This book offers a comprehensive introduction to novel absorption heating technologies for improving the energy efficiency of heating systems. The proposed low-temperature heating systems, based on an air source absorption heat pump (ASAHP),

significantly increase heating efficiency and reduce pollution emissions. As the performance of ASAHPs deteriorates at lower ambient/driving temperatures, a series of advanced cycles is used to extend their applicability, with the compression-assisted ASAHP being the most outstanding example. The book discusses the generator-absorber-heat-exchange ASAHP as a promising solution to make the best of high driving temperatures, an aspect that can be improved further via compression. Further, it addresses the ground source absorption heat pump (GSAHP), which eliminates the soil thermal imbalance of the conventional ground source electrical heat pump (GSEHP), and also reduces the number of boreholes. Various hybrid GSAHP systems are proposed to further enhance applicability, efficiency, and economy: these include a combined GSAHP and GSEHP system, as well as ASAHP and GSAHP systems that incorporate design optimizations. In closing, the book explores the merits of novel working fluids and highlights recent advances concerning waste heat and renewable energy utilization.

leading up to the Civil War reveal a country divided by more than just a belief in, or revulsion of, slavery. It reveals a country still forming, even as it fissures and breaks apart. It reveals an industrial north and an agricultural south evolving into enemies

even as they mutually benefit one another. It reveals politicians playing to their bases, riling up young men especially to take up arms against their fellow countrymen. This astonishing historical work chronicles all this and more, exploring the fractious

ideologies and the most important figures who led the country into its bloodiest conflict.
