NUTRITIONAL REQUIREMENTS OF PERITONEAL DIALYSIS

Nutritional Requirements Of Peritoneal Dialysis
Peritoneal dialysis also removes some vitamins from your body. Your health care provider may prescribe a vitamin and mineral supplement designed specifically for people with kidney failure. Warning: Never take vitamin and mineral supplements you can buy over the counter (OTC).
Eating & Nutrition for Peritoneal Dialysis |

NIDDK Dietary protein intake (DPI) • The recommended dietary protein intake for peritoneal dialysis patients is 1.2-1.3 g/kg body weight/day (K/DOQI). • Nitrogen balance studies have shown that DPI of 1.2 g/kg/day or greater is almost always associated with neutral or positive nitrogen balance.
NUTRITIONAL REQUIREMENTS OF PERITONEAL DIALYSIS
Nutrition and Peritoneal Dialysis. As a patient beginning peritoneal dialysis treatments, you are adjusting to many changes in your daily life. Your healthcare professional has probably told you that some changes in your diet will be necessary.
Nutrition and

Peritoneal Dialysis | National Kidney Foundation
When you first start peritoneal dialysis, you may have difficulty eating well and getting enough calories. For a while, the dialysis solutions may give you a sense of fullness in your stomach. Eating smaller meals five or six times a day can provide the calories you need during the first weeks on peritoneal dialysis.

Nutrition and Peritoneal Dialysis - UNC Kidney Center
Protein requirements are higher because protein is lost through the peritoneal membrane. Due to this protein loss, your dietitian will likely instruct you to eat more protein. Patients on PD are at risk for infection, so a diet with adequate protein is needed to keep the body strong.

The Peritoneal Dialysis Diet - DaVita
High levels of potassium

can cause your heart to beat rapidly, or even stop beating. Low potassium levels can also impact your heart beat. Daily peritoneal dialysis removes some potassium. Ask your Dietitian how you can maintain healthy potassium levels.

General Nutrition Guidelines for Peritoneal Dialysis
weight on peritoneal dialysis. The dialysis fluid used for exchanges contains a sugar called dextrose. Solutions that contain more dextrose help to remove extra fluid from your blood. However, dextrose is an extra source of calories for the body and can lead to unwanted weight gain. And if you have diabetes, the extra sugar

NUTRITION AND PERITONEAL DIALYSIS
End-stage renal disease (ESRD) is the end result of many forms of CKD. It is characterized by severely limited

kidney function that is insufficient to maintain life. Thus, most patients with ESRD require renal replacement therapy via hemodialysis, peritoneal dialysis, or kidney transplantation. End-Stage Renal Disease | Nutrition Guide for Clinicians There is a high prevalence of nutritional disorders in maintenance hemodialysis patients. This fact has been recently confirmed because larger routine assessments of MHD patients body composition are now performed. Food records and dietary interviews show spontaneous low intakes of protein and energy in many patients. An increasing dialysis dose above a Kt/V (single pool) of 1.5 may not improve ... UpToDate Nutritional Costs and Benefits of Peritoneal Dialysis Peritoneal dialysis is a treatment that can incur nutritional costs yet provide some benefits, depending on the individual. It has been established that PD leads to the absorption of glucose, the calorific value of which can range from 300 to 450 kcals per day depending on the type of PD undertaken, dwell time, and peritoneal membrane transport status (7).
