*Southeast Regional  
Perspectives on  
Magnuson-Stevens Act  
Reauthorization* Food &  
Agriculture Org.  
The Ocean Sunfishes:  
Evolution, Biology and  
Conservation is the first  
book to gather into one  
comprehensive volume  
our fundamental  
knowledge of the world-  
record holding,  
charismatic ocean  
behemoths in the family  
Molidae. From evolution  
and phylogeny to  
biotoxins, biomechanics,  
parasites, husbandry and  
popular culture, it outlines  
recent and future  
research from leading  
sunfish experts worldwide  
This synthesis includes  
diet, foraging behavior,  
migration and fisheries  
bycatch and overhauls  
long-standing and  
outdated perceptions.  
This book provides the  
essential go-to resource  
for both lay and academic  
audiences alike and  
anyone interested in  
exploring one of the

ocean's most elusive and  
captivating group of  
fishes.  
*Deep-Sea Fishes* National  
Academies Press  
"By examining a suite of  
over 90 indicators for nine  
major U.S. fishery  
ecosystem jurisdictions,  
Link and Marshak  
systematically track the  
progress the U.S. has  
made toward advancing  
ecosystem-based fisheries  
management (EBFM) and  
making it an operational  
reality. Covering a range  
of socioeconomic,  
governance,  
environmental forcing,  
major pressures, systems  
ecology, and fisheries  
criteria, they evaluate  
progress toward EBFM in  
the U.S., covering a wide  
range of longitude,  
latitude, and parts of  
major ocean basins,  
representing over 10% of  
the world's ocean surface  
area. They view progress  
toward the  
implementation of EBFM  
as synonymous with  
improved management of  
living marine resources in  
general, and highlight  
lessons learned from a  
national perspective.  
Although US-centric, the

lessons learned are  
applicable for all parts of  
the global ocean. Though  
much work remains,  
significant progress has  
been made to better  
address many of the  
challenges facing the  
sustainable management  
of our living marine  
resources"--Publisher's  
description.  
[Deep-Sea Fishes](#) Frontiers  
Media SA  
This publication gives an  
updated review of the  
quantity of discards in the  
world's marine fisheries,  
using information from a  
broad range of fisheries in  
all continents. A number  
of policy issues are  
discussed including a 'no  
discards' approach to  
fisheries management,  
the need for balance  
between bycatch  
reduction and bycatch  
utilisation initiatives, and  
concerns arising from  
incidental catches of  
marine mammals, birds  
and reptiles. The report  
also highlights the need  
for more robust methods  
of estimating discards,  
and the development of  
bycatch management  
plans.

*Protection through Trade*  
Cambridge University Press

With species existing in all subpolar seas, king crabs are one of the most valuable seafoods. Major fluctuations in their abundance have stimulated a flurry of research and a rapid expansion of the scientific literature in the last decade. *King Crabs of the World: Biology and Fisheries Management* consolidates extensive knowledge on the biology, systematics, anatomy, life history, and fisheries of king crabs and presents it in a single volume. This book is the first comprehensive scientific reference devoted to the biology and fisheries of king crabs. The first part of the book describes king crabs and their place in the world, covering geographic distribution, depth and temperature ranges, and maps of known habitats. Chapters examine phylogenetic relationships, evolutionary history and phylogeography, internal and external anatomy of king crabs, and the history of North Pacific fisheries. There is also a chapter that presents a comprehensive overview of diseases and other anomalies of king crabs.

The second part of the book describes the life history and biology of various king crab species, including embryonic development and environmental factors, the development and biology of larvae, the ecology and biology of juvenile stages, reproductive strategies of fished species, and the growth and feeding of king crabs and their ecological impacts. The third part of the book discusses human and environmental interactions with king crabs through fisheries, management, and ecosystems. Topics include the impacts of fishing—bycatch, handling, and discard mortality—king crab aquaculture and stock enhancement, and king crabs from various regions such as Southern Hemisphere waters, the Barents Sea, and Alaska. A chapter synthesizing various aspects of king crab biology provides an ecosystem-scale perspective and the final chapter presents the author's outlook on the future of king crab research and populations. *Commerce, Justice, Science, and Related Agencies Appropriations for Fiscal Year 2012*  
Marine Fisheries

*Review Ecosystem-Based Fisheries Management*

Despite an increasing global awareness of environmental concerns, setting internationally binding and ambitious commitments has proven exceedingly complex. As states are seeking alternative methods to support global environmental protection, this book takes a closer look at the possibility of using national trade measures that make market access conditional on the environmental impact of the production process abroad. [Protecting, Sustaining, Rebuilding Our Nation's Living Oceans](#), NOAA Fisheries 2001 Report  
Edward Elgar Publishing

From ancient megalodons to fearsome Great Whites, this book tells the complete, untold story of how sharks emerged as Earth's ultimate survivors, by world-leading paleontologist John Long. "Will keep you on the edge of your seat from its first page to its last page."—Jared Diamond, Pulitzer Prize-winning author of *Guns, Germs, and Steel* Sharks have been fighting for their lives for 500 million years and today are under dire threat. They are the longest-surviving

vertebrate on Earth, outlasting multiple mass extinction events that decimated life on the planet. But how did they thrive for so long? By developing superpower-like abilities that allowed them to ascend to the top of the oceanic food chain. John Long, who for decades has been on the cutting edge of shark research, weaves a thrilling story of sharks' unparalleled reign. The *Secret History of Sharks* showcases the global search to discover sharks' largely unknown evolution, led by Long and dozens of other extraordinary scientists. They embark on digs to all seven continents, investigating layers of rock and using cutting-edge technology to reveal never-before-found fossils and the clues to sharks' singular story. As the tale unfolds, Long introduces an enormous range of astonishing organisms: a thirty-foot-long shark with a deadly saw blade of jagged teeth protruding from its lower jaws, a monster giant clams crusher, and bizarre sharks fossilized while in their mating ritual. The book also includes startling new facts about the mighty megalodon, with its sixty-six-foot-long

body, massive jaws, and six-inch serrated teeth. With insights into the threats to sharks today, how they contribute to medical advances, and the lessons they can teach us about our own survival, *The Secret History of Sharks* is a riveting look at scientific discovery with ramifications far beyond the ocean. [Improving Fish Stock Assessments](#) National Academies Press 'Marine Conservation Biology' brings together leading experts from around the world to apply the lessons and thinking of conservation biology to marine issues. The contributors cover what is threatening marine biodiversity and what humans can do to recover the biological integrity of the world's oceans. *Magnuson-Stevens Fishery Conservation and Management Act and Its Relationship to the National Environmental Policy Act* Frontiers Media SA This book is open access under a CC BY-NC 2.5 license. The Gulf of Mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities, including

agricultural, industrial, commercial and coastal development. The Gulf of Mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor, and more recently from oil drilling and production activities located in the water near and far from shore. Major accidental oil spills in the Gulf are infrequent; two of the most significant include the Ixtoc I blowout in the Bay of Campeche in 1979 and the Deepwater Horizon Oil Spill in 2010. Unfortunately, baseline assessments of the status of habitats and biota in the Gulf of Mexico before these spills either were not available, or the data had not been systematically compiled in a way that would help scientists assess the potential short-term and long-term effects of such events. This 2-volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the Gulf of Mexico before the Deepwater Horizon Oil Spill. Volume 2 covers historical data on commercial and recreational fisheries, with an analysis of marketing trends and drivers; ecology, populations and

risks to birds, sea turtles and marine mammals in the Gulf; and diseases and mortalities of fish and other animals that inhabit the Gulf of Mexico.

**Habitats and Biota of the Gulf of Mexico: Before the Deepwater Horizon Oil Spill**

National Academies Press  
This book explores in detail threats to the world's sea turtle population to provide sound, scientific conclusions on which dangers are greatest and how they can be addressed most effectively. Offering a fascinating and informative overview of five sea turtle species, the volume discusses sea turtles' feeding habits, preferred nesting areas, and migration routes; examines their status in U.S. waters; and cites examples of conservation measures under way and under consideration.

**Assessment Approaches to Support Bycatch Management for Marine Mammals**

Aspen Publishing  
The Texas Landscape Project explores conservation and ecology in Texas by presenting a highly visual and deeply researched view of the widespread changes that have affected the state as

its population and economy have boomed and as Texans have worked ever harder to safeguard its bountiful but limited natural resources. Covering the entire state, from Pineywoods bottomlands and Panhandle playas to Hill Country springs and Big Bend canyons, the project examines a host of familiar and not so familiar environmental issues. A companion volume to The Texas Legacy Project, this book tracks specific environmental changes that have occurred in Texas using more than 300 color maps, expertly crafted by cartographer Jonathan Ogren, and over 100 photographs that coalesce to fashion a broad portrait of the modern Texas landscape. The rich data, compiled by author David Todd, are presented in clearly written yet marvelously detailed text that gives historical context and contemporary statistics for environmental trends connected to the land, water, air, energy, and built world of the second-largest and second-most populated state in the nation. An engaging read for any environmentalist or conscientious citizen, The Texas Landscape

Project provides a true sense of the grand scope of the Lone Star State and the high stakes of protecting it. To learn more about The Meadows Center for Water and the Environment, sponsors of this book's series, please [click here](#).

[The Sandbar](#) Texas A&M University Press

A comprehensive account of deep-sea fishes, covering evolution, ecology and the potential threats posed by the growing fishing industry. [World Ocean Assessment](#) Oxford University Press  
Ocean harvests have plateaued worldwide and many important commercial stocks have been depleted. This has caused great concern among scientists, fishery managers, the fishing community, and the public. This book evaluates the major models used for estimating the size and structure of marine fish populations (stock assessments) and changes in populations over time. It demonstrates how problems that may occur in fisheries data—“for example underreporting or changes in the likelihood that fish can be caught with a given type of gear”—can seriously

degrade the quality of stock assessments. The volume makes recommendations for means to improve stock assessments and their use in fishery management. Federal Register Cambridge University Press

The seafood processing industry produces a large amount of by-products that usually consist of bioactive materials such as proteins, enzymes, fatty acids, and biopolymers. These by-products are often underutilized or wasted, even though they have been shown to have biotechnological, nutritional, pharmaceutical, and biomedical applications. For example, by-products derived from crustaceans and algae have been successfully applied in place of collagen and gelatin in food, cosmetics, drug delivery, and tissue engineering. Divided into four parts and consisting of twenty-seven chapters, this book discusses seafood by-product development, isolation, and characterization, and demonstrates the importance of seafood by-products for the pharmaceutical, nutraceutical, and

biomedical industries. U.S. West Coast Fisheries for Highly Migratory Species, Fishery Management Plan DIANE Publishing

The technological advances of the last twenty years have brought huge advances in our understanding of the deep sea and of the species inhabiting this elusive and fascinating environment. Synthesising the very latest research and discoveries, this is a comprehensive and much-needed account of deep-sea fishes. Priede examines all aspects of this incredibly diverse group of animals, reviewing almost 3,500 species and covering deep-sea fish evolution, physiology and ecology as well as charting the history of their discovery from the eighteenth century to the present day. Providing a global account of both pelagic and demersal species, the book ultimately considers the effect of the growing deep-sea fishing industry on sustainability. Copiously illustrated with explanations of the deep-sea environment, drawings of fishes and information on how they adapt to the deep, this is an essential resource for

biologists, conservationists, fishery managers and anyone interested in marine evolution and natural history.

These are the WTO's authorized and paginated reports in English. They are an essential addition to the library of all practising trade lawyers and a useful tool for students and academics worldwide working in the field of international economic or trade law.

DSR 2019: Volume III contains the panel and Appellate Body reports on 'United States - Measures Concerning the Importation, Marketing and Sale of Tuna and Tuna Products (WT/DS381), Recourse to Article 21.5 of the DSU by the United States', 'Second Recourse to

Article 21.5 of the DSU by Mexico'.

*Managing the Nation's Bycatch* Cambridge University Press

This United Nations report examines the current state of knowledge of the world's oceans, for policymakers, and provides a reference for marine science courses.

*Marine Fisheries Review* Ballantine Books

Ocean and Coastal Resources Law is a topical and up-to-date resource for those interested in marine law and policy and the land uses near marine areas, and how they interact. Ocean and Coastal Resources Law, 4e, provides an interdisciplinary approach that combines cases and materials with key sources from science, economics, and business. Ocean and Coastal Resources Law prepares students for practice as lawyers in a variety of fields, such as conservation and marine protection, oil and gas and renewable energy development, coastal land use, real estate, development, and work in nongovernmental organizations and federal and state regulatory agencies. The Fourth Edition adds updated materials related to the

rapidly developing law of climate adaptation, e.g., fisheries regulation as fish populations relocate, and the regulation of coastal structure protection as sea levels rise. New to the Fourth Edition: Coverage of domestic and international ocean law, protected marine species, and off-shore industrial development Updated materials on renewable energy and aquaculture In-depth treatment of the Deepwater Horizon disaster. A holistic view of how activities on the seas affect coastal land activities, and vice versa Updates throughout Coastal Law chapters through 2023 New points for discussion Refreshed problem exercises Professors and students will benefit from: Coverage of domestic and international ocean law--richly illustrated and accessibly written The back-to-back organization of Ocean Law and Coastal Law chapters may be easily adapted to syllabi on Ocean Law, Coastal Law, or Ocean and Coastal Law courses Interdisciplinary materials from law, science, economics, and business inform and add perspective to a range of subjects--such as conservation, land use,

and industry regulation--preparing students for careers as lawyers in a variety of fields Points for discussion highlight connections between cases and topics and raise questions that encourage students to articulate a response to issues of law and policy

*Seafood Processing By-Products* Springer Science & Business Media

Fluctuations and declines in marine fish populations have caused growing concern among marine scientists, fisheries managers, commercial and recreational fishers, and the public. Sustaining Marine Fisheries explores the nature of marine ecosystems and the complex interacting factors that shape their productivity. The book documents the condition of marine fisheries today, highlighting species and geographic areas that are under particular stress. Challenges to achieving sustainability are discussed, and shortcomings of existing fisheries management and regulation are examined. The volume calls for fisheries management to adopt a broader ecosystem perspective that encompasses all relevant environmental and human

influences. Sustaining Marine Fisheries offers new approaches to building workable fisheries management institutions, improving scientific data, and developing management tools. The book

recommends ways to change current practices that encourage overexploitation of fish resources. It will be of special interest to marine policymakers and ecologists, fisheries

regulators and managers, fisheries scientists and marine ecologists, fishers, and concerned individuals.
