With more kids at home now . . . here is a book for parents, family members and friends who want to maximize this time for a deeper learning experience for their children and themselves. Free Range Learning will encourage and excite those who want their children to reap important benefits from this period of "sheltering in place," learning at home. This is a book for anyone simply wanting some fresh ideas at this time, or those who wonder if a commitment to ongoing homeschooling might actually result in longer term benefits! The material in this book is backed by scientific and educational studies, along with the testimonies of scores of parents and kids from around the world. The work here is applicable for young people from pre-school through high school. Studies indicate that adults who were homeschooled are: * More likely to vote, volunteer and be involved in their communities than graduates of conventional

schools. * Read more books than average. * More likely to have taken college level courses than the population as a whole. * Tend to be independent and self-reliant. Children are naturally "free range" learners. They build knowledge and skills naturally, within the full spectrum of their daily lives, while observing, exploring and pursuing their interests. This book guides any parent or educator in assisting that process.

This updated classic by Maria Montessori's closest collaborator reveals the inspirations behind the greatest educational innovator of all time Maria Montessori is important background reading for parents considering Montessori education for their children, as

well as for those training to become Montessori teachers. The first woman to win a degree as a Doctor of Medicine in Italy in 1896, Maria Montessori's mission to improve children's education began in the slums of Rome in 1907, and continued throughout her lifetime. Her insights into the minds of children led her to develop prepared environments and other tools and devices that have come to characterize Montessori education today. Her influence in other countries has been profound and many of her teaching methods have been adopted by educators generally. Part biography and part exposition of her ideas, this engaging book reveals through her letters and personal diaries Maria Montessori's humility and delight in the success of her educational experiments and is an ideal introduction to the principals and practices of the greatest educational pioneer of the 20th century. -- The new introduction to "Maria Montessori: Her Life and Work" by Lee Havis, executive director of the International Montessori Society, discusses the changes that have taken place in Montessori education within recent years. -- An updated appendix of Montessori periodicals, courses, societies, films, and teaching materials. -- A revised bibliography of books by and about Maria Montessori.

A leading educator discusses the importance of the first six years to a child's normal physical and emotional development

Education for Human Development Oxford University Press

This book is intended to follow Education for a New World and to help teachers to envisage the child's needs after the age of six. We claim that the average boy or girl of twelve years who has been educated till then at one of our schools knows at least as much as the finished High School product of several years' seniority, and the achievement has been at no cost of pain or distortion to body or mind. Rather are our pupils equipped in their whole being for the adventure of life, accustomed to the free exercise of will and judgment, illuminated by imagination and enthusiasm. Only such pupils can exercise rightly the duties of citizens in a civilised commonwealth. The first four chapters are mainly psychological, showing the changed personality with which the teacher has to deal at six years of age, and the need for a corresponding change of approach. The secret of success is found to lie in the right use of imagination in awakening interest, and the stimulation of seeds of interest already sown by attractive literary and pictorial material, but all correlated to a central idea, of greatly ennobling inspiration—the Cosmic Plan, in which all, consciously or unconsciously, serve the great Purpose of Life. It is shown how the conception of evolution has been modified of late through geological and biological discoveries, so that self-perfection now has to yield precedence to service among the primary natural urges. The next eight chapters show how the Cosmic Plan can be presented to the child, as a thrilling tale of the earth we live in, its many changes through slow ages when water was Nature's chief toiler for accomplishment of her purposes, how land and sea fought for supremacy, and how equilibrium of elements was achieved, that Life might appear on the stage to play its part in the great drama. Illustrated as it must be by fascinating, charts and diagrams, the creation of earth as we now know it unfolds before the child's imagination, and always with emphasis on the function each agent has to perform in Nature's household, whether consciously or unconsciously, failure in this alone leading to extinction. So the tale proceeds till Palaeolithic Man appears, most significantly traced by the tools he used on his environment rather than by physical remains of so slight a creature. The new element of mind is brought to creation by man, and from that time the children are helped to see the great acceleration that has taken place in evolution. They learn to reverence the earliest pioneers, who toiled for purposes unknown

to them but now to be recognised. Nomadic men and settlers alike contributed to build up early communities, and by interchanges of war and peace to share and spread social amenities. From chapter thirteen brief descriptions are given of some of the earliest civilizations, particularly with a view to their impacts on each other, showing human society as slowly organising itself towards unity, just as, in the individual human being, organs are built around separate centres of interest, to be later connected by the blood-circulatory system and the nerves, into an integrated human organism. So the child is led, by review of some of the most thrilling epochs of world-history, to see that so far humanity has been in an embryonic stage, and that it is just now emerging into true birth, able to consciously realise its true unity and function. The last chapters go back to the psychological point of view, urging on educators the supreme importance, to the nation and to the world, of the tasks imposed on them. Not in the service of any political or social creed should the teacher work, but in the service of the complete human being, able to exercise in freedom a self-disciplined will and judgment, unperverted by prejudice and undistorted by fear.

Dr. Montessori's Own Handbook Schocken

One hundred and ten years ago, Maria Montessori, the first female physician in Italy, devised a very different method of educating children, based on her observations of how they naturally learn. In *Montessori*, Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori. Lillard presents the research behind nine insights that are foundations of Montessori education, describing how each of these insights is applied in the Montessori classroom. In reading this book, parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and, more importantly, why it happens and why it works. Lillard explains the scientific basis for Montessori's system and the distinctions between practices in traditional, "Montessomething," and authentic Montessori education. Furthermore, in this new edition, she presents recent studies showing evidence that this alternative to traditional schooling does indeed make a difference. Montessori is indispensable reading for anyone interested in teaching, training, or considering Montessori schooling, in developmental psychology, or in understanding about human learning and education overall.

Montessori: Letter Work Schocken

from the Foreword: Possibly the heartless treatment of children, from the practice of infanticide and abandonment through to the neglect, the rigors of swaddling, the purposeful starving, the beatings, the solitary confinement, and so on, was and is only one aspect of the basic aggressiveness and cruelty of human nature, of the inbred disregard of the rights and feelings of others. Children, being physically unable to resist aggression, were the victims of forces over which they had no control, and they were abused in many imaginable and some almost unimaginable ways by way of expressing conscious or more commonly unconscious motives of their elders... The present volume abounds in evidence of all kinds, from all periods and peoples. The story is monotonously painful, but it is high time that it should be told and that it should be taken into account...

Montessori: A Modern Approach has been called the single best book for anyone -- educator, childcare professional, and especially parent -- seeking answers to the questions: What is the Montessori method? Are its revolutionary ideas about early childhood education relevant to today's world? And most important, especially for today's dual-career couples. Is a Montessori education right for my child? Paula Polk Lillard writes both as a trained educator and as a concerned parent -- she has many years as a public school teacher, but it was her enthusiasm for the education her own child experienced in a Montessori school that led her to become a leading voice in the Montessori movement in this country. Her book offers the clearest and most concise statement of the Montessori method of child development and education available today.

Elevating Child Care: A Guide to Respectful Parenting Penguin

What can parents do to help their youngest children in their task of self-formation? How does the Montessori method of hands-on learning and self-discovery relate to the youngest infants? This authoritative and accessible book answers these and many other questions. Based on Dr. Maria Montessori's instructions for raising infants, its comprehensive exploration of the first three years incorporates the furnishings and tools she created for the care and comfort of babies. From the design of the baby's bedroom to the child-sized kitchen table, from diet and food preparation to clothing and movement, the authors provide guidance for the establishment of a beautiful and serviceable environment for babies and very young children. They introduce concepts and tasks, taking into account children's "sensitive periods" for learning such skills as dressing themselves, food preparation, and toilet training. Brimming with anecdote and encouragement, and written in a clear, engaging style, *Montessori from the Start* is a practical and useful guide to raising calm, competent, and confident children.
