fictional cases which represent a range of human experiences, featuring people of different ages, ethnicities, genders, ability levels, and religions. Each disorder has several cases associated with it to capture the truly unique nature of working with various client intersections, and half of the cases provide the correct "answers" or diagnosis to allow students to check their understanding of this process. Some cases focus on a diagnosis, others with analysis, and others let the student practice on their own as a way to further student reflection and learning. This casebook is specifically written for disciplines that are grounded in a humanistic approach (Counseling, Social Work, Counseling Psychology). The author provides a framework for using the medical model that is presented in the DSM-5.

The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or

delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families,

researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

Kinn's The Medical Assistant - E-Book Elsevier Health Sciences This book, specifically designed to meet the needs of those teaching and learning interviewing and diagnostic skills in clinical, counseling and school psychology, counselor education, and other programs preparing mental health professionals, offers a rich array of practical, hands-on, class- and workshop-tested role-playing and didactic exercises. The authors, who bring to their task a combined 31 years of practice and 24 years of teaching these skills, present 20 complex

profiles of a broad range of clients--adults, teens, and children; differing in ethnicity, gender, religion, socioeconomic status, presenting problems, and problem severity. The profiles provide students/trainees with a wealth of information about each client's feelings, thoughts, actions, and relationship patterns on which to draw as they proceed through the different phases of the intake/initial interview, one playing the client and one the interviewer. Each client profile is followed by exercises, which can also be assigned to students not participating in role-playing who have simply read the profile. The profiles are detailed enough to support a focus on whatever interviewing skills an instructor particularly values. However, the exercises highlight attending, asking open and closed questions, engaging in reflective listening, responding to nonverbal behavior, making empathetic comments, summarizing, redirecting, supportively confronting, and commenting on process. The authors' approach to DSM-IV diagnoses encourages students to develop their diagnostic choices from

Axis I to Axis V and then thoughtfully review them in reverse order from Axis V to Axis I to ensure that the impacts of individual, situational, and biological factors are all accurately reflected in the final diagnoses. Throughout, the authors emphasize the importance of understanding diversity and respecting the client's perceptions--and of reflecting on the ways in which the interviewer's own identity influences both the process of interviewing and that of diagnosis. Interviewing and Diagnostic Exercises for Clinical and Counseling Skills Building will be welcomed as a invaluable new resource by instructors, students, and trainees alike.
