The Art of Southwest Landscaping is the second in a series on landscaping in the desert regions of the Southwest. It is dedicated to the wide variety of delightful desert accents, cacti, groundcovers, ornamental grasses, palms, shrubs, succulents, trees and vines that can beautify landscapes. The author, Dawn Layna Fried, has included a broad selection of plant species that she has used in her own practice as a landscape designer over the past 30 years. Dawn Layna Fried, also an avid plant photographer, has always been passionate about creating magnificent, outdoor living spaces using a variety of color and greenery. She has spent years designing and installing award-winning landscapes for her company, Horticulture Unlimited Inc, in Tucson, Arizona. Each of the plant species listed in this book have been used by Dawn to create unforgettable Southwest landscapes. Stunning photographs accompany each species. The author hopes her book will be the inspiration for you to create unimaginable gardens in your own backyard. The Art of Southwest Landscaping will educate longtime desert dwellers and newcomers alike about the variety of amazing landscape plants available today for small and large gardens. The book includes specific plant suggestions for a variety of landscapes, along with detailed characteristics and special features, such as flower color, fragrance, texture and uses for shade, sun or to attract butterflies. It also identifies the genus and species for each plant with detailed resources on how to keep plants healthy.

Sunlight Hibernation for Cactus Protecting Your Cactus in the Winter Planting Your Cactus Offsets How to grow Cacti from Cuttings Cactus as Food Diseases and pests Appendix Cactus clubs Author Bio Introduction For all those people who have confronted a prickly pear, at least once in their lives, cacti are boring spiny plants. Also, cactus plants have long been the subject of a superstition that any house, which has cactus growing in it is going to be filled up with strife and trouble and arguments. That is because of the spines of the cactus which are known as spikes promote ill feeling. There is something so odd about a cactus plant that it is often difficult until you grow them yourself to believe that these really belong to the plant kingdom. Historically, how many pioneer explorers of the desert areas in America saw them in the twilight and thought stories of monsters with their arms outstretched, and no heads, who turned into plants in the desert in the morning. No wonder, these giants which can grow up to 63 feet have always been the subject for legends. Even today, most of us are told tales about the cactus, which many of us half believe. Some of us have heard that cacti are poisonous. Other people are going to tell us that cacti flower only once in 100 years, and only when the area is subjected to rain. The first tale is totally and true. The second tale is also untrue because certain species of cacti will flower, almost every year, if given proper cultivation and care. Cactuses, also known as cacti belong to the family Opuntiaceae. Many of these plant varieties have lost true leaves, but they still have fluted and ribbed stems. The stems store water, and many of the desert varieties have very short growing time periods. Their periods of dormancy may be long, because many times, they have to go without water and rainfall for years, especially when they are growing in the Atacama Desert. Cactus originally are natives of the Americas, except for some species, which grow in Africa.
