who played key roles in reshaping transportation in the northeastern United States. This book will delight not only the rail fan, but anyone interested in American business and history. Includes photographs

"For over a century, railroading provided the most important industrial occupation for blacks. Brakemen, firemen, porters, chefs, mechanics, laborers - African American men and women have been essential to the daily operation and success of American railroads. The connections between railroads and African Americans extend well beyond employment. Civil rights protests beginning in the late 19th century challenged railroad segregation and job discrimination; the major waves of black migration to the North depended almost entirely on railroads; and railroad themes and imagery penetrated deep into black art, literature, drama, folklore, and music."--Page 2 of cover.

Preparedness (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the Passenger Train Emergency Preparedness (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 FRA is amending its existing regulation entitled Passenger Train Emergency Preparedness by revising or clarifying various provisions. The final rule clarifies that railroad personnel who communicate or coordinate with first responders during emergency situations must receive certain initial and periodic training and be subject to operational tests and inspections related to the railroad's emergency preparedness plan. The final rule also clarifies that railroads must develop procedures in their emergency preparedness plans that specifically address the safety of passengers with disabilities during actual and simulated emergency situations, such as during train evacuations. The rule also limits the need for FRA to formally approve certain purely administrative changes to approved emergency preparedness plans. In addition, the final rule requires that operational tests and inspections be conducted in accordance with a program that meets certain minimum requirements. Finally, the rule removes as unnecessary the provision discussing the preemptive effect of the regulations. The American public has a fascination with railroad wrecks that goes back a long way. One hundred years ago, staged railroad accidents were popular events. At the Iowa State fair in 1896, 89,000 people paid \$20 each, at current prices, to see two trains, throttles wide open, collide with each other. "Head-on Joe" Connolly made a business out of "cornfield meets" holding seventy-three events in thirty-six years. Picture books of train wrecks do good business presumably because a train wreck can guarantee a spectacular destruction of property without the messy loss of life associated with aircraft accidents. A "train wreck" has also entered the popular vocabulary in a most unusual way. When political manoeuvring leads to failure to pass the federal budget, and a shutdown is likely of government services, this is widely called a "train wreck. " In business and team sports, bumbling and lack of coordination leading to a spectacular and public failure to perform is also called "causing a train wreck. " A person or organization who is disorganized may be labelled a "train wreck. " It is therefore not surprising that the public perception of the safety of railroads centers on images of twisted metal and burning tank cars, and a general feeling that these events occur quite often. After a series of railroad accidents, such as occurred in the winter of 1996 or the summer of 1997, there are inevitable calls that government "should do something.

Restrictions on Railroad Operating Employees Use of Cellular Telephones and Other Electronic Devices (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the Restrictions on Railroad Operating Employees Use of Cellular Telephones and Other Electronic Devices (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 FRA is amending its railroad communications regulations by restricting use of mobile telephones and other distracting electronic devices by railroad operating employees. This rule codifies most of the requirements of FRA Emergency Order No. 26, which is supplanted by this final rule on the date it becomes effective. FRA has revised some of the substantive requirements of that Emergency Order as well as its scope to accommodate changes that FRA believes are appropriate based upon its experience with the Emergency Order and in response to public comments submitted in response to the proposed rule. Gripping forensic tales explain how and why trains crash. Trains are massive—with some weighing 15,000 tons or more. When these metal monsters collide or go off the rails, their destructive power becomes clear. In this book, George Bibel presents riveting

tales of trains gone wrong, the detective work of finding out why, and the safety improvements that were born of tragedy. Train Wreck details numerous crashes, including 17 in which more than 200 people were killed. Readers follow investigators as they sift through the rubble and work with computerized event recorders to figure out what happened. Using a mix of eyewitness accounts and scientific explanations, Bibel draws us into a world of forensics and human drama. Train Wreck is a fascinating exploration of • runaway trains • bearing failures • metal fatigue • crash testing • collision dynamics • bad rails

Safety Glazing Standards (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the Safety Glazing Standards (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 In this final rule, FRA is revising and clarifying existing regulations related to the use of glazing materials in the windows of locomotives, passenger cars, and cabooses. This final rule reduces paperwork and other economic burdens on the rail industry by removing a stenciling requirement for locomotives, passenger cars, and cabooses that are required to be equipped with glazing. This final rule also clarifies the application of the regulations to older equipment and to the end locations of all equipment to provide more certainty to the rail industry and more narrowly address FRA's safety concerns. In addition, this final rule clarifies the definition of passenger car, updates the rule by removing certain compliance dates that are no longer necessary, and,

in response to comments on the proposed rule, modifies the application of the regulations to passenger cars and cabooses in a railroad's fleet that are used only for private transportation purposes and to older locomotives used in incidental freight service. It took ten years of laborious planning and exhaustive negotiations to create the mammoth Penn Central Railroad, the largest railroad in United States history. When the leviathan was finally born of a merger between the Pennsylvania and New York Central Railroads on February 1, 1968, the event was hailed as a great day for railroading. But the baby giant survived only 367 days. The crash of the Penn Central set a new record, this time for the largest bankruptcy the United States had ever seen. "The Wreck of the Penn Central" provides a close-up view of the events that brought the Big Train to bankruptcy court--over-regulation, subsidized competition, big labor featherbedding, greed, corporate backstabbing, stunning incompetence, and, yes, even a little sex.
