From “a genuine American Dostoevsky” (The Washington Post): a dazzling, funny, bittersweet exploration of the mysteries of relationship, both human and animal. When his favorite cat Biscuit goes missing, Peter Trachtenberg sets out to find her. The journey takes him 700 miles and many years into his past-- into the history of his relationships with cats and the history of his relationship with his wife F., who may herself be on the verge of disappearing. What ensues is a work that recalls travel narratives from The Incredible Journey to W. G. Sebald's The Rings of Saturn. Trachtenberg ponders the mysteries of feline intelligence (why do cats score worse on some tests than pigeons?), the origins of their domestication, their terrible treatment during the Middle Ages. He also looks at the riddle of why any of us loves whom we love and all the unforeseen places to

which that devotion leads us.

Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by Michael T. Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to

present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.
